REQUEST FOR EARLY PUBLICATION UNDER 37 CFR § 1.219 AND VOLUNTARY WAIVER OF SECRECY UNDER 35 U.S.C. § 122(a)

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Sir:

Reinaldo Javier Aguiar Marcano, the inventor prosecuting the above-identified patent application Pro Se as Applicant and Petitioner, respectfully requests **Early Publication** of this application under **37 CFR § 1.219** and MPEP § 1129.

Pursuant to 35 U.S.C. § 122(a), Applicant hereby **expressly and voluntarily waives his right to statutory secrecy and confidentiality** in this application. Applicant requests the United States Patent and Trademark Office to publish the complete application, including the specification, drawings, and the entire administrative file wrapper (including all pending petitions and Information Disclosure Statements), and to make the docket immediately accessible to the public via the USPTO Patent Center public database.

The publication fee set forth in **37 CFR § 1.18(d)(1)** (Fee Code: 1504, $0.00) is authorized and applied hereto.

In support of this Request for immediate transparency, Applicant and Petitioner respectfully shows the following:

I. THE PUBLIC AND SOVEREIGN INTEREST OF THE LICENSED ASSET

Confidentiality in pending patent applications under 35 U.S.C. § 122(a) is an administrative privilege established solely for the protection of the inventor's proprietary trade secrets. However, in the instant case, the public interest and the interest of the United States Sovereign heavily outweigh any private interest in confidentiality:

1. **Perpetual Sovereign License:** As explicitly drafted and e-filed within the specification of Hub Application No. 19/559,705 on March 6, 2026, the Applicant has granted a perpetual, royalty-free, non-exclusive license to the United States Government and its agencies to practice and use the invention worldwide for any and all governmental and defense purposes.
2. **Active DFARS 227.7004 Infringement Claims:** This licensed technology is currently the subject of a formal **Administrative Claim for Patent Infringement under DFARS 227.7004** submitted by the Applicant to the Department of Defense.
3. **Public Trust and Transparency:** Because a sovereign representative of the United States public is a direct, perpetual property licensee of this technology, the public has an immediate, vested right to full transparency regarding the existence of the technology, its prosecution history, and the administrative record of the USPTO's processing.

II. COUNTERING COVERT ADMINISTRATIVE OBSTRUCTION

As fully detailed in the companion formal Petition to the Director under 37 CFR § 1.183 e-filed in this application, Applicant is currently subjected to severe, extrajudicial physical restraint (under a void state civil Capias warrant) and systematic postal mail blocks by

private technical adversaries attempting to force the silent, procedural abandonment of this application in private, un-monitored pre-exam processing.

By voluntarily waiving secrecy and requesting **Early Publication**, Applicant invokes the absolute "safety valve" of public transparency. Making the entire file wrapper—including the record of whistleblower disclosures, administrative obstruction, and active Supreme Court of the United States proceedings (Docket No. 26A39)—fully public ensures that all administrative actions in this case occur under complete, public scrutiny. This completely neutralizes any attempt by private adversaries to quietly destroy these federal-interest assets in administrative obscurity.

III. COHESION OF DUAL REQUESTS: PREVENTING COVERT PROCEDURAL ABANDONMENT

To prevent any potential administrative confusion or misperception of a "contradiction" between the instant Request for Early Publication and the parallel Petition to Suspend Prosecution under 37 CFR § 1.103(a) e-filed herewith, Applicant formally establishes the legal and procedural harmony of these dual filings:

1. **Active Prosecution requires Bilateral Capacity:** Active patent prosecution is a bilateral legal exchange of pleadings and amendments with strict statutory deadlines. Due to Applicant's physical restraint under a state-court Capias and the systematic block of his postal mail, Applicant is currently physically incapacitated from safely participating in this active legal exchange. Therefore, a temporary **Suspension of Action under 37 CFR § 1.103(a)** is procedurally necessary to freeze the prosecution clocks and prevent automatic, involuntary abandonment.

2. **Publication is a Passive Administrative Broadcast:** Conversely, publication under 37 CFR § 1.219 is a passive, unilateral administrative act. It requires absolutely no active participation, responses, or defenses from the Applicant. It does not start any active prosecution clocks.

3. **The Harmony of the "Transparency Shield":** Therefore, the dual requests are entirely cohesive. Applicant is physically incapacitated from safely engaging in the private, active legal battle of **prosecution** right now, but Applicant demands that the

entire record of this federal-interest asset be made completely **public** to prevent covert, administrative sabotage by adverse parties. The request for a suspension protects the application from procedural decay, while the request for early publication establishes the protective shield of public transparency.

IV. PRAYER FOR RELIEF

WHEREFORE, Applicant and Petitioner respectfully prays that the USPTO:

1. Accept this voluntary waiver of confidentiality under 35 U.S.C. § 122(a);
2. Grant this Request for Early Publication under 37 CFR § 1.219;
3. Publish this application as soon as possible and transfer the complete file wrapper, including all pending petitions, immediately from "Private View" to "Public View" in the Patent Center database; and
4. Set the publication fee to $0.00 in accordance with Fee Code 1504.

Respectfully submitted,

/Reinaldo Javier Aguiar Marcano/
