Reinaldo Javier AGUIAR MARCANO			
3. SSN/EIN	4. Taxpayer's business phone	5. Taxpayer's home phone	6. Representative's phone
[redacted]	(646) 299-5724	(832) 422-5937	

7. Taxpayer's street address
2302 Britton Ridge Drive

8. City	9. State	10. ZIP code
Katy	TX	77494
11. Type of tax *(tax form)*	12. Tax periods being appealed	13. Tax due
Income Tax - Form 1040	12/31/2024	76,636.42

Collection Action(s) Appealed

14. Check the Collection action(s) you are appealing

- ☐ Federal Tax Lien
- ☒ Levy or Proposed Levy
- ☐ Seizure
- ☐ Rejection of Installment Agreement
- ☐ Termination of Installment Agreement
- ☐ Modification of Installment Agreement

Explanation

15. Explain why you disagree with the collection action(s) you checked above and explain how you would resolve your tax problem. Attach additional pages if needed. Attach copies of any documents that you think will support your position. Generally, the Internal Revenue Service Independent Office of Appeals will ask the Collection Function to review, verify and provide their opinion on any new information you submit. We will share their comments with you and give you the opportunity to respond

I respectfully appeal the proposed collection/levy of $76,636.42 for the 2024 tax period because it represents an erroneous duplicate penalty. My underlying 2024 tax liability has already been paid in full (see attached transaction proof). I believe a manual '18H' Error Resolution System operator override mistakenly duplicated this assessment, creating a false balance on my account. As a registered federal whistleblower under active TIGTA investigation (Project 2026200004) regarding unauthorized account compromise (UNAX), I have previously submitted Form 13909 and Form 911 (Taxpayer Advocate Service). Additionally, I am currently subject to constructive office confinement under a void state-court Capias order that is under active review by the Supreme Court of the United States (In Re Aguiar Marcano, No. 26-186). Seizing my accounts would disrupt the Supreme Court's prospective jurisdiction on the eve of my September 28, 2026, conference.

Proposed Resolution: Immediately stay all collection actions and refer this matter to the Taxpayer Advocate Service (TAS) and TIGTA for a manual audit of the '18H' override to verify my prior payment and correct my account balance.

Under penalties of perjury, I declare that I have examined this request and any accompanying documents, and to the best of my knowledge and belief, they are true, correct and complete. A submission by a representative, other than the taxpayer, is based on all information of which the representative has any knowledge.

16. ☒ Taxpayer's or ☐ Authorized Representative's signature *(only check one box)*	17. Date signed
Reinaldo Aguiar	09/14/2026

IRS USE ONLY

Instructions for Form 9423, Collection Appeal Request

For Liens, Levies, Seizures, and Rejection, Modification or Termination of Installment Agreements

A taxpayer, or third party whose property is subject to a collection action, may appeal the following actions under the Collection Appeals Program (CAP):

a. Levy or seizure action that has been or will be taken.
b. A Notice of Federal Tax Lien (NFTL) that has been or will be filed.
c. The filing of a notice of lien against an alter-ego or nominee's property.
d. Denials of requests to issue lien certificates, such as subordination, withdrawal, discharge or non-attachment.
e. Rejected, proposed for modification or modified, or proposed for termination or terminated installment agreements.
f. Disallowance of taxpayer's request to return levied property under IRC 6343(d).
g. Disallowance of property owner's claim for return of property under IRC 6343(b).

How to Appeal If You Disagree With a Lien, Levy, or Seizure Action

1. If you disagree with the decision of the IRS employee, and wish to appeal, you must first request a conference with the employee's manager. If you do not resolve your disagreement with the Collection manager, submit Form 9423 to request consideration by Appeals. Let the Collection office know within two (2) business days after the conference with the Collection manager that you plan to submit Form 9423. The Form 9423 must be received or postmarked within three (3) business days of the conference with the Collection manager or collection action may resume.

   Note: If you request an appeal after IRS makes a seizure, you must appeal to the Collection manager within 10 business days after the Notice of Seizure is provided to you or left at your home or business.

2. If you request a conference and are not contacted by a manager or his/her designee within two (2) business days of making the request, you can contact Collection again or submit Form 9423. If you submit Form 9423, note the date of your request for a conference in Block 15 and indicate that you were not contacted by a manager. The Form 9423 should be received or postmarked within four (4) business days of your request for a conference as collection action may resume.
3. On the Form 9423, check the collection action(s) you disagree with and explain why you disagree. You must also explain your solution to resolve your tax problem. Submit Form 9423 to the Collection office involved in the lien, levy or seizure action.
4. In situations where the IRS action(s) are creating an economic harm or you want help because your tax problem has not been resolved through normal channels, you can reach the Taxpayer Advocate Service at 877-777-4778.

How to Appeal An Installment Agreement Which Has Been Rejected, Proposed for Modification or Modified, or Proposed for Termination or Terminated

1. If you disagree with the decision regarding your installment agreement, you should appeal by completing a Form 9423, Collection Appeal Request.
2. You should provide it to the office or revenue officer who took the action regarding your installment agreement, within 30 calendar days.

   Note: A managerial conference is not required. However, it is strongly recommended a conference be held with the manager whenever possible.

   Important: Never forward your request for an Appeals conference directly to Appeals. It must be submitted to the office which took the action on your installment agreement.

What Will Happen When You Appeal Your Case

Normally, we will stop the collection action(s) you disagree with until your appeal is settled, unless we have reason to believe that collection or the amount owed is at risk.

You May Have a Representative

You may represent yourself at your Appeals conference or you may be represented by an attorney, certified public accountant or a person enrolled to practice before the IRS. If you want your representative to appear without you, you must provide a properly completed Form 2848, Power of Attorney and Declaration of Representative. You can obtain Form 2848 from your local IRS office, by calling 1-800-829-3676, or by going to www.irs.gov.

Decision on the Appeal

Once Appeals makes a decision regarding your case, that decision is binding on both you and the IRS. You cannot obtain a judicial review of Appeals' decision following a CAP. However, there may be other opportunities to obtain administrative or judicial review of the issue raised in the CAP hearing. For example, a third party may contest a wrongful levy by filing an action in district court. See Publication 4528, Making an Administrative Wrongful Levy Claim Under Internal Revenue Code (IRC) Section 6343(b).

Note: Providing false information, failing to provide all pertinent information or fraud will void Appeals' decision.

Refer to Publication 594, The IRS Collection Process, and Publication 1660, Collection Appeal Rights, for more information regarding the Collection Appeals Program. Copies of these publications can be obtained online at www.irs.gov.

Privacy Act

The information requested on this Form is covered under Privacy Acts and Paperwork Reduction Notices which have already been provided to the taxpayer.

Attn: Appeals Officer / Collection Appeals Program (CAP)

SUPPORTING STATEMENT ATTACHED TO IRS FORM 9423 (COLLECTION APPEALS REQUEST)

Taxpayer: Reinaldo J. Aguiar Marcano — TIN: XXX-XX-2502 — Caller ID: 188337
Tax Period Ending: December 31, 2024 (Tax Year 2024)
Subject: Appeal of Notice CP504 (Dated August 10, 2026) – Notice of Intent to Levy

Dear Appeals Officer,

I am formally submitting this Supporting Statement in connection with my completed **Form 9423 (Collection Appeals Request)** to respectfully appeal the proposed levy of **$76,636.42** set forth in IRS Notice CP504, dated August 10, 2026. I respectfully request an immediate administrative stay of all collection and levy actions pending a thorough, manual review of my account. As demonstrated below, the disputed balance is the result of an administrative duplicate assessment that has already been paid in full, compounded by active whistleblower retaliation and procedural obstacles that prevent my physical attendance at a local IRS facility.

I. Executive Summary of Account Discrepancy and Duplicate Assessment

The disputed amount of **$76,636.42** (consisting of a principal assessment of $75,067.62 and accrued interest of $1,568.80) does not represent a valid outstanding liability. The underlying tax liability for the 2024 tax period has already been paid in full. Specifically, the IRS's own official Notice CP14, issued to me in April 2026, formally documents and confirms my total payment of **$442,531.00** in taxes and satisfied penalties for Tax Year 2024 **(attached hereto as Exhibit E)**.

I believe a manual **"18H" Error Resolution System (ERS) operator override** was applied to my account, which mistakenly duplicated a penalty assessment that had already been resolved and satisfied as confirmed in Exhibit E. This manual intervention has manufactured an artificial, non-existent debt that has triggered automated collection notices, culminating in the present Notice CP504. Forcing collection on a fully satisfied account violates my fundamental rights under the Taxpayer Bill of Rights (codified under IRC § 7803(a)(3)), specifically the **Right to Pay No More than the Correct Amount of Tax** and the **Right to Appeal an IRS Decision in an Independent Forum**, particularly when the IRS's own official records in Exhibit E establish prior satisfaction.

II. Protected Whistleblower Status, Unanswered Disclosures, and Demand for Protection

I am a high-profile, protected federal whistleblower under **IRC § 6103** and have filed active, comprehensive disclosures with the IRS Whistleblower Office (Form 211), the Securities and Exchange Commission (SEC) Office of the Whistleblower (**TCR Submission No. 17871-492-823-882**), the Office of Foreign Assets Control (OFAC), and the Treasury Inspector General for Tax Administration (TIGTA).

Specifically, over the last year, I have submitted **multiple formal IRS Whistleblower Reports (Form 211)** directly to the IRS Whistleblower Office. To date, these high-gravity reports detailing systematic multi-trillion dollar tax evasion and racketeering schemes remain completely unanswered. Given that I have filed these disclosures directly with your agency, I hereby formally request and demand immediate federal whistleblower protections under the statutory jurisdiction of the IRS, including an administrative freeze of all adverse collection actions, state refund levies, and asset seizures while these disclosures are actively investigated.

The timing of this collection action is highly irregular and suggests a retaliatory co-optation of the IRS's automated systems:

1. **April 13, 2026:** The IRS Austin/Memphis Service Center issued Notice CP14 demanding the duplicative $75,067.62 assessment, immediately following my filing of administrative claims.

2. **April 14, 2026:** I received a verified warning from a contact within Venezuelan Army Intelligence who correctly identified the exact contents of the CP14 notice *before* it was delivered by the United States Postal Service (USPS). This "Impossible Knowledge" event establishes a catastrophic security breach involving the unauthorized exfiltration (UNAX) of my confidential taxpayer data from the IRS technical substrate to hostile foreign operators.

3. **April 14, 2026:** I submitted a formal **Form 13909 (Referral of Exempt Organizations)** via fax to IRS TEGE Classification, formally reporting the Service Center directors for abuse of official status and administrative fraud.

4. **April 15, 2026:** I formally notified IRS CEO Frank Bisignano and Chief Risk and Control Officer (CRCO) Dottie Romo of this technical compromise and requested an administrative stay of filing. This matter remains under active investigation by TIGTA under **Project 2026200004 (Insider Threat Risks)**.

III. Triple-Layer Public and National Defense Interest

The execution of this erroneous levy threatens a profound national defense interest stemming from my portfolio of 100 patent-pending cryptographic inventions (including U.S. Patent Application No. 19/791,414). As a former Google Staff Engineer and Goldman Sachs Managing Director, I have formally disclosed this technology and its associated liabilities to senior federal leadership. Forced financial disarmament via an erroneous IRS levy actively sabotages these vital federal interests, which are formally documented in my pending Supreme Court Rule 21 Emergency Motion **(attached hereto as Exhibit D)**:

- **Sovereign Defense Licensing (DoD Pete Hegseth):** I have granted a perpetual, royalty-free license to the United States Government for my entire portfolio protecting JADC2/F-35 tactical communication keys, which are under active Department of Defense DFARS 227.7004 Administrative Claims served on June 3, 2026[1].

- **Treasury Disclosures (Treasury Scott Bessent):** Formal regulatory disclosures and trading bar demands were served upon the U.S. Secretary of the Treasury on April 1 and July 1, 2026, appertaining to systemic fiduciary breaches and index-weighted defense prime front-running liabilities.

- **SEC Whistleblower TCR Complaint (SEC Office of the Whistleblower):** An active Securities Fraud Complaint under Form TCR (TCR Submission No. 17871-492-823-882, August 19, 2026) formally targets Goldman Sachs, JPMorgan Chase, and Morgan Stanley for illegal stock buybacks and Regulation S-K omissions while holding actual knowledge of these patent liabilities. This follows formal, cryptographically verified compliance demands served directly upon Michael Schlee and Kathryn Ruemmler of The Goldman Sachs Group, Inc. on June 26, 2026[2].

[1]The entire master portfolio, representing these 100 geocoded and internationally indexed defensive inventions, is preserved in the public interest and available for download at `https://www.isbn9781971481296.com/`.

[2]See *In re Reinaldo J. Aguiar Marcano*, No. 26-186 in the Supreme Court of the United States (filed July 16, 2026), Original Petition for an Extraordinary Writ of Habeas Corpus, Appendix H, Page App. 29a, available on the Court's web portal at: `https://www.supremecourt.gov/DocketPDF/26/26-186/418936/20260814074533144_20260814-073658-00002047-00005165.pdf`.

IV. Impossibility of In-Person Resolution and Supreme Court Jurisdiction

The administrative escalation of this tax account is deeply intertwined with an ongoing constitutional and physical crisis. A related state-court domestic relations proceeding (387th Judicial District Court, Fort Bend County, Cause No. 25-DCV-328122) has been co-opted to execute asset extraction. In that proceeding, a void, unconstitutional civil *Capias* arrest warrant was issued in flagrant violation of a mandatory statutory stay.

Because of this active *Capias* warrant, I have been subjected to **116 consecutive days of constructive confinement** inside my office, physically unable to exit, travel, or visit a local IRS office or federal courthouse without facing immediate roadside arrest under a void state order.

The legality of this physical restraint and the associated state-court due process violations are currently under active review by the **Supreme Court of the United States** in my pending Petition for an Extraordinary Writ of Habeas Corpus, docketed as **Cause No. 26-186, Original**, which has been formally distributed for the Justices' **September 28, 2026 Conference**. Concurrently, my Emergency Motion under Rule 21 to Direct the Clerk to Docket my Motion for Stay is pending before the full Court **(the complete, stamped emergency service pack filed on September 8, 2026, is attached hereto as Exhibit D)**.

Permitting the automated execution of a levy on my bank accounts while I am held under constructive office arrest would completely disarm a *pro se* litigant on the eve of a critical Supreme Court conference. This would represent a severe and irreversible violation of the Fifth Amendment's mandate of **Equality of Arms** and directly interfere with the prospective jurisdiction of the Supreme Court of the United States under 28 U.S.C. § 1651.

V. Requested Resolution and Action Plan

To prevent an irreparable miscarriage of justice and resolve this billing error in a professional, orderly manner, I respectfully request that the Independent Office of Appeals:

1. **Issue an Immediate Temporary Collection Hold:** Place a formal, manual collection freeze on my account (TIN: XXX-XX-2502) to stay all levy actions, passport revocation warnings, and federal tax lien filings under Notice CP504.
2. **Refer the File to TIGTA and CRCO:** Direct the IRS Collection function to coordinate with the Treasury Inspector General for Tax Administration (TIGTA) and Chief Risk Officer Dottie Romo to conduct a manual audit of the "18H" ERS operator override.

3. **Coordinate with the Taxpayer Advocate Service (TAS):** Coordinate directly with TAS under my concurrent emergency request for assistance (**Form 911**), to verify my prior payment **(as documented in Exhibit E)** and correct my account balance.

I declare under penalty of perjury under the laws of the United States of America that the foregoing statements are true and correct.

Respectfully submitted,

Taxpayer Signature: Reinaldo Aguiar

Reinaldo J. Aguiar Marcano

TIGTA Hotline (Project 2026200004: Insider Threat Risks)

RE: TAXPAYER: Reinaldo J. Aguiar Marcano; TIN: XXX-XX-2502; CALLER ID: 188337; URGENT PETITION FOR ADMINISTRATIVE STAY OF FILING REQUIREMENT AND APPLICATION FOR AUTOMATIC EXTENSION (FORM 4868) FOR TAX YEAR 2025.

To the Attention of Federal Leadership and the Risk Management Division:

Enclosed please find **Form 4868**, which constitutes my automatic application for an extension to file my Tax Year 2025 return until October 15, 2026. However, given the extraordinary circumstances of **Administrative Sabotage** and **Foreign Intelligence Compromise** documented in my previous letter of April 14, 2026, I am formally requesting a **discretionary administrative stay** of all filing requirements until the Treasury Inspector General for Tax Administration (TIGTA) and the DOGE Subcommittee conclude their investigation into the active security breaches of my taxpayer account.

I. Basis for Request: Whistleblower Retaliation and RICO Escalation

I am a protected whistleblower under **IRC § 6103** and have filed comprehensive Reports and Disclosures with the **IRS Whistleblower Office (Form 211)**, **FinCEN**, the **SEC (TCR 17742-648-351-976)**, and **OFAC (OFACDisclosure-01309)** regarding a multi-trillion dollar RICO enterprise.

The sequence of administrative actions against me confirms that the entities I have reported are weaponizing the IRS's automated systems to retaliate:

1. **December 29, 2025:** Issuance of Notice **CP59** asserting non-filing status despite my prior filing compliance and full payment.
2. **April 13, 2026:** Issuance of Notice **CP14** demanding a duplicative $75,067.62 assessment, utilizing a manual **"18H" Error Resolution System (ERS)** override to manufacture a debt designed to trigger an automated bank account freeze.

II. Notification of Critical Security Breach (UNAX)

On April 14, 2026, I received a verified warning from an informant within the **Venezuelan Army Intelligence** who correctly identified the contents of the CP14 notice before it could have been delivered by the USPS [1]. This "Impossible Knowledge" event provides concrete evidence that my confidential return information has been exfiltrated from the IRS Austin/Memphis technical substrate to foreign intelligence operatives and the target entities of my whistleblowing [3, 1].

III. Demand for Stay of Filing Pending Investigation

Requiring me to submit a TY 2025 return while my account is under active **UNAX (Unauthorized Access of Taxpayer Account)** compromise constitutes a violation of the **Taxpayer Bill of Rights** and endangers both my personal safety and national security. I cannot in good faith provide sensitive financial data to an agency that is currently failing to manage its **"Insider Threat Risks" (TIGTA Project 2026200004)**.

I demand an administrative stay of the filing requirement for TY 2025 until:

1. The Chief Risk and Control Officer (Dottie Romo) certifies that the technical compromise of my account has been mitigated.
2. TIGTA concludes its forensic audit of the manual intervention associated with the **18H code** and operator override.

III. Formal Notification of Systemic Failure: Technical Inoperability of TIGTA Reporting Infrastructure

I formally advise the Office of the CEO and the Risk and Control Officer that the TIGTA digital reporting infrastructure, specifically the “Submit a Report” portal, has been inoperative during a critical 48-hour window (April 14–15, 2026) . The portal currently displays a notice stating that “*TIGTA’s previous website is temporarily unavailable*” and redirects users to an interim informational page .

Crucially, the "Submit a Report" interface remains trapped in a redirection loop, offering no mechanism for the formal digital submission of complaints or the secure uploading of evidentiary documentation. By removing the capacity for secure document transmission and mandating telephonic communication, the system imposes a significant **administrative deterrent** upon federal whistleblowers. This technical impediment prevents the timely submission of the hard documentation necessary to corroborate the complex racketeering activities reported herein.

This represents a catastrophic failure of TIGTA’s oversight mission, occurring precisely during the statutory tax filing deadline—the moment of maximum vulnerability for whistleblowers being targeted by the RICO enterprise described in Declaration D132. Please see **"Attachment 2"** for a forensic record of the generic error message and the resulting blockage of this critical oversight channel.

I have fulfilled my statutory obligation by filing the automatic Form 4868. I now place the burden on the IRS to secure its systems before demanding further sensitive disclosures from a high-level federal whistleblower.

Respectfully,

s/Reinaldo Aguiar Marcano/

Reinaldo J. Aguiar Marcano

To the Attention of the Service Center Director:

This letter constitutes a formal dispute and administrative protest regarding Notice CP14, dated April 13, 2026, issued to Reinaldo J. Aguiar Marcano. The assessment contained in this notice is factually erroneous, procedurally defective, and indicative of a profound

breakdown in the Internal Revenue Service's data integrity protocols.

I. Factual Discrepancy and Procedural Defiance

Notice CP14 asserts a balance due of $75,067.62 for the 2024 tax year. However, the IRS's own billing summary in said notice acknowledges that $442,531.00 in payments and credits have been applied to this account. The taxpayer filed his 2024 return with a total liability of $431,263.00—an amount calculated using IRS-approved software that explicitly included all applicable late penalties and interest. Consequently, the IRS's own data demonstrates that the taxpayer has overpaid his liability, yet the agency continues to demand an additional **$75,067.62** based on duplicative and unexplained penalty assessments.

Furthermore, on December 29, 2025, the IRS issued Notice CP59 claiming that the taxpayer had not filed a return. The sudden issuance of Notice CP14 contradicts this status without providing the taxpayer with a math error notice, a report of income tax examination changes, or a Statutory Notice of Deficiency (90-day letter) in violation of 26 U.S.C. § 6212. The agency has bypassed the taxpayer's right to appeal this assessment to the U.S. Tax Court before a demand for payment was generated, in direct violation of 26 U.S.C. § 6212 and § 6213.

It is also noteworthy the fact that the payment of $442,531.00 was submitted and completed in November 2025, more than a month before the 12/29/2025 Notice CP59 "Return Not Filed" was even printed. This proves that the IRS's billing summary is fundamentally out of sync with its own ledger.

The billing summary in **Exhibit B** confirms that the $442,531.00 payment was processed, yet the IRS remained in '**Unpostable Status**' for over a month (from November 2025 to at least December 29 2025).

Since the later billing summary of April 13, 2026 confirms the payment was processed, the assessment of $70,739.10 in penalties *after* the account was in a credit status is a statutory impossibility under IRC § 6651.

Notice CP14 additionally fails to acknowledge the credit balance of $11,268.00 created by

the self-assessment of $431,263.00 and states additional charges for “penalties” and “interests” on 12/15/2025 for the amount of $10,677.60 although the payment had already been made the prior month.

These critical omissions and discrepancies warrant an investigation, especially in light of:

i) the presence of the '18H' internal code on Notice CP14 of April 13, 2026 confirming a manual intervention by an ERS (Error Resolution System) technician;

and

ii) the Whistleblower-taxpayer had filed reports with FinCEN, OFAC, the SEC and IRS Whistleblower offices less than two weeks prior to the issuance of Notice CP14 of April 13, 2026.

The "Unpostable Status" Between November 2025 and December 29, 2025 due to a systemic failure to credit the 2024 ledger

Since the $442,531.00 payment was withdrawn **before the CP59 was even printed**, the CP59 proves the IRS system was in a state of **"Master File Desynchronization,"** and the current **$75,067.62** demand is a result of the agency failing to issue a **Statutory Notice of Deficiency (90-day letter)** before increasing assessments beyond the self-reported liability, and, failing to notify taxpayer of the increase and explain the math behind said increase.

II. The Notice CP14 Violates the Taxpayer Bill of Rights

Your Notice CP14 of April 13, 2026 violates the **Taxpayer Bill of Rights**, specifically the "Right to be Informed" and "Right to a Fair and Just Tax System", by demanding payment on penalties and interests already paid and not providing any justification, notice of changes to the underlying return, or even the math behind the demand for payment.

The failure to provide line-item computations violates the transparency standards established by the Taxpayer Bill of Rights ('Right to be Informed').

III. Notification of Counterintelligence Compromise and "Impossible Knowledge"

This dispute is not limited to mathematical error but involves a grave concern regarding the security of taxpayer data. On April 14, 2026—less than 24 hours after Notice CP14 was printed and before it could possibly have been delivered via mail—the taxpayer received a warning from a source within the Venezuelan Army Intelligence. This source correctly identified that a retaliatory IRS action was imminent, designed to silence the taxpayer's whistleblowing activities regarding intellectual property theft. The taxpayer is a whistleblower that has submitted reports to the IRS via IRS form 211 and to the OFAC, for example, please see **"Exhibit D"** related to **OFACDisclosure-01309**.

The retaliatory actions described herein, not only directly violate **IRC § 6103** (Confidentiality and Disclosure of Returns) and **IRC § 7431** (Civil Action for Unauthorized Disclosure), but worse, they use the IRS itself as an instrument of retaliation.

The Motive and Intent

The **mathematical error** of charging $75k despite overpayment is the *mechanism* used by the RICO enterprise to trigger the automated freeze of the whistleblower accounts. This is precisely the mechanism of retaliation to silence the whistleblower-taxpayer.

The Whistleblower-taxpayer subsequently verified this information by logging into the IRS portal, where he found the notice. This "impossible knowledge" event constitutes a documented security incident at a minimum warrants an investigation of whether foreign intelligence operatives have real-time access to the IRS's internal notice-generation and enforcement workflows. This breach of taxpayer privacy is consistent with the allegations detailed in the attached Declaration D132, which describes a transnational RICO enterprise weaponizing federal agencies against dissenting innovators.

IV. Demand for Immediate Administrative Action

Given the due process violations and the national security implications of this case, we demand the following immediate administrative responses:

1. **Administrative Stay under the Taxpayer First Act.:** Due to my status as a protected whistleblower under **IRC § 6103** (Confidentiality and Disclosure of Returns) and **IRC § 7431** (Civil Action for Unauthorized Disclosure), any automated levy or lien prior to a full investigation of the "Impossible Knowledge" event constitutes unlawful retaliation by a federal agency. I request an immediate suspension of all automated collection activities, including liens and levies, pending the full resolution of this dispute. Please note I am concurrently filing Form 911 (Request for Taxpayer Advocate Service Assistance) to prevent significant hardship and systemic failure. My Form 911 submission is attached as **Exhibit E**.

2. **Audit Reconsideration:** A comprehensive re-evaluation of the 2024 assessment under the "Audit Reconsideration" process (Form 12661), utilizing the proof of payment of $442,531.00.[15]

3. **Explanation of Assessment:** A detailed itemization of the specific Internal Revenue Manual (IRM) authorities and mathematical justifications used to derive the duplicative $70,739.10 in penalties despite the overpayment on the account. The '**18H**' internal code on Notice CP14 confirms a manual intervention by an ERS (Error Resolution System) technician. **I demand the identification of the operator and the 'Action Trail' associated with this manual override as part of the TIGTA Log Correlation Audit** and the disclosure to me, in writing, of the Operator ID associated with the **18H code** override.

4. **TIGTA Referral:** I demand an immediate investigation into **UNAX (Unauthorized Access of Taxpayer Account)** violations associated with the exfiltration of my return information to foreign intelligence, as evidenced by the 'Impossible Knowledge' timeline, CP14 dated 04/13/2026, the '**18H**' internal code and operator override documented herein. I demand an immediate Log Correlation Audit to investigate the PII leak associated with Project 2026200004. Rationale: This violation of privacy of a Whistleblower-taxpayer in direct connection with a retaliatory action, is concerning as might be related to case 1:25-cv-00457-CKK in front of U.S. District Judge Colleen Kollar-Kotelly, colloquially known as the "42,695 privacy violations." I urge TIGTA to use my IRS file and the internal audit logs associated with it as a case study for a criminal investigation.

5. **Request for Whistleblower Protections:** including but not limited to those specified

in **IRC § 6103** (Confidentiality and Disclosure of Returns) and **IRC § 7431** (Civil Action for Unauthorized Disclosure), IRC § 7213 and § 7431.

6. **Submission of Form 12661 (Disputed Issue Verification)** to provide the IRS-approved software logs confirming the original assessment of penalties was already included in the $442,531.00 payment.

7. **Criminal Investigation (CI) Referral: Route this file to Mail Stop 9001 (Criminal Investigation) in Ogden, UT:** I hereby request a criminal investigation referral to **Criminal Investigation (CI) in Ogden or Kansas City** for Interstate Wire Fraud (18 U.S.C. § 1343), Retaliation Against a Whistleblower (18 U.S.C. § 1513) related to SEC TCR 17742-648-351-976 / OFAC Disclosure: OFACDisclosure-01309. **Forward to CI Ogden, Mail Stop 9001.**

8. I demand that the Service Center Director immediately route this file and all attached exhibits to **Mail Stop 9001 (Criminal Investigation)** in Ogden, UT, in accordance with IRM 03-011-249r, due to the documented counterintelligence breach and UNAX violations associated with TIN: XXX-XX-2502.

Failure to address these procedural defects will result in the immediate elevation of this matter through the IRS Office of Appeals and the U.S. Tax Court, alongside a formal reporting of administrative wire fraud to the relevant Congressional oversight committees.

Sincerely,

s/Reinaldo Aguiar Marcano/

This is a Registered Email™ message from **RJ Aguiar**.

Honorable Mr. McDonald,

I am respectfully submitting to your office the attached criminal referral. The referral is about a RICO Enterprise that I believe is really threat to national security, but in this specific case the crimes alleged are **Interstate Wire Fraud (18 U.S.C. § 1343), Retaliation Against a Whistleblower (18 U.S.C. § 1513) and Abuse of Position of Trust (USSG § 3B1.3),** in connection with SEC TCR 17742-648-351-976 and OFAC Disclosures OFACDisclosure-01309 and OFACDisclosure-01310.

You will find all the details and hard, forensic evidence in the document attached to this email (the Evidence starts on page 28).

I trust your office will keep us safe,

Sincerely,

Reinaldo Aguiar Marcano
Former Managing Director, Goldman Sachs | Former Staff Software Engineer, Google

Strategic Convergence of Financial Aggregation and Judicial Subversion

The structural analysis of the events recorded on April 8, 2026, reveals a sophisticated, multi-tiered convergence between global financial asset aggregators, elite intellectual property law firms, and alumni of the United States Department of Justice (DOJ). The foundational premise of this assessment posits that the modern judiciary operates less as an independent arbiter of justice and more as a colonial organism, conceptualized biologically as *Siphonophora legalis-cannibalis*.[1] This entity is manipulated by a higher-order apex structure—the hyperparasitic *Vespa sino-seminalis cleptotechnica* or "Voodoo Wasp"—which utilizes local judicial hosts to protect a massive, globally distributed racketeering enterprise centered on intellectual property theft and capital aggregation.[1]

The primary mechanism of this enterprise relies on the overwhelming market dominance of the "Big Three" asset management firms: BlackRock, Vanguard, and State Street. Under the respective leadership of Chief Executive Officers Larry Fink [2], Salim Ramji [5], and Ronald P. O'Hanley [8], these aggregators wield the fiduciary capital of millions of American 401(k) contributors to secure indirect but controlling proxy votes across thousands of publicly traded companies. This distributed corporate control circumvents standard SEC "Insider" thresholds, allowing the aggregators to dictate board appointments, executive leadership, and strategic roadmaps without triggering corresponding regulatory scrutiny or tax liabilities.[1]

To operationalize the suppression of dissenting innovators and whistleblowers at the local level, this financial apparatus utilizes compromised municipal and federal courts. The execution of these judicial maneuvers—such as the creation of "void" orders, docket manipulation, and the deliberate misdirection of pro se litigants—is heavily dependent on the electronic court record infrastructure provided by Tyler Technologies, overseen by CEO Lynn Moore Jr..[1] By controlling the digital substrate of the judicial system, the enterprise successfully compartmentalizes its actions, generating multiple conflicting versions of legal orders to discredit targets and obstruct federal oversight.[1]

The DOJ Alumni Pipeline and Intellectual Property Monopolization

A highly critical secondary insight derived from the cross-referencing of the April 2026 declaration is the enterprise's reliance on a specific demographic of legal professionals to shield its operations. The analysis indicates a profound statistical anomaly: an overwhelming concentration of former high-ranking DOJ officials

ISBN 978-1-97-148127-2

functioning as partners within the tier-one intellectual property law firms retained by BlackRock, Vanguard, and major defense and technology contractors.[1] The global value of intellectual property is estimated at tens of trillions of dollars, presenting a lucrative target for international state-sponsored espionage and corporate monopolization.

To secure this stolen intellectual property and defend against federal intervention, the enterprise actively recruits individuals possessing deep institutional knowledge of federal law enforcement and prosecutorial procedures. For instance, the firm Kirkland & Ellis employs Matthew Galeotti, the former Acting Assistant Attorney General of the DOJ's Criminal Division.[13] Similarly, Skadden, Arps, Slate, Meagher & Flom features Donald L. Vieira, an attorney with an extensive background in the National Security Division and CFIUS reviews.[16] Orrick, Herrington & Sutcliffe retains Amy Walsh, a former Assistant United States Attorney for the Eastern District of New York [19], alongside former DOJ Office of Legal Counsel advisor Nicholas Quinn Rosenkranz [21] and former Supreme Court clerk Joshua Rosenkranz.[23]

The firm Foley & Lardner, which actively represents controversial telecommunications entity Huawei, employs former DOJ litigator Naikang Tsao [25] alongside hyper-local operatives such as Terrell Miller, whose geographical proximity to the whistleblower's assets in Katy, Texas, indicates a fusion of global legal strategy with ground-level surveillance.[1] Other entities integral to this network include Munger, Tolles & Olson (employing former Solicitor General Donald B. Verrilli Jr. and former AUSAs John W. Spiegel and Daniel B. Levin), Vorys, Sater, Seymour and Pease (employing former U.S. Attorney Benjamin C. Glassman and David F. Hine), and Patterson + Sheridan (led by B. Todd Patterson).[1]

By populating their intellectual property defense teams with these DOJ alumni, the enterprise effectively neutralizes the threat of federal investigation. When a target attempts to report corporate espionage, wire fraud, or judicial corruption to the FBI or DOJ, the network leverages its alumni connections to initiate back-channel communications, obstructing justice and ensuring that field agents are misdirected or entirely suppressed.[1]

Asymmetric Information Warfare via the USPTO

Faced with a completely compromised judicial and law enforcement apparatus, the target of this surveillance developed a counter-strategy utilizing the United States Patent and Trademark Office (USPTO) as an immutable, globally broadcast ledger. By filing 50 foundational patent applications—including disruptive methodologies for unbreakable asynchronous encryption, optically-native CPUs, and high-resolution parametric satellite communications—the innovator bypassed the traditional legal system.[1]

The strategic brilliance of this maneuver lies in its exploitation of legal ethics and commercial liability. By formally serving these patent applications and accompanying evidence of RICO activities to the

ISBN 978-1-97-148127-2

aforementioned intellectual property partners (over 400 individuals), the innovator triggered a legal paradox. If the attorneys acknowledge the notices, their corporate clients (e.g., Akamai, Cisco, Palo Alto Networks, ProtonVPN, and Linode Technologies) are legally deemed "on notice" regarding the obsolescence of their products and their reliance on stolen intellectual property, exposing them to existential commercial litigation. Conversely, if the attorneys universally ignore the notices, their collective silence legally demonstrates a "concert of the minds," providing actionable evidence of a coordinated RICO conspiracy.[1]

Furthermore, this strategy exploits what the innovator terms the "communist paradox"—a phenomenon where the reliance on stolen intellectual property extinguishes internal motivation and innovation, rendering the enterprise fundamentally incapable of independently developing solutions to the cryptographic and architectural barriers the innovator erected.[1]

Hyperlocal Surveillance Mechanics and Cryptographic Evasion

The technical analysis of the ground-level espionage operations reveals highly sophisticated deployment of commercial technology for intelligence gathering. The network utilizes commercial vehicles, specifically Teslas, equipped with modified rear-view mirror espionage devices capable of emitting and receiving encoded infrared signals. This optical communication network is supplemented by the manipulation of the target vehicle's headlights and taillights, which are forced to modulate digital signals readable by pursuit vehicles equipped with infrared-capable dash cameras.[1]

To facilitate the most secure form of data exfiltration—a highly directional, short-range infrared burst between two approaching vehicles—the enterprise deliberately influenced the municipal planning of neighborhoods such as Lake Point Estates in Katy, Texas. The incorporation of "S-curves" into the roadway geometry ensures that two vehicles passing each other perfectly align along a parallel axis, allowing the narrowly focused infrared transceivers to establish a secure, encrypted handshake that is invisible to the human eye and immune to standard RF interception.[1]

In response, the innovator developed an encryption protocol that completely eliminates the synchronous transmission of cryptographic keys. By independently transmitting an encrypted payload, a prefix, and a suffix across disparate times, physical locations, and communication mediums (e.g., internet, ultrasound, satellite), the protocol requires a secondary key that can only decrypt the unified tripartite block. Because the primary encryption key is never transmitted, the protocol achieves an unprecedented level of security, neutralizing the massive man-in-the-middle infrastructure deployed by the hostile intelligence network.[1]

TRANSCRIPT

PART I - The Bidirectional Escalation Between March 25, 2026 and April 4th, 2026

[00:00:00] Good morning. Uh, today is **April 4th, uh, 2026 and it is 10:46 AM US Central Time**, Saturday. My name is Reinaldo J. Aguiar Marcano, and this is, um, let's call it declaration, 132. So 1, 3, 2. Uh, so. You know, 'cause uh, there's, there's a lot of context, accumulated context, So if you're just joining this, uh, thread, I recommend that you, uh, listen to declaration 130 and 131 at least,

Uh, that way you, you'll get the full context, um, but basically to catch you up quickly. Um, this is about, um, uh, a financial scheme really, uh, that involves around 30 trillion US dollars, uh, those funds are being Invested by American families and this RICO enterprise is weaponizing that money, uh, using many different things.

But you know, one of the most powerful weapons they have is a network, a small network of um. Corrupt judges, like in the US and in other countries as well. But like, you know, this is mostly concentrated about the US. I mean, what I'm going to discuss today here. Um, so it's a network of, uh, judiciary and quasi-judiciary officers in the US.

What I'm going to mostly talk about today, and this declaration has two parts. Uh, one that is going to be, you know, focused on the legal topics, of course, because of what I'm saying, uh, well, legal and financial. Um. And another segment that is going to be more technical at the end. Uh, but I'm gonna start with the legal topics.

Okay.

Um, so I think, let me remind, let me remember, uh, what was the last thing we talked about? Because it's been like eight days since the last time I recorded one [00:02:00] of these. Uh, last week has been, um, you know, very intense in terms of work. I've been doing a lot of things and I haven't had a chance to record one of these.

Um, so yeah. So the, in the last, in the last part I told you about, you know, the, the scheme and I had made some, already some, uh, reports to the authorities, right to the SEC, to the DOJ. So to the SEC,

ISBN 978-1-97-148127-2

the DOJ, you know, the relevant authorities because of these two topics, Uh, financial crimes and, and judicial fraud.

So for financial crimes, it would be the OFAC and the SEC and for, uh, judicial fraud and crimes related to the judiciary. That would be the DOJ. But after that, a lot of interesting things developed. Uh, it was a sequence, So it was a sequence of, of events that unfolded, uh, not directly caused by me, but by them,

So they started this escalation. Um, [00:03:00] so let me start, let me start. Let me start there, So what, over the last week, it's been an escalation on the two sides. Uh, so they've been escalating and of course I've been responding, 'cause I'm not going to, uh, I'm not gonna just take it, So, uh, let me start by how they escalated.

So after I recorded the declaration 131, of course what they did was retaliate against the whistleblower. I'm the whistleblower in this case. Um, um. Which is a federal crime, like it's another federal crime, uh, retaliating against a whistleblower that is a crime and it's a serious crime. Um, but anyhow, so this is what they did.

Right? Uh, and you know, I have to tell you at this point when what I'm wanting to tell you came from, um, a person. And you know, if you're just coming in cold into this, you wouldn't know this, but I have a person that passes me information and this person works in Venezuela, in the Venezuelan army intelligence.

And he passes me [00:04:00] information because in this corrupt network that I'm describing, a big part of it is the Venezuelan Intelligence Services. I mean, Diosdado Cabello, who is an individual, especially designated by the OFAC. And I think the, the, the organization here runs like the underground organization, uh, the Cartel de los Soles. It's an organization that is recognized by the US government as a narco-terrorist organization.

So this is the kind of people that this. You know, that we're dealing with here,

So, um, this person, I'm telling you this because this person that works in the Venezuelan Intelligence told me last week after I recorded demo 131, that they were escalating, that they were going to do a series of things to harm me, to retaliate, right, to silence me. And what he warned me about was a series of move.

ISBN 978-1-97-148127-2

Uh, I didn't respond to this in the courts, uh, because, you know, at this point I've, I've, you know, I, I know that they have, uh, this, I mean, this court will do anything that Diosdado Cabello says, So, you know, that's the point. [00:05:00] Uh, and quite honestly, if they, if they, if they do do it right, it would be better for me in the sense that, uh, it's a very serious crime that I can demonstrate that they did, because I have guess, I have like 10 different ways to prove that this is wire fraud.

But, uh, so, you know, I, you know, let's roll the dice. Like if they do it, yeah, it's better for me. But, um, but the, I wanna tell you what the, what the, this informant told me because, uh, if, you know, if they did do it right, like if the DOJ goes and audits the docket, and they did do it. How could I have known this if I wasn't even there?

Right? This would prove that, um, and I wasn't there because they didn't serve me with any documents. Um, they sent the process server to harass me and he taped papers and stickers to the walls and the windows on the perimeter of the property, a series of notices for "urgent legal service", but they were addressed to a different person, that was not my name.

So I did not even take those documents because they were not, not addressed to me. And I imagine they do that on purpose. Like, so if [00:06:00] they, if they get in trouble, or investigated by the DOJ, what they're gonna do, they're gonna switch the documents using Tyler Technologies, and to get context on this, you have to watch the previous declaration D131.

But what they will do is if they get in trouble, they will switch the documents with another case that has that name that they served me with that is not my name. And they will say it was a clerical mistake. You see? Uh, so this is a, a, a, like an escape hatch that they built into this so they can, they think they will be able to escape prosecution with this explanation.

But anyhow, those documents were not addressed to me, so I didn't even take them. 'cause I'm not going to accept legal service for something that is not addressed to me. I'm not …. you know… I know, I know what I'm doing.

So anyhow, that's what they did. Um, but the important thing is because I did not take the documents, I was not served and I could not go to that hearing or whatever.

So that's what they did. So, uh, I don't know if it was a hearing, if it was a secret hearing. I don't know exactly how they did it. But if the DOJ audits this docket and they see that they [00:07:00] did. Do what

ISBN 978-1-97-148127-2

the informant told me. Then what this really proves is that they're working for Diosdado Cabello because otherwise, how could I have known this if I didn't even get served?

And I didn't even go to whatever it is that they did. I wasn't present. I haven't seen any documents. Uh, and I wasn't served electronically or in any way. I, I don't have, I don't have any knowledge of what they did. Direct knowledge. The knowledge I have is indirect from what this person told me. So if this is what they did, this is proof,

That they, that they're working for them, and I'm talking about Judge Oscar Telfair III directly, And G. Troy Pickett and William Kyle Adams, like three of them. Uh, so anyhow, and if you want to know more about who these characters are, you know, please, you know, uh, look for them in the documentation that I will attach to this recording.

Uh, so anyhow, what the, what the, what the informant told me that they were going to do is, was they were going to evict me from my home. Uh, and the way they were going to do that is that they were going to claim that there was an emergency, uh, related to my son, like a financial [00:08:00] emergency, and that he was to going to face, uh, that, that he was going to be homeless.

Right. My son is four years old, uh, because the mother who is the, you know, the, the, the entity that they're using to harass me with the courts, um, uh, could not pay rent. Like that was, that's what was going to be the argument And all this started, they started seeing this exactly. After I recorded that demo, uh, 131, the next day she came, so her name is Zuleima Villamizar, but I mean, she, that's an alias,

Her real name is Zuleima. And she's really married to, uh, Andres Salvador Mendez, who is an agent of the SEBIN here in Katy. So, um, what, um, what, what, you know, what the informant told me is that what they were going to do, they were, they were, make that claim. So what they did is that they, you know, she came to , to bring the child so I could see him right.

And she started talking about a series of financial topics that day. Uh, so she [00:09:00] started telling me that, uh, her other son, uh, has, uh, to pay, like he was thinking of not enrolling into, he, he's gonna graduate from high school this year. And she said that he was not going to enroll in university because they couldn't pay for it,

So, of course I volunteered to pay for it. I'm not gonna let him, you know, waste his time. So I asked him, I asked her, you know, how much is it? And she said something like $30, $6,300 or something like

ISBN 978-1-97-148127-2

that. And I said, okay, fine. I'll, you know, please tell me how to pay for his tuition. Where … like, where should I send the check and I'll pay for it?

And that was the conversation. But then the next time she came by on Saturday by her own initiative, I mean, she proposed coming by on Saturday. She didn't have to come by on Saturday, but she proposed coming by with the child. So on that Saturday, she started talking about money, but she didn't mention the word college.

She just mentioned the $6,300, So she made basically a verbal demand for $6,300. But she didn't say anything in the conversation that it was for the college tuition of Sebastian. What were they for? So this is the same thing that they always do. They design these conversations to take place and then they take these conversations, [00:10:00] they take them out of context, and then they take that to a judge to … I mean, to a corrupt judge, really.

A corrupt judge that is willing to sign this without seeing anything else, just by hearing this void, incomplete and out-of-context statement from only one party. So I believe the $6,300 amount in the "college tuition" conversation was inserted there by design, because that is probably the amount that G. Troy Pickett is demanding in court. So they, they, they want to "confuse" the judge and say that when she's saying that $6,300, she's talking about.

The… whatever monetary demand G. Troy Pickett is making So that's the ruse. It's a ruse. That's, I mean, that, that amount of $6,300 is not casual. That's by design to make this confusion… is not really a confusion because the judge has to be in on it. Because, I mean, a serious judge would not make a serious order like this to evict the person from their home.

Uh, because basically what he was gonna do is, you know, evict me from my home to give it to the child, supposedly Uh, which is, you know, it's, it's a, it's a, it's a crazy proposition. I mean, in legal terms, that is crazy, I mean, it's [00:11:00] an illegal thing to do. Especially if you're doing it to silence a federal whistleblower.

Right. Uh, but that's a ruse, So that's why the $6,300 conversation happened. Um, it's a, it was that, that amount is by design. Um, and then of course she made other comments, like, like, and, you know, I'm sorry to start this conversation with this topic because I don't want, I don't want to make this about a personal matter, but I, I need to say it.

ISBN 978-1-97-148127-2

So authorities, when they investigate this, uh, they can see how their ruse works, And then they can, I mean, to shorten the … I'm sure they will figure it out anyways, but if I tell them exactly what they did because I got it from this informant, I imagine it would be easier, faster.

And my goal here is to get this resolved as soon as possible, because, you know… these people have already wasted 25 years of my life. Uh. So anyhow, um, uh, that, that, so, so she made those demands, And then she also made a, [00:12:00] a few comments, uh, like saying, like things that, I mean, they're specific, but at the same time, ambiguous.

Like, they may give you an example. She said, "oh, at this point I don't believe in you because you have promised me so many things, so many times and you never deliver" something like that, Uh, I think this is to seed the idea on this transcript or whatever, it's that they're gonna create or created already that I had made monetary promises to her that I have not fulfilled.

And that I am in contempt of court and all those things. So that's what they were going to do or did, I don't know. I, because they didn't serve me and I wasn't there. Uh, so what I know is what the informant told me. And if this is the case, this is just more proof, Um, not that I need any more proof.

I have all the proof in the world, but, you know, this would, this would be like additional proof, Um, anyhow, uh, yeah, so that's, that's, that's how the ruse, [00:13:00] uh, work. Now, I have to tell you a couple of things. This is a bit dangerous. I mean, this is what I was telling you at the beginning, That if they do it, if they do it, or if they did it, it's better for me because this is, I mean, this is a lot of liability for a RICO enterprise that is directed by people that work in finance.

I'm talking about the big three, like the CEOs and the CFOs. Um. And all the companies that control directly and indirectly, and to get context on this, because this is a complex topic, I would recommend that you please, um, listen to declaration 131. It's all in there. It's very, it's very encapsulated in that, and, you know, it's easy, easy to digest.

Uh, so anyhow, if they, if they, if they, you know, evict me from my home, that is wire fraud, because they're using. Uh, Tyler Technologies, which is the company controlled by BlackRock, Vanguard, and State Street that manages the court records of all the courts, the state courts in Texas. Uh, and this is an interstate [00:14:00] system because they have operations on 24… I mean, they manage the court records of 24 different US states, and it's wire fraud because they're depriving me from my home, from my property, uh, using fraudulent means, like making all these ruses and all these things. And, you know, I mean the, even the, even from the beginning, Like this divorce case is, is fake.

ISBN 978-1-97-148127-2

I mean, she's married to another person. How can she be filing to divorce me if she has a husband and we are not legally married? Um, and you know, and there's like 10 different reasons, but, um, they all know that this is fraud And it's to the, it's a scheme to, to deprive me of my property, of my home. And not only that, to evict me from my residence.

And I'm a federal whistleblower. So I mean, so this is a crime so serious and it's a RICO enterprise. So these would, you know, bubble up to the CFOs and the CEOs that are doing this, that are really giving the orders and putting the money to do this. So it would really be, um, [00:15:00] it would be good for me,

Because it would create basically life sentences for the CEOs that are directly giving these orders, Um, and I'm saying this not subjective. I'm saying this based on the federal sentencing guidelines. If you look at the guidelines and you look up the sentencing guidelines for the crimes that I'm mentioning, if you add them up, you stack them up, it's a life sentence.

Uh, I already did the math. Um, and you know, like, well, I mean, it's not life sentence. Well, yes, it's a life sentence, but also even if it was. 20 years, these CFOs are already, I don't know. There's one of them that is 6 73. Uh, I mean, if you add 25 years to that, you know, he would be a hundred when he, when he's released.

Right. Even if it's not a life sentence. Um, so I don't know. It's, uh, it seems to me like it's a way to, to definitely take them out of circulation If they take that home. So that's why, you know, I'm, I'm letting them play it. Like if they wanna play it, you know, play it. So that's what they did. Uh, but now I'm gonna pivot it a little bit more to what I [00:16:00] did.

Right. Because, you know, I'm not, uh, we have a joke in Spanish, uh, that is, uh, I don't, I don't know. Well, maybe, maybe it doesn't, it doesn't translate very well, but the joke is basically that you cannot assume that the other person is not playing, like the other person is going to respond.

Right. And so I respond, um. And so let me tell you what I did. What I did wasn't really one thing. What I did was, um, a strategy. I designed a strategy. I structured a strategy that has multiple different steps, and I executed it. Um, and the idea of this, I mean, I'm gonna stop by telling you the goal of my strategy.

ISBN 978-1-97-148127-2

The goal of my strategy was to, um, or is to basically to create a threat of liability. Meaning, uh, to basically wave in, uh, all these actors in a way as force them to interact In a way that is demonstrable. [00:17:00] Uh, and that is that they have legal liability as a group, Because this is what I need, uh, or I mean, not me, but what the authorities will likely need to, uh, to make the RICO case against them,

And that's important for me because this will make the liability of Judge Oscar Telfair III of all the crimes that he has committed. And Judge Bell, who was the one that took the child with the court order that was void, um, the liability of them will bubble up to the CFOs because it's, if it's, if it's demonstrated, it's a RICO enterprise.

So that's why this is important to me.

So, um, what I did was the following, So I created this strategy, a multi-step strategy in which, um, I created situations in which they're forced to either act or not act And in either way, because of the actors that I picked and the things that I decided to hit, uh, even not acting, carries [00:18:00] probably criminal liability in, in most of the cases.

And in some of the cases, maybe not criminal, but ethical, like, you know, like, you know, they could be disbarred, uh, if they don't act Um, and things like that, like there's different professions I play, I play here, but it's mostly at Target. Okay. And judges, of course. Um, so that's, um, the, so that's, that's basically the, the description, right.

Of my, of my strategy. But before I tell you that, I have to tell you that, uh, there's one, a couple of important things, So one is that when Judge Oscar Telfair III on the 387th Court created that. Uh, void order that, that when he, that he signed, when the court didn't, did not have jurisdiction. And that's the order that stripped all my parental rights.

And he supposedly signed it on October 15th so he put a clause in there … [00:19:00] and also the attorney for the other party in the hearings that led to that event of signing that void order, said on the record that I was living on the Valleyside property. So all of them, the attorneys, the judge, the other party … and it's also on the record, and the judge also put in the order that the "supervised visits" would take place at my residence at 26714 Valleyside Drive, Katy TX 77494. All of them have knowledge that the Valleyside property is my home.

Because what they were going to claim is that I don't live there. That is a house that is empty and therefore because it's empty, nobody is really harmed if the house is given "to the child". That's, that's

ISBN 978-1-97-148127-2

what they were going to say, but that is not true, and they know it's not true because all of them know that that's my home because it's on the record.

The opposing counsel said it on the record and the judge put it on the order. So they cannot say that. They don't, they think it's not my home. Okay. Now this is important because the attorney, Morgan Hybner, was her name at that point. I think this was on September 8th, 2025 in, I think this was the first [00:20:00] hearing that I saw her, or the second hearing.

She said this, right. So she made a comment on the record saying, oh, he has two houses and one of them is empty. Because he has a lot of money. He's a very successful man. Something like that. Something that sounded like she was, she was like elevating my status, financially. Which is not true. Like she knows that I'm working on my own, I'm by myself, like nobody's employing me. She knows that. But she did that in reality, to put that statement in there, that the house is vacant, and she did this on September 8th, 2025.

So more than nine months ago, and now they're pulling this off. I'm telling you this because this shows planning, they planned for this at least eight months ago. That's why she made that comment on the record. Also, when I went to the other court, uh, for the traffic citation, and that is a different story.

I'm not gonna get into the details, but these people have been harassing me with the police, and at some point at the end of 2025 they created a traffic citation that I had to go to Court for, in person [00:21:00] and in that occasion the clerk, handed me a piece of paper, a form, and she tells me, "put your address in there", which she shouldn't have to because my address is on the system.

I have a Texas driver's license. Why is she asking me for my address? The informant told me that they did that because they wanted to see if I would make the mistake of putting in that form my "office" address as if it was my "home" address. If I made that mistake, they would use that to claim that the house is empty, you see? But this is important because it shows collusion between this other court, which is JP 1.1 in Fort Bend County, Texas, and the 387th Court and G. Troy Pickett and William Kyle Adams.

Because I mean, they're working together to create this narrative that the house is empty, so when they evict me, it doesn't look like a Criminal Act to silence a Whistleblower. So, you know, at, at this point right there, you have already five actors colliding, the concert of the minds: G. Troy Pickett, William Kyle Adams, Morgan Hybner, the 387th Court and the JP 1.1 Court. And also there was an incident in early [00:22:00] March, 2026 in which one of their ground agents intentionally crashed into

ISBN 978-1-97-148127-2

my car, causing an accident when I was going to file documents with the Supreme Court of the United States via FedEx (**See State Farm Claim No. 5397K770W**).

And the police arrived, and the police again gave me a form to put my address on. This is, again, illogical because this is a police officer. He has access to the state police systems, I mean, this is a computerized system that has my address. It's in my driver's license. Why is he asking me for my address? The informant told me it's the same reason, and this was not one but two police officers at the same time asking me for my address. So Seven actors so far are working on this little narrative project for Larry Fink.

It is because, uh, they wanted me to make that mistake, They wanted to give me the opportunity to write in that, in that box, the address of the other property, and they thought I would do it because the address of the valley, so the Valleyside home, the one that they want to declare "empty", they stopped the mail to that property by marking the house as "Vacant" also to feed into that narrative, but more importantly: Since I cannot receive mail in that house and these are court and insurance proceedings, logically, I would maybe be tempted to write down write down my office address (2302 Britton Ridge Drive) where I can't receive mail, as if it was my Residential address. Uh, but I did not make this mistake when they asked me for the address, I put the address that is in my, on my, on my driver's license, which is my home address.

so [00:23:00] anyhow, they have no way to say that the house is empty and the judge has acknowledged that the house is not empty and it's my residence. And he's basically evicting me from my own home without due process. Uh, so I mean, this is, I mean, this is one of the most serious crimes that they, they, they have committed so far.

If they did do it right, um, I don't know because they didn't serve me. I don't know if they had a secret hearing that I could not attend because they didn't serve me. But if they did that, then, uh, you know, it's, uh, I think it would be, I think you call it this in, in, in law enforcement circles "perfecting the crime".

If they did do it, they perfected the crime and, think about it… This is important a… reflection I had is that over the last year, they haven't touched my money with the courts. They took the child, but they haven't taken the money until now.

And I think there is a reason for that. The reason is that taking the money, it's demonstrable and it's wire fraud. And these people work in finance, and not only, I mean [00:24:00] not only that I'm a client

ISBN 978-1-97-148127-2

of Vanguard and I have been a client for more than 15 years and Vanguard has a fiduciary duty to me to always act in my best interest, and they are committing wire fraud against a client.

I mean, in finance, there is nothing more serious than this. Nothing really. I think I, well, I mean, I guess, you know, running a Ponzi scheme of millions of dollars, right. But short of that, you know, this is one of the most serious things you can do if you are the CEO or the CFO of Vanguard. And Vanguard is part of this, the, of the, of the big three that I'm talking about,

It's Vanguard, BlackRock, and State Street. Um, so what I was going to tell you is that over the last year, they haven't touched my money with the courts. They took the child, but they didn't take the money. And I think the reason is because with the child, I mean.. for a normal person like you and me taking a child 3-year-old and kidnapping the child is probably a more serious crime, you would see it as a more serious crime, I would see it as a more serious crime than wire-fraud, I mean, if, if I had to commit one of the two crimes, I would choose the financial crime, to commit it, because to [00:25:00] me, the kidnapping of a 3-year-old child, seems more serious, seems like it would carry a higher penalty, To me, at least. But see, this is not the way they think. They don't care about the penalty. Uh, what they care about is whether it's demonstrable and whether it could be explained in another way or not, and whether it could bubble up in liability to the CEOs or the CFOs of these three big companies, the Big Three.

That's the criteria really, because again, these three companies together control 30 trillion US dollars, which to put that in context for you, It's a higher amount than the entire GDP of the United States for a year. So these people, these three men have control of a budget that is bigger than the entire GDP of the country. Put that in perspective for a second and let that sink in.

So of course they don't want anything that could be tied to them, and the kidnapping of the child cannot be tied to them because it could always be explained as, oh no, this is just a family issue. This is a one parent taking the child, and if anybody is to blame, it is the parent that took the child, this is parental kidnapping, this is a crime, but the person that would be charged is the parent. The CEO of BlackRock cannot be charged with parental kidnapping because he's not the parent of the child, but a financial crime… He could be charged with that.

So that's the reason why they prefer kidnapping the children than, you know, taking the money. But because they got desperate after I did what I did on demo declaration D131, and I reported the three of them to the OFAC and to the SEC, then they escalated to touching the money, in the form of

ISBN 978-1-97-148127-2

evicting me from the home utilizing this corrupt judge, Oscar Telfair from the 387th District Court in Texas.

So that's the, you know, that's the entire dynamic on the escalation. Okay. But as I said before, what I did was to, um, to create a strategy really, uh, and this is what they, you know, I, when I do this, I mean, this is not the first time that I [00:27:00] create a strategy like this. Uh, I mean, over the last year,

That I've been, uh, fighting them off, uh. But I never really go into the details of the strategy. Like I just do what I do. And, but I think, I mean, um, uh, in this case, you know, I, I'm gonna go into step by step how it works because I think they don't understand how it works Um, to be honest, uh.

Yes. Uh, but before I get into that, you know, the clear implication here is that, I mean, um, the way they decide, right, which crimes to commit is that one, they understand that, I mean, they're, they're picking based on where the CEOs and the CFOs could be liable, Or could be found guilty or charged.

That's, that's the criteria they're using to pick what crimes to commit, uh, to, to harass me and to, um, retaliate against the whistleblower, me. [00:28:00] But, um, the other implication is that they understand how serious it is to, uh, evict the whistleblower from his residence, because otherwise they would've done it already.

In the last year. I mean, they had a full year to do this and they haven't done it until now. Until I recorded that, that, um, 131. Um, so anyhow, uh, you know, I think that is in itself very telling, uh, on who is making that decision. When they saw that I was naming them personally, then they did this.

Right. Anyhow, so my, my strategy, it's a strategy that it's, it's, it's growing like it grows as time passes. Uh, the strategy keeps growing and growing and growing. Okay. So it's a, it's kind of a serious, it's a, it's a. It's designed to never stop. It will never stop until they return the child. Um, and I will just keep going.

And I, you know, I have no shortage of people that I cannot do this strategy. Uh, but I'm gonna, you know, give you an [00:29:00] idea of more or less how it works. Uh, so it's basically a series of steps. Uh, think of it, think of it as a, it's like a train. If I could put an analogy to it. It feels like a train, but this is a different kind of train.

ISBN 978-1-97-148127-2

I mean, normally, right, when you have a train, you have the conductor of the train, You have the locomotive at the, at the, at the beginning of the, of the train, like at the, on the front. And then if you want to add, uh, carriages to the train, you add them on the back, It's something like that.

But I think the difference would be, I mean, if I can give you an analogy, It would be like a train with a twist. The twist is that when I add somebody to the train, I add them at the front so they become the, um, the Conductor, The conductor of the train, um, when somebody, uh, uh, gets added,

So I guess right in a traditional locomotive, like in the real world, in the real world, it's basically a system [00:30:00] that is last in first out, so the last cargo you add is the first you have to take out. Uh, but in this case it's also last in, first out, but you have to take it from the front, I guess.

But the point is that the most important carriage, I mean the more, the most important part of the train is the, the driver, So the driver in this schema that I'm going to describe to you, the driver is the one that carries the most legal liability,

So I imagine if I were the authorities, that's the one I would go after first, Because if you, if you prove that, you will prove everything, Uh, just one second. Okay,

so, uh, [00:31:00] yes. So, okay. So it's a series of steps, okay? And the idea is on each step, the person that I act, uh, or interact with, uh, on that step, that person has to make a choice, you know, whether they, um. Take an action or ignore me, Uh, depending on what they do, then I take the output of what they did, even if it's ignoring me.

Uh, and then, um, I send it to somebody else. See, and then that person comes basically in contact with this information and they have the same choice to make. They can either act or they don't act and depending on what they do, I take that information and I send it to another person. And that's the way it works.

Right? So let me, let me, let me tell you how I designed this thing, Um, so I started with the tech companies, of course, Because, well, the tech companies first. They are my technical adversaries and they've been doing this for 25 years and they've been stealing my inventions for [00:32:00] 25 years. Uh, you know, I'm not gonna get into details like look at the other, uh, the other demos and you will see what I mean.

ISBN 978-1-97-148127-2

Um, but, uh, I started with the tech companies, And within the tech companies, also with Tyler Technologies, because, uh, Tyler Technologies is a company that has two characteristics that are important. Number one, it's in its majority, like the majority of the shares are owned by the big three. So they, in reality, control this company.

They can put the CEO whenever they want, they can replace the CEO of Tyler Technologies. And the second characteristic is that Tyler Technologies is the company that runs the electronic records of the courts. And this company is a fundamental piece to enable this network of corruption. Because without this, without the intervention, this would not be possible.

I mean, what the judges are doing to everybody, Um, that allows them to take children from their homes and, you know, create multiple versions of the orders and switch them depending on who has [00:33:00] for the orders. Like all those things are possible because Tyler Technologies is helping them. It's enabling them.

So, of course the way it looks is that Tyler Technologies is a fundamental part of the RICO enterprise. Um, so of course they have super high liability, legal liability, Particularly 'cause there's a child that is kidnapped, um, and all these void orders that they've created in all these different cases.

At this point it's like six different cases that they have against me in the Fort Bend County Court courts. Uh, so it's, you know, it's a lot of liability. Um, I see. Uh, this is how they're gonna apply it. Okay.

Okay. I don't care. Anyhow. Um, I,

this is, um, yeah, so, so one second. 'cause there's a lot of traffic here.[00:34:00]

Yes. This is perfect.

So anyhow, um, yeah. So I send notices to them, but there's two types of notices. Number one is for the tech companies, like, you know, my, my adversaries, my tech adversaries, So these are whereabout, the patent applications that I described before in the previous demos that I filed with the US PTO.

This is the office in the United State Governments that handles the patents and the trademarks. So I sent a notice to all these tech companies, putting them on notice of the existence of these patents, the

ISBN 978-1-97-148127-2

license, the existence of the free license to the US federal government and how these affect their businesses.

It's a serious threat to their business models, and they have to tell their investors so they have a duty. It's not, no, it's not discretionary. They cannot like, ignore this, I mean, they could, but it's a, it's a, it's a, they, they would be violating the regulators, the regulations of the SEC and this is serious.

And it could have, it could cause serious damage to them [00:35:00] personally So, um,

one sec. I see.

So, so, yes. Um, that, that's one type of notice. Okay. Um, the second type of notice is the notice that Tyler Technologies is telling them, listen, there is a network of corrupt judges, which are really a RICO enterprise, and they're using Tyler Technologies in a way that allows them to commit these crimes. So now they have a duty to report these to the authorities.

I mean, Tyler Technologies have a duty to report themselves. To the authorities. And they also have a duty to tell their investors, because they're a publicly, publicly traded company, they have to tell their investors, which in the majority would be BlackRock, Vanguard, and State Street, and the people [00:36:00] that are investing through them, right, the the actual end investors, they have to tell everybody that they could face federal criminal investigations because these are, these affects investors and they have a duty to disclose it.

So that's the second type of notice. And the third type of notice is a notice to Vanguard, BlackRock, and State Street, uh, to their CFOs, CEOs, and, uh, general councils informing them that their investments are facing significant risks for these two reasons combined. So there's two different reasons,

One is that Apple and NVIDIA, Intel, Google, Amazon, et cetera, could face imminent depreciation of their stock because the roadmaps could become obsolete because of these patent applications. And you know, don't take my word for it, like, please, I invite you. Read the patent applications, you will see what I mean.

And if you're not a technically inclined [00:37:00] person, I invite you to ask an engineer that you trust somebody that knows about hardware and software, show them the patents and ask for their opinion,

ISBN 978-1-97-148127-2

if you'll see what I mean. So I don't, I'm not asking you to trust me. What I'm asking you is to give the benefit of the doubt and ask somebody that you trust on this.

On the patents, okay. On the patent application. Um, but anyhow, uh, so, so I told the big three, the CFOs, the CEOs and the general council, general councils of the three big aggregators, that their investments and the investments that they're managing for millions of Americans face two different categories of risk that are huge.

One is related to the obsolescence of potential obsolescence of the products of all these companies that they're heavily invested in. 'cause in some cases they own 15, they control 15% of the shares of some companies, like in the case of Google, [00:38:00] Vanguard controls around 15% of Google. Uh, so that's one of the reasons.

And the second reason is because of the imminent federal criminal investigations that Tyler Technologies could face. And these three companies combined have something like a $6 billion stake in Tyler Technologies. So they, I mean, the big three are obligated themselves to tell their own investors, both the investors that invest in their company and the investors that invest in their products, and the employees of other companies that have their 401k managed by them.

So they have to tell everybody, and they have to tell the regulators as well. They have to file something with the SEC. So you see, so this is, this is nuclear, I mean, this series of notices. Uh, on itself it's, it's, it's nuclear. Um, but, you know, don't leave because this is just a step one of the strategy.

Um, we're gonna be working on, on other steps that I'm going to describe to you. So, [00:39:00] um, so this is step one. And by the way, I created a simple website that contains all the links for all these documents. So all these documents that I'm describing are available to you. You can download them and review them and, you know, uh, consult them with an attorney, with, you know, somebody that you trust to, to see if you know, is this person crazy or does this make sense?

Right? Uh, but among the notices I sent, because I mean, this is kind of a special case, but there's also a notice that I sent to Uber because in this group of patents, it's, it's, at this point it's 40 different inventions. Okay? In this group of inventions, in this portfolio, there is an invention about a geo-indexing technology that could threaten Uber in multiple ways.

Uh, legally speaking, like there's gonna be a problem with Uber, with this patent. I cannot show you that. Um, and so I sent a notice to the CEO of Uber and the general counsel, but I also [00:40:00] cc'd

ISBN 978-1-97-148127-2

on that letter, Emil Michael. Because I offer a license, a free license to the Department of Defense, and he would be the person that would be administering that license.

Right. But this is funny to me because Emil Michael and, and also CC Travis Kalanick Um, but this is funny to me because Emil Michael used to work for Uber under Travis Kalanick, uh, not too long ago, less than 10 years ago. Uh, so I don't know. It's funny to me to see Travis Kalanick, the new CEO of Uber, the General Council, and Emil Michael all together in the same letter.

It's just hilarious Uh, so I don't know. I don't know. They, and, you know, I'm, I'm telling them the same thing, you know, Uber faces, uh, no. In this case, I played it differently. I offered them a license. That's what I did. I told them, listen, I invented the thing. I have the application going, and if you're interested, let's talk.

If you're interested, let's talk. And, you know, I offered to give you a license, but now they're in the know. I mean, my objective is to put them on notice of the existence of this patent. Application. [00:41:00] So, and they are right, they're, they're, they're, I sent this physically and also over email.

Um, but we're still at step one. Okay. And it's 11 steps at this point. So I have, I have, uh, done these 10 more times But with different ideas and different people Of course. So let's talk about step two, the step two. Step two is that I took the notices that I described before to the tech companies, and I sent them to the big three, to Vanguard, uh, State Street and BlackRock.

Uh, which as I said, they control $30 trillion of, uh, investments in the, in the US. In the capital markets in the US. Um, so this is the, so the, but that is kind of still part of step two. But what I did is that I created, uh, some proposals for, uh, le legi, like law changes and [00:42:00] regulation changes. So I sent some proposals to Congress, to the US Congress, and I sent some proposals, like to the banking commissions, real banking commission or committee, I don't know what it's called.

Uh, and I also sent, uh, uh, three requests for rulemaking to the SEC that basically would make what these big three aggregators are doing. Impossible. Okay. I don't know if that's gonna pass or not, but you know, I sent them, right. Um,

yes. Then, let's, that's step two. So step two was to create these, um, proposals for legislation and regulation. Okay. Um. But then the step three is that I took all the previous information, I mean all the previous documents, Meaning the notices that I've sent to all these companies, you know, including

ISBN 978-1-97-148127-2

aggregators, the legislative changes, the, the law changes or the proposals for law change, and the proposals for rulemaking, [00:43:00] uh, request for rulemaking.

I sent all that to the SEC, uh, employing the mechanism of filing a TCR a TCR. It stands, that stands for deep. Uh. Tip, uh, referral? No, sorry. Uh, I can't recall what this is for. Um,

I can't recall, but it's basically, uh, a referral. It's like saying, you know, I think there's wrongdoing here, and this is what I have, this is why I believe this, and documents and stuff. So I, it is a packet of I think 120 pages that contains everything that I'm telling you, right until this point.

So basically it's a compilation of a step one and a step two, and I filed that formally with the SEC. So now the SEC has a duty to investigate, and this also automatically makes me again. For the nth time, a federal whistleblower, Naming these people [00:44:00] personally, I mean the CEOs of the big three.

And I did the same with the OFAC. I filed a disclosure with the OFAC with multiple disclosures naming Diosdado Cabello and the CEOs of the big three. Um, and that again, right for the n plus one time makes me a whistleblower, Whistleblower. Um. One second. One second, because there's a lot of traffic here.

Okay.

Yes. Um, so this, this proposal for a law change, um, it's, uh, I, I did it as, um, I took the proposal itself and I wrote what I would describe as a research paper or as a white paper. Um, so it's basically a document formatted as a, [00:45:00] or a structure as a scientific document, as a research, as a research document.

Um, and now I'm, I'm talking to you about step four. Um,

uh, I formatted this document. Uh, by the way, the name of the law proposal is the “MARCELO Act”. Uh, that's the name. And each letter has a meaning that basically maps to the way this disarms the, this scheme of the big three, But then I took the MARCELO Act and I turned it into a white paper into a research paper.

Okay. Uh, it, it, it, it feels like an economic research paper, uh, a little bit, Um, you know, I'm not an economist, so I, you know, it made, you know, it might, it might lack proper form or format. I don't

ISBN 978-1-97-148127-2

know. But I did the best I could to put it in that form. Um, and this, this will be important in a second. You will see why.

Then step five is that I took this research paper and I filed [00:46:00] OFAC disclosures, including the research papers and all the documents generated before now. So now the OFAC is in acknowledged that everybody is in knowledge of all the things that I mentioned and is also aware that the SEC is in knowledge,

So now if the SEC doesn't act and the OFAC does act, the SEC people will be in trouble. I mean, the enforcement department, and this is important because they have blocked my reports before. Over the last year I've made multiple reports to the SEC and they blocked them, But if they don't act on this one now the OFAC is aware.

That they, that they know and that they know that everybody else knows So at this point, everybody knows everything. And the one that knows the most is the OFAC. So you see this principle that the one that it's notified, the, at the last position is the one that has more liability because they have more knowledge.

Like they know about everybody knowing, but nobody knows that they know. I mean, nobody until that point, until I add the next carriage. [00:47:00] Which would become the locomotive now, I mean, the, the, the driver of the train, the new driver of the train will know that the OFAC knows, Uh, so now this is where I really applied, uh, you know, my, my, my distributed computing, uh, uh, distributed computing skills to this problem.

And I scaled it. So look at what I did. I took the MARCELO Act. Well, in this process of when I created the MARCELO Act, I discovered that there is a website or a, it's a platform. It's called, um, I think it's called Scholastica. It's a company from the Netherlands, but it's heavily used in the US by universities.

And the way it works is that you can publish a paper there, on that platform, and universities pick your paper. you can submit the, the, your paper to many journals, scientific journals in the US and in other countries for something like $4 per submission. So there's a fee that you have to pay, but you can send [00:48:00] to hundreds of Academic Journals.

And because I created this economic white paper, I sent it to a lot of economic journals, uh, from universities, So a lot of economists saw this. I mean, I'm talking about the MARCELO Act, white, white paper. Okay. But when I did this, I thought, you know, this is really a nuclear weapon because

ISBN 978-1-97-148127-2

now I have this white paper and I have this platform, or I can have access to this platform that allows me to send it to universities everywhere in the world.

I can notify many people with this. I mean, I have to pay for each submission. But it's a price that is worth paying because for $3, I can notify the person that runs the journal, the editor of a journal of, of an accredited university somewhere, that the Big Three are committing these crimes. And as I said in the previous demo. This scheme, they have running it in multiple countries, so this is a gold mine. I mean, this finding that I could do this,

So I start by, um, [00:49:00] by doing this, right, uh, sending this to multiple economic schools or economy schools in the country and in different countries. Um, I sent it like to, to an idea, to something like 200 schools, the white paper for Marcel, for the MARCELO Act.

But then I evolved this, Um, because I discovered, I saw that in this platform as Scholastica, they also have law schools, uh, so basically law journals. This was the, the eureka moment for me because I know that, you know, at this point, after doing the first run of this, I understood that I could send an equivalent of this, but to law schools, and remember this is the network of, of, of judiciary crimes,

The judiciary fraud basically enabled by Tyler Technologies and Tyler Technologies is the provider of the courts of 24 states in the US. So I could send these to the universities. In at least those 24 states or even all the [00:50:00] states. But you know, even if I only send it to 24 states, it's a nuclear weapon.

This is why I would say it's a nuclear weapon, because, um, attorneys and even law students, you know, because eventually, they will want to apply for the Bar Association of their State, they have an obligation, an ethical, and in some cases even legal obligation. It varies by state. But if they're, if they have knowledge… If they have knowledge that a crime is being committed that affects the integrity of the courts, they are obligated to report it. It's not discretionary. They cannot turn a blind eye. So it's a nuclear weapon, because they are forced to basically accuse their colleagues, and Tyler Technologies with authorities, which ultimately would expose BlackRock/Vanguard, etc.

Uh, so it's, it's nuclear, really. Uh, so. This is a step. So what I'm talking about now is step six. So the step six in my strategy was to turn this white paper of the MARCELO Act into, [00:51:00] uh, so, you know, I, I did some research and I figured out that these journals, uh, the, the format that could be acceptable from a submission of mine could be.

ISBN 978-1-97-148127-2

Uh, what they call an article for commentary. Um, so this is basically an article. It's formal as an article. Think of an, of a, of a newspaper article, but it's more technical, It's based on law. It's a discussion about law and, you know, issues that have to do with the legal. A profession, Or the, or the laws themselves, the frameworks, things like that.

So what I did, I turned the Marcelo paper into … and remember: the MARCELO Act paper, which was an economic oriented whitepape, I turned it into a, uh, into an article for commentary, for commentary to be submitted to the legal journals. So this [00:52:00] article, uh, shifted a little bit from, I mean, it talks about the financial crimes because at the end is the financial crimes what enables the corruption, Without the money, these $30 trillion USD being weaponized in this way, this would not be possible, I mean, Tyler Technologies would not exist starting with that, I mean, what Tyler Technologies is doing, that entity, would not exist. Um, so anyhow, uh. This, uh, article for commentary shifts from the economic angle to the judiciary angle.

Um, so it talks about… it's basically the combination of the two: the financial crimes plus the judiciary fraud. Those topics combine into a single professionally written article, and I took that and I submitted to 450 journals, law journals in the country.

[00:53:00] My goal is not to get published. I know they're not gonna publish it because it would be professional suicide for them I mean, if, if, if you, if you work in a, if you're a law student in Ohio, for example, uh, and you go and, uh, report Tyler Technologies right to the authorities, you will never get admitted to the bar.

It's obvious. Um, so, you know, but if they don't report it, they're violating rule 8.3 that obligates them to report it. So if they're an attorney already, they face disbarment, and if they're not an attorney and they're a student, they will not be admitted to the bar if they don't report it.

Uh, so, you know, it's heavy, it's a heavy leverage for me. So basically what I'm doing here is creating 450 whistleblowers. Mandatory whistleblowers. They don't have discretion. They have to whistleblower, I mean, or face disbarment or not be, or no, on non [00:54:00] admission, right. To the bar. But basically what I'm doing is creating a 450, uh, professional whistleblowers on that profession, on within the law profession at a cost of $3 per whistleblower,

So this was step five. Um, and of course when I, when I did this, um, you know, I get the rejections, uh, but when I get the rejections, I reply and I send them a letter that basically makes them aware that

ISBN 978-1-97-148127-2

they have the obligation to report this Uh, so, you know, they cannot say that they didn't, they didn't know,

Um, they don't notice that they know and that they should report it. So that's step five. Um.

Now let's talk about step six. Step six is an evolution of this. So now that I have this article for commentary, I see, well, you know, this is a nuclear weapon, by the way, after I started doing this thing with the article of commentary, when they saw that I was working on this, because [00:55:00] you know, they have my internet at home intercepted,

Tapped. So when they saw this, on the 25th, then the next day on the 26th Zuleima Villamizar started the conversations of... You know, money and things like that to create the pretext for Judge Oscar Telfair III to evict me from my home. So this was a retaliation that started less than 24 hours after I started working on this white paper on the, on this article for commentary.

Sorry. Um, anyhow, uh, I took the article for commentary and then I did something that is incredible. I mean, I said, and I, I thought it was a, it was a very good move, Solid move. What I did was I started contacting whistleblower firms in the US. So these are firms that, um, no, sorry. Step six was I started contacting the press.

So the Tier-1 financial news outlets, because you know, now I have at least 450 attorneys and law schools. Really, and you know, when I say 450, it's more than that because when you send this to a journal, more often than not, it's not only one person [00:56:00] reading this, This is going to the editorial team of the journal and if the editor of the journal. Or the person responsible for the journal, the chief editor, I don't know, is a professor.

Imagine that, that a professor in a law school, like, I don't know, uh, Berkeley Law is aware of a judiciary RICO enterprise of this scale. I mean, this is nuclear. I mean, how can a law professor not take any action? You know? Uh, so the entire faculty has liability now because this, the, I mean, you know, in the best case for me, because this professor could be the, the, I don't know what it's called, the dean of the school.

I don't know Or a Chair, or a sub chair. I don't know. It could be somebody high up. So it, it's a, it's a type of liability that is not individual. It's organizational. You see, if the person that touches this information. Uh, so, you know, it's not 450 people. I estimate this to be really like 2000 people in 450 schools.

ISBN 978-1-97-148127-2

That's what I estimate, right. [00:57:00] But after I developed that step, I thought, well, you know, but this can be even better, 'cause if I send this to the tier one news media, so for example, the Wall Street Journal, the New York Times, Bloomberg News, I mean, these are news outlets that report on financial, uh, topics on the market, right, on the stock market.

And they have an obligation to inform the public. It's not, it is not any journalist, like, I mean, because if I send this to any, to any newspaper, they have discretion. But if you're, if you're a journalist reporting on financial matters. Right, the stock market, you have a duty to inform the client like you have a duty to the SEC because you are moving the market.

What you write affects the market, or we are what you don't write, So if you're aware of all this level of, uh, risk for the market and you don't say anything, I don't know. I would make, I don't know if not saying anything would be criminal, don't take, you know, I'm not a lawyer. But you know, it's serious, to remain [00:58:00] silent.

Faced with this information. If your job is to write things about the stock market, I mean, if that's what you do for a living, you have a duty. So that's why I picked those, media outlets specifically, the Wall Street Journal, Bloomberg News, things like that. And I sent this to the chief editors.

So far it's been silent. But that's okay. I mean, nobody has replied to me. I sent it to the New York Times, Wall Street Journal, Bloomberg News. I sent it to importantly Mrs. Amy Davidson, and she's, uh, I learned about her from a documentary on Netflix. I was watching Netflix the other day and she's, uh, she's somebody that works at the New Yorker and, um, she used to work with somebody called, I mean, long, long time ago, right.

Uh, Seymour Hersh, I think is the name. And he's a prominent journalist that, [00:59:00] uh, I, I don't know. He was, he was very involved in, in, in, in one of the major … uh, I think it was a scandal related to a massacre of civilians during the Vietnam War, one of those scandals in the seventies. Uh, he was a main figure in that as a journalist, like he, he uncovered a big part of it. Uh, so anyhow, Mrs. Amy Davidson is a prominent journalist and she works at the New Yorker. So I sent it to her and I also sent it to Mr. Hirsch, who is still an active journalist. So now all these journalists, some that have worked on, on, on, you know, RICO Enterprise cases and some that, uh, working financial news are in knowledge of this information.

ISBN 978-1-97-148127-2

Now, I haven't received any responses from any of these, uh, journalists, but they know, And that's the important thing for me, that they know, um, I mean, that's what I'm after, Dissemination of knowledge [01:00:00] and in a way that it's the most trouble that they know, uh, because that could force them to act.

Or if they don't act, then, you know, it may have other consequences. Uh, so I sent it to the journalist, but then after I sent it to the journalist, I took the step of sending it to the DOJ. So I learned that the DOJ has a recently created department that was created like in early 2026. So early, early this year.

Uh, an anti-fraud department and, uh, sorry, an anti-fraud task force. Uh, and there's another department called the NFD something that is also about corruption, Um, so I, I mean, and these are two departments that are a perfect fit for these, for these particular crimes that I'm talking about,

Uh, judicial crimes and corruption, um, and wire fraud, So I sent it to honorable. Colin McDonald, who was just appointed. So yeah, because he's new. I'm, I'm, I have [01:01:00] faith, right, that he, that he will act. 'cause you know, when you're new to a job, first, you're not contaminated with the environment. And I mean, if there's anybody that's corrupt, he's not contaminated by that person because he's just coming into the office.

Uh, and secondly, because when you're new to a job, you generally, uh, want to do the best you can As, as fast as you can because you want to prove yourself good for the job Um, so that's why I sent it to him. And also, there's another person in a very similar situation who is. Uh, his name is Cody Matthew Herche, also recently appointed, and he's on the special task force for, uh, I think it's for, for fraud or anti-fraud task force, something like that.

Right. So I sent it to the DOJ And I sent them everything, including the notice to the, to the journalist, and [01:02:00] to one of the prominent. Professors in the University of Texas, which is one of the most nuclear ones, In terms of the professors in Texas. Um, so now two important people at the DOJ task with, you know, putting these criminals behind bars are acknowledged that everybody knows

Including the journalists. But don't leave because it doesn't, it doesn't stop. Stop there, So the next thing I did, um, let me see one second.

Okay. One second.

Yes. So the next thing I did, oh, sorry. Before, before I tell you that, uh,

ISBN 978-1-97-148127-2

before I tell you that, um, as part of [01:03:00] the, uh, no, yes, no, that's okay. So, so, so we're at the DOJ, So the next thing I did, I started, because, you know, now that I've blew the whistle on, you know, via the OFAC via the SEC, via the journalists and via, you know, and via the DOJ, I mean, I'm like a, you know, four times whistleblower,

Just this week, So, um, I seek the help of, um, something that is called the Government Accountability Project, GAP. And this is a nonprofit organization, as I understand that helps whistleblowers like me, Uh, by, uh, giving them access to legal representation. I'm not asking them to pay. I mean, they have a, they ask you,

When you apply for this program, they ask you, can you pay for the attorney? And I say, yes, I'm willing to pay, I'm ready to pay. Uh, but what I need them to help me with is to set me up with an [01:04:00] attorney that is not compromised by this network that can really represent my interest and help me get my parental rights back.

And also, um. To set up a meeting with the FBI, with the DOJ, with somebody at the DOJ that I know is not compromised. And I applied to this program on March 26th. Uh, so the same day that the escalation of the big three via the 387th court, all, all with all these false pretext started,

So I filed the application, I set the day before filing the application. I sent them a package via FedEx, uh, that arrived on the 26th. So I timed the package. So when I applied, the package was already there. So they already had the evidence in front of them when I, when they received my application via their website Wistleblower.org.

So I did this on the 26th, I applied, I waited no response after I'm at this point that I have already reported, I'm, I'm at a step [01:05:00] six, Um, where now the DOJ is in knowledge that everybody knows. Then I contacted, this was a broader pro lower program, Um, so this was probably on April 1st. On April 1st.

So five days after I applied to the program. Really, I sent them an email. And this email, really what it does is ask them, uh, for triage, it's a request for triage. You know, triage is when you, like, if you go to a hospital, to the emergency room, the first thing they'll do is triage. They will ask you, they, you know, evaluate you to see how grave the situation that you're facing is because they need to know if you're having a heart attack or if you're just have, you know, pain in, in a finger,

ISBN 978-1-97-148127-2

Uh, 'cause they're gonna, they, they have to prioritize, So I imagine they must have a, I mean, I'm talking about, uh, this government accountability project. I'm thinking that they must have a triage mechanism because, you know, they say that they serve 8,000 whistle [01:06:00] blowers a year, so they have to have a way to prioritize them.

Right? 'cause not all the whistle, I mean, somebody will be whistleblowers for things that are, you know, I mean, I don't want to minimize anybody's situation, But something that could affect maybe a group of people, a small group of people, But this is something that is affecting everybody in the world.

I mean, this RICO enterprise that the Chinese have. Um, so I mean, if, you know, I would make the point that this is in the best interest of the public. It's not because of me or because the child is kidnapped. I'm not saying that. What I'm saying is this affects everybody. And if they harm me or they delete the evidence that I have in some way.

Everybody will be harmed and will be continued to be harmed for years, So please, you know, take a look at this, That's basically what I said, and I sent them my resume so they could see that I'm a serious person, I'm not just a, you know, I'm not a crazy person, you know, talking to the walls,

Um, so you know, they have enough background, and they have information, but critically, I send them what I send to the [01:07:00] DOJ. So now they know that the DOJ knows, so they know that this is serious, Because if I, if I took the step of reporting these people to the SEC, to the OFAC, and to the DOJ, it's because, I mean, they have to at least look at this,

So this was on April 1st that I sent that email for triage. The problem is I haven't received anything from them and they saw the email because, you know, when I send these emails, I use a system that is a registered mail provider that tells me when the email is open and I have the receipts that they opened the mail 30 minutes after I sent it.

So I sent it on April 1st at 6:30 AM more or less, don't quote me on the time, but it was around that time and they opened the email at 7:05 AM So they opened the email immediately, 30, 30 minutes after. And I sent it to the CEO of this organization. Uh, and his name is Clark, no, sorry, Louis Clark and I sent it as well to the general council of this nonprofit [01:08:00] organization.

And her name is Mrs. Gray. They open the emails, each one of them, but they have not replied. Now, the reason why I'm telling you all these details is because there is something here that worries me.

ISBN 978-1-97-148127-2

And you know, I I, this is not an accusation, this is not, you know, it's just an observation. Something that I observed that looks odd.

So, let me tell you the reason why I know about this organization is that, because some time ago I watched a documentary on Netflix about, uh, a tragic incident that happened on, on a place called Three Mile. Or Three Mile Island. It's a place where there is an at or was an atomic nuclear or a nuclear plant power plant.

And there was an accident that happened in 1979. So we're talking about, uh, I don't know, almost 50 years, Almost. Yes. 47 years ago, something like that. [01:09:00] This is what I learned about Mr. Louis Clark and the Government Accountability Project. The context in which he's mentioned in this documentary, Netflix, is that in this accident, there was an accident that happened on this power plant,

And there was the whistleblower that blew the whistle on the incident, and there was a huge investigation and the commission, uh, what is it called? The, the NCR, the. National Commission on? No. The nuclear committee. I don't, I, I don't, I don't know the meaning of the three letters, but I think it's NCR.

So it's the, the entity, the, in the federal government that regulates nuclear power. Mm-hmm. Uh, there was an investigation

and, you know, um, there was a whistleblower that was part of that Um, so anyhow, [01:10:00] Mr. Clark, Mr. Louis Clark was a fundamental piece of this sequence 47 years ago. Like he was the one that represented the whistleblower. And then, or before or after, I don't know, he created this organization and this organization became prominent because of that.

And of course, when I saw the name of the organization I mean, when I saw the documentary, I thought, you know, if this person saved this whistleblower 47 years ago, this is the person I need to talk to to recover my son. So that's why I contacted them. But they haven't replied to me knowing how serious the situation is.

And I, I'm guessing, like I, you know, I don't, again, it's not an accusation, But, uh, I'm guessing that in their line of work of defending whistleblowers that are being targeted by RICO Enterprises of any size, um, you know, minutes count because the whistleblower could be assassinated. Uh, and you know, like I contacted them at this point, it's been over a week,

ISBN 978-1-97-148127-2

Because I sent that letter on the 20. They [01:11:00] received the application on the 26th of March, and today is April 4th, and they haven't replied, despite me sending the request for triage, which they read on April 1st. So, I don't know. It worries me. Let me tell you why. Let me tell you what, where my mind is at,

If they're not replying, it's because maybe they're giving me the cold shoulder, Uh, I don't know. It's an accusation, but it could be. But imagine for a second, let's assume for a second that that's the case. Let's work on the hypothesis of the cold shoulder. If it's a cold shoulder situation, uh, what would that mean?

Is that this organization would be compromised. But the problem is that the conversation has been run by somebody who has been running it for 47. Seven at least 47 years. Um, and that was involved in the investigation of that accident. And now that accident is worrisome to me a little bit because that accident had a consequence.

Not deaths, we're not talking about death, nobody died. But as a consequence of that accident, there was a change in the regulations [01:12:00] that basically made it so that no new nuclear plants were built in the United States between 1979 and 2013. So for 33 years, I'm talking about, put that in perspective. So this accident caused a 33 year freeze on nuclear power in the US.

Like there was no increment on the number or, or the output or the throughput of, of nuclear power generation in the US for 33 years. And if you think about it, who would benefit? Well, I mean, it seems obvious to me that the people that would benefit from that situation would be the OPEC. I mean the countries that are doing this, right, China, Russia, I mean OPEC plus, right to be exact China, Russia, Venezuela, and Iran.

And the person that represented that whistleblower that ultimately led to that freeze is ignoring this grave situation. So, I don't know, [01:13:00] again, it's not an accusation, but I mean, I, I have faith, I have faith in people. I think that he will reply, I hope that he will reply and he will help me get my son back.

But if that doesn't happen, Uh, if, if I have a chance to ask why, I would love to know why. Like, what is that I'm not doing that doesn't give me the attention of this organization, Or at least a response. I mean, they can decline, they can say no, you know, we, we can't represent you. But, but you know, they should at least reply,

ISBN 978-1-97-148127-2

So I can move on and find help somewhere else. Um, but anyhow, that, that, that's where it was, Um, so at this point, I think we're at step six or seven, uh, let me check my notes here. What's up?

Report to the DOJ. Yeah, so the report to the DOJ and, and then the whistleblower, the [01:14:00] GAP program, were step seven and eight. Okay. So to the GAP. To the GAP, uh, to the GAP project, So to the Government Accountability Project, I sent everything I had sent to the DOJ, which basically has everything that I sent to everybody,

So the, the, the, the conductors that train at this point is the Government Accountability Project, um, because they have knowledge that everybody else knows, including the DOJ, um, I mean these two officers of the DOJ, Uh, the Honorable Colin, uh, Colin McDonald, and the Honorable Cody, CODY, Matthew Hirsch.

H-E-R-C-H. So that's a step eight in our, you know, in our, in our trained strategy. So for step nine, [01:15:00] um, I emailed the editors again, um, then, I mean the journalist, and then I sent them follow up emails, sending them information about me contacting the DOJ. And me contacting the, the Government Accountability Project,

Which at this point, I think should cement, uh, my stand as a whistleblower, Because if I'm contacting, you know, the, the gold standard for whistleblower, which is in the US I would guess is the, uh, the Government Accountability Project, Uh, because I mean, they've been doing this for 47 years and they were instrumental in, in doing something so huge that it stop nuclear power proliferation in the US for 33 years.

So I sent that to the journalist again, Uh, I mean, the second, like a follow up message. Uh, so, you know, so it's clear that I'm a whistleblower, [01:16:00] Um. But then after that I did step 10. And this is where it really, uh, gets to a new level, Uh, so this is nuclear. Um, so in the US. Uh, at this point, right at this point, I think this is in the US only, uh, there is a breed of law firms that are whistleblower firms.

So these are firms that, um, specialize in defending, uh, whistleblower cases and claims. To recover money from these programs, from the government Uh, 'cause in all these programs, when you submit information, if there is a Recco monetary recovery, the, the, the, the agency that you've reported this to may choose to give you a monetary award based on how much was recovered, A percentage basically, and what the percentage is, you know, I don't know.

ISBN 978-1-97-148127-2

Right. But, um, so these firms work for whistleblowers acting on [01:17:00] contingency, meaning, you know, the whistleblower doesn't have to pay the fees upfront, but if there is a recovery, they get a percentage. I mean, the firms. So what I did, I, I, I selected the top 10 firms in the US. I mean, in terms of their size,

Because to to to, to fight, you know, whistleblower claims involving RICO Enterprises of this size, you have to be a huge firm, Because this could take years, And if you're not receiving money from the, from the, from the party, from the whistleblower, you have to have the resources to sustain this fight,

Against a corporation, an enterprise that could have immense resources because they're a criminal enterprise. So they have to be big, So I picked the top, the, the biggest firms in terms of recovery, number of billions of dollars recovered per year. And I sent them a letter. And this letter was designed as a request for proposal.

So what I was saying in the letter is basically [01:18:00] something along the lines of, you know, uh, I'm aware of this situation. I have the proof, and this is a RICO enterprise, and the claims being made here could lead to recovery, uh, on the order of billions of dollars with B. So that would mean, you know, probably hundreds of millions of dollars to your firm.

So I would like to invite you to send me a proposal on how you can help me. So basically I'm turning the tables here. I'm asking them to convince me to represent me, because of the size of the claims. I sent them that letter, um, to all of them. And, um, well, I have mixed responses, So I think so far the tally is 40% ignore, uh, 40% decline.

They decline to represent me and imagine that, I mean, and I'm, I send them the package that I sent. I mean the, the, the last step, That has everything. It has, you know, it has proof that the DOJ knows that the OFAC knows that the SEC [01:19:00] knows that. Uh, Tyler Technology knows that the judges know that.

The attorneys know, like, you know, the law journals know the professors, the law professors, the economic professors, like everybody knows, right. And still they decline to represent me. But then this is where it gets nuclear. Um, so one of the firms that did this right is one firm called KKC.

That's the abbreviation. I can't, it's, I think it's **Kohn, Kohn & Colapinto**. So that's the first, and they're a huge firm, uh, very prominent and influential in this field. I mean, they influenced the laws that govern whistleblowing.

ISBN 978-1-97-148127-2

So anyhow, I took the, the, the denial or the, the letter declining to represent me and I turned it around, let me tell you how I turn it around. Um, so when they declined, So they send me this reply saying, [01:20:00] uh, reply to your confidential submission, And this is funny because I never asked the submission to be confidential, but I think this is a move for them to say, right, if they get subpoenaed by the DOJ about these records, they will say, we can't give them to you because they're protected by confidentiality.

So the first thing I did was to reply. I mean, I, I did, I did one reply, but I, I did many things So one thing was, uh, I, uh, waived all my confidentiality rights in regards to this submission to this firm, to this request to this firm, because I don't want them to have any excuse to not give this to the DOJ.

It is in my best interest that they give my file to the DOJ or to whoever, to the FBI to whoever asked for this file. I mean, these things, I'm publishing them in the book. I don't, I'm not, I'm not guarding anything as confidential in this sense. Um, so I put it out, out front upfront that I'm not expecting any confidentiality and waiving my legal rights.

Uh, and I also [01:21:00] informed them of their duty that they should know because they're a law firm, right. But I told them explicitly that they have, they have an obligation under rule, under this rule 8.3 to report this to the authorities because these are serious allegations of crimes committed in the courts.

And their authorities register with the bar association of their state, uh, or multiple states, because of their sizes. They're national firms, so they have to have attorneys registered with the Bar associations of multiple states, because otherwise, how can they operate nationally?

So they're obligated to report this to all the bar associations at the very least, and administrators of all those courts because they're seeing the crimes committed using T Technologies, which is the court electronics record system of 24 states in which they operate. So, you know, they can't escape this,

So I asked them to forward my file completely to their general council, I mean, to the general consult of these law firms that are declining to represent me. So now the General Counsel of the firm is aware [01:22:00] of the crimes being committed compromising the integrity of the courts and is aware that they have a duty to report it to the authorities.

I mean, this is, this is, I mean, if I don't win with this, I won't win with anything. Um, because this poisons the entire law firm, the law firm could risk, I mean the, all of them, all the lawyers in the firm,

ISBN 978-1-97-148127-2

as a group… So, you know, to, to pick these targets, what I did was to develop a metric, and this is a bit technical, but I develop a metric of cost per whistleblower.

So what I'm doing is creating whistleblowers, I'm cloning the information into multiple people that have an obligation to report it, and I'm paying a certain amount of money for this, For example, in the case of the law journals. It cost me $3 per law journal, and I can basically create three or four or five whistleblowers that way.

This one is basically, so, you know, if I count all the money I spent, I spent $3,000 in this campaign, but I estimate I must have created at least 10,000 whistleblowers that are obligated to report this to authority. So you see, this is distributed computing at its best. This is what it is,

I'm, I am [01:23:00] splitting the problem, partitioning the problem, and splitting the work into thousands of nodes that are obligated to work. Uh, they have no discretion on where to work for me or not. I mean, they have to report this to the authorities, uh, to the courts and the minister of the courts. Um, so that's what I did.

So this is step 10, So this is one of the most nuclear steps, but you see these firms are in Washington, in New York, There is a problem I still need to solve, which is this, I, you know, I need to connect the global, or the nationwide to the hyperlocal because I still need to get my son back.

Um, so the solution I found for this is to use the same principle, but weaponizing the relationship or the, the potential of a relationship with intellectual property firms, specifically with the intellectual property firm where, uh, um, Terrell Miller works. Now, I've talked about Terrell Miller in one of the demos before.

I haven't talked [01:24:00] about him many times. I think I mentioned him in two demos only. Out of the 132 so far. But Terrell is interesting because Terrell, well, first of all, he, uh, he lives very close to the 2302 Britton Ridge Drive property that my company owns in Lake Point Estate. So he's located, uh, I don't know, 300 feet away from the property where I spent a lot of time. And he's part of this network. I have no doubts about that.

Secondly, his house is in front of the house of Robert Mueller, the former director of the FBI. And this is important for dozens of reasons that are documented in my books. Also, uh, the Terrell Miller has the most expensive property in Lake Point Estate.

ISBN 978-1-97-148127-2

It's a property that is worth over $3 million USD, His house is easily the most expensive house in the, in the compound, in the, in the neighborhood.[01:25:00]

So he's obviously a very prominent intellectual property attorney, and he's part of the network. His house is marked in the geo-index that was leaked by Diosdado Cabello and given to me in 2024. Terrell Miller's house is marked in that database, so, you know, I have no doubts whatsoever. And, you know, there've been incidents in which Terrell Miller passed in front of my Viasat antenna at the exact same moment it was receiving important information related to legal proceedings or intellectual property of mine. I have him recorded on video doing this. I mean, the car that is usually parked in front of his house, I cannot see his face in the recording, but it's that very distinguishable SUV that is parked in the front porch of his house, that looks like a military vehicle, I have that on the recordings at the exact moment when I'm doing something important with antenna, like, you know, filing a court document or things like that.

Um, so, you know, it's, um, but the way I did it was interesting. So what I did was I took my patent application portfolio, the one with the 40 something inventions, and I sent it to him and a couple of other partners in his firm asking for representation, explaining [01:26:00] that I'm being targeted by a RICO, RICO enterprise that is trying to steal these inventions.

And they are specifically an intellectual property firm, so I'm asking them for representation on the intellectual property matters and related matters, meaning the criminal allegations against the RICO enterprise. Uh, and I send them. The book has the four inventions with the patent application numbers in, in the book, and I also sent them the package that I had sent to KKC.

That's all. Now the conductor of the train is Terrell Miller. He's the person that has the highest liability because he knows that everybody else knows, including the DOJ. Also importantly in that law firm where he works, the one of the other partners that I emailed with this information is somebody that used to work at the DOJ, someone named **Naikang Tsao**.

So I mean, Naikang Tsao, who used to work at the DOJ, has no possible excuse to justify not taking action [01:27:00] it, you know, because they worked for the DOJ for five years. He also read the email. So, you know, it's nuclear, But the most important property of this is that Terrell Miller is hyperlocal. He lives in front of Robert Mueller, which is a prominent figure in the scheme to have the child kidnapped because the child was kidnapped the day after I told my former partner, Zuleima Villamizar / Gloria

ISBN 978-1-97-148127-2

Espina, that I was going to report Robert Mueller and Greg Abbot to the IRS, in less than 24 hours the child was taken.

And these intellectual property attorneys that I'm telling you about (Naikang Tsao, Terrell Miller and Vanesa Miller from Foley.com) are now the conductors of the train, and Terrell Miller lives in front of Robert Mueller So, I mean, this is, um. It's checkmate, it's, there's, there's no escape from this, uh, for them Um, so yeah, so that's, so until this point, uh, Terrell Miller is the conductor of the train.

And I say until this point, because I think, you know, for the network… I'm talking now, I'm not even [01:28:00] talking to, to, to the big three and the CEOs of the big three, like I'm talking a higher level above that: To them, I would like to say that it could be worse because I could take this package. I mean, the information I sent to Terrell Miller and I could send it to all the intellectual property firms in the country, for example. And that would be nuclear, because that would put in jeopardy all the patent applications, all the patents that have been granted over the last 25 years. Because if one of those firms, I mean, not one of those firms, but among those firms say that I send this to, I don't know, 5,000 intellectual property firms in the US, Canada, and the UK out of those firms, the ones that are part of, of the network, right, that are marking the geo-index and that the executives have the crypto payments and things like that, that receive the package that would immediately put in jeopardy all the patents that they have worked on that may be in possession of, of the network.

Right? So think about it. I, I mean [01:29:00] you, it is like. Letting go of the basket with the golden eggs, basically. Uh, I think it's a good moment to return the child. Uh, that would be my, my recommendation. I'm not, you know, uh, I'm gonna win this one way or another. Uh, the question is how much are you going to lose,

So, uh, think about it. Uh, it's, you know, it's a good, it's a good, uh, I think it's a good point to, um, you know, to retreat. Uh, I think it's the best option. Uh, I don't know. It's, um, by the way, I have to say something funny and I, I've been doing this conversation like driving. And during my drive, I received a message from the informant.

He told me. He told me, he told me that they, that somebody in their team I don't know. Uh, 'cause I, I, I can't, I can't see the full message. I can only see some, some things about the [01:30:00] message, but it sounds like they're saying right on their side that my capabilities were misunderstood. Something like that.

ISBN 978-1-97-148127-2

Right. I have to, I have to really decrypt the message in full to be able to understand what he's saying. But, uh, it sounds like that … I mean, this is kind of, kind of a confirmation of what I was kinda mentioning at the beginning, That. Uh, uh, I don't, you know, I don't reveal my strategies of what I'm doing, what I'm doing, and I think, I mean, and this kind of confirms that, but I, I thought that, I thought this about this in yesterday or the day before that maybe they think I'm just like randomly sending things to people.

Like, because of course, like if you, if I put myself in their shoes, what they can see is that I'm sending these emails, but they don't understand the logic why I'm sending a specific message to a person and a specific attachment. I mean, they cannot see the logic because I'm not telling them. What they see is the message going through and what [01:31:00] contains, etc, and then I imagine they go and tell the person: "ignore him". But they're not understanding the strategy. I mean, they're not understanding the narrative that I'm building implicitly with these actions and with their inactions. Um, so I, what I did is that before, you know, doing this drive, what I'm recording in this conversation, I created an agenda with all these talking points, and they're all documented in there, and I published in Google Sites: https://sites.google.com/view/demo-d132/home

And I made it public and put it on the YouTube channel. The reason I did this is just in case they consider harming me, because you know… they could take the step of harming me physically. I mean, they're a huge network. I have no way to, I have no protection against them. They could, they could do it, but at least if they do it, there will be something that survives, meaning, the agenda saying all these things.

So to take away the motivation of harming me, I published the agenda. Because it's already public. You know… if it's something that is not public and they know that I'm gonna say it, they could harm me. So that's why I made it public before leaving my home. Um, but anyhow, [01:32:00] um, uh, so, so he, what, what, what I think what he's saying, I have to, again, I have to decrypt the full message.

What I, what I, what I think he's saying is that they saw that public document and they're saying among them that they didn't, uh, really, uh, understand my capabilities, I mean, when I'm sending these messages to people and complaining and reporting them, they didn't understand that there was a strategy to basically show very clearly that they're a RICO Enterprise.

There's no other explanation. They're working together, there's collusion, Um, but now they understand, Um, so anyhow, uh, if you really understood, if you really understood that situation, you

ISBN 978-1-97-148127-2

should understand that I'm going to win this. I'm going to get out of this situation. I'm going to succeed at that one way or another.

So I guess it's a good time to retreat because if you don't retreat, you will leave no option but to send this to all the intellectual [01:33:00] property firms and that will make the patents that they have gotten for you perhaps seizable by the federal government. So, you know, it's like losing all the eggs, all the golden eggs.

Uh, that's the best analogy I can give you.

So, I don't know, I think it's a good time to walk it back. That would be my recommendation. And I hope like that you see that. I mean, I'm, I don't want to sound like I'm selling you this, but I hope that you can see that if I can do this that I've been doing and I have gotten to this point, you should value my recommendation.

You should give it some weight, you know, because, uh, how do I say this? If the recommendation wasn't good, like if I didn't have the skills to give you this recommendation, I wouldn't be in this position today. The reason why I'm in this position is because I can reason these things out,

So now I have to tell you, uh, I also have a technical segment, but I'm going to cut this segment out.

Um, and I'm gonna make the, the technical segment a little bit later, [01:34:00] um, uh, to, to, you know, to rest my voice a little bit because I've been talking for like, it feels like I've been talking like, for two hours. Um, but I'll, I'll, I'll rest my voice a little bit and then I'll do the technical, the technical something, which is very interesting.

But, uh, you know, it's, it's a separate topic and maybe not, may not be interesting for, for, may, may not be of interest to everybody. So I'm gonna put it in a separate segment, but it's still going to be part of this demo D132 and importantly in that segment I'm going to talk about is a set of five. Patent applications that I filed yesterday that I think are going to be fundamental, that they're gonna bring a fundamental change to computing.

And, you know, when I say these things, I'm careful because, you know, I'm, I don't want to sound like I'm selling you the patents, Like, uh, but I need to tell you that I am pretty sure this is transformational for the world of computing as we know it. So please, I invite you to, uh, if you're not a technical, even if you're not a technical person, show this to a technical person because, [01:35:00] and ask them,

ISBN 978-1-97-148127-2

A person, a technical person that you trust, and ask them what they think? Uh, that, that's, that's what I would ask of you if you could. Okay. So with that, I'm gonna close this segment and I'm gonna see you on the next one. Okay. Thank you. Bye.

PART II - The DOJ-Alumni Network

Today is, um, April 8th, 2026 and it is 4:20 AM US Central Time. My name is Reinaldo J. Aguiar Marcano and this is the second part of the declaration, D132. So 132. And for today, um, what I would like to do is to, um, um, continue with, uh, with the previous part, which was, um, about the escalation. Um, really bidirectional, right? They, they started and then I responded. Uh, that it started around March 25th. Um, and until the point I recorded the last demo, which I think it was April 4th, I mean, the first part of this declaration. Um, so that was a, that was what we covered, right? And I described this series of steps, uh, that I took.

It was basically a structured strategy. It is a, a structured strategy that, um, I'm employing to, to expose them, right? And to, you know, to make it obvious, uh, what they're doing. So that's where we left. And in that, in that, in that, in that, um, in that train of thought, um, or in that series of steps, uh, I think we landed on step 12, if I recall correctly. Um. Um, which I think was Kohn, Kohn & Colapinto—I mean, at that point, uh, Kohn, Kohn & Colapinto at that, uh, intellectual property law firm was the, uh, the conductor of the train that I described. Right. Um, the locomotive. Um, but I think, um, sorry, one second. Um, yes.

So the, the, that's the, that's where we're left right now. And I think actually the, the, the last, the last step we talked about was actually Terrell Miller, right. Uh, from Lake Point Estates. And he's that, uh, uh, intellectual property attorney, who is a partner at Foley & Lardner (foley.com), that intellectual property law firm. So that's where we left. Uh, so now I'm gonna tell you a little bit about what, you know, what's the next step, what, what happened after, um, uh, uh, you know, we'll take it, we'll take it from there. Um, uh, so before, before I do that, let me tell you something, uh, interesting here. Um, yes.

Um, so, uh, I wanna, I wanna make a pause here for a second. Um, I'm gonna give you some patent application numbers. Uh, these are patent applications that I filed with, uh, the United States, uh, Patent and Trademark Office. And I'm gonna give you the numbers and what they are about, uh, because I mean, they're gonna be very relevant to this conversation and I don't want them to get lost at the end of the demo. Like these are very important applications. Um, I believe so, and I have them kind of sorted by... By how disruptive they, they they will be. Um, so the first one is, uh, and the format of these patent application numbers is a, is a number with a slash and a comma. It's a kind of a weird format that the, the, the USPTO office uses.

Um, so the first one is 19/640,945, and this is a new encryption method that I invented. Uh, the next patent application number is 19/639,219. And this is a new CPU—a new central processing unit. I invented, uh, the

ISBN 978-1-97-148127-2

architecture for it. Um, and the next one is 19/639,265. And this is a High-Res parametric satellite communication system. And then the next one I'm gonna talk about is 19/639,255. And this is a High-Res parametric cellular communication system.

Uh, these are five out of the 50 that I have filed. But I think, I mean, all of them, many of them, most of them are, are, are going to be very disruptive. But these are foundational, like these are, these are, these are gonna change everything. And I, you know, um, don't take my word for it, right? Like, show these patent applications to somebody that you trust that knows about these technical topics and you know, they will give you their opinion, right? Like, don't trust me, trust somebody that you already trust.

Um, so I wanted to make, I wanted to make that pause. Um, uh, before we continue. So now I have to tell you on the, on the step 12 where we left, right, uh, Terrell Miller. Um, yeah, it is interesting because, um, I mean I discovered this after I recorded that, that part of this declaration, um, that law firm, Foley & Lardner, uh, they are one of the most, um, most, most commonly used intellectual property... uh, so intellectual property firms, they're an intellectual property firm, right. Uh, and they're one of the most commonly used by a couple of companies. Uh, one is Huawei, right? Like these Chinese telecommunication companies that I think one of the top executives was even charged with espionage, uh, recently, no, not too long ago. Right. So this company, put that in perspective, right?

Well, and the other company is, I think, uh, I think it was, don't quote me on this one, but I think it was Lockheed Martin, the defense contractor that, that has that huge, uh, headquarters in California, in Sunnyvale, in front of the Yahoo headquarters. Um, and I know this because I used to drive in front of that headquarters every day. Um, so, um, so, but put this in perspective, right? So Terrell Miller. Terrell Miller, right, who is an, an intellectual property attorney and a partner at this law firm lives, that represents these two controversial companies, and they're controversial... Well, one because executives of the company have been charged with espionage. I'm talking about Huawei, right? The, they manufacture telecom equipment for cellular carriers and for other types of companies. Uh, and then, uh, Lockheed Martin, right? Which is in, in the defense industry, which is sensitive.

Um, so this intellectual property attorney that works in the, supposedly, right in the intellectual property of these companies, lives in front of Robert Mueller, who was a former, who, I mean, who was the director of the FBI several years ago. I mean, uh, and, and you know, not only that, but you know, Terrell Miller's house is marked in the geo-index in the database that was leaked by the Venezuelan intelligence to me in 2024. And I, you know, you can, you, you can check this out in the, in the website. Um, so I mean, it's, um, it's super, I mean, it's first, it's obvious, right? It's obvious. It is obvious the role of Terrell Miller in all this. Um, and it's obvious also that, um, you know, how important it is for this network, right? And, and what they're doing.

Um, but, but this realization, uh, led to a series of, I mean, led to a discovery that is really powerful, uh, that I, I didn't know about this, right? But when I saw this, I started looking into it and it's, it seems to be a thing, right? But when I give you the observation, but I think, of course, it would be the, the role of the authorities to

ISBN 978-1-97-148127-2

investigate this, right? Like, I don't have the resources or the, or the reach or the access to see if, you know, well, first of all, you know, to verify this, and secondly, to see the extent of the involvement, right, um, of these individuals. But it seems that it's, I mean, to this point, it seems obvious to me that this is what they're doing.

So I'm gonna tell you what I've noticed. Um, so in this law firm, Foley & Lardner, one of the partners that work with Terrell Miller is somebody, um, uh, his name is, let me, let me stop you for a second to give you the name. Uh. Because, uh, it is important. Uh, one second. I have it noted here somewhere. Uh, just one second. No, the, the name escapes me. I don't, I don't have it with me. I don't have it in my notes, but, uh, he's, he is a gentleman by the name Naikang Tsao. Uh, he, I mean the, the name sounds Chinese, right? Um. And he's also a partner in this, in this, um, oh, well, I think I mentioned him in the, in the previous segment, right? Like, uh, he is interesting because he was an employee of the DOJ. Right? He was a, I mean, he's a former DOJ official, and he was a litigator there, uh, for five years. And then now he's the partner of this intellectual property firm working for Huawei. Right. And he's Chinese.

I mean, it's a lot, it's a lot of red flags to me. Uh, I mean, I'm saying this not, it's not a racist comment or anything, but you know, like I've been working on this problem for a long time. So when I see all these coincidences, uh, and the way they've been obstructing justice with, you know, in the DOJ and in other places, uh, it's, um, you know, it's, it's kinda something that caught my eye, right. So I started, uh, investigating or researching intellectual property first, because I know the intellectual property firms are, uh... I mean, at this point, until this point, until this started, uh, for a few days ago, I knew already that intellectual property firms are an important part of this network, for obvious reasons, right? Because they, what the Chinese are doing is stealing from intellectual property and they need to defend against the lawsuits, right? So they can't leave that open. But I didn't know the extent of the involvement of the intellectual property attorneys, sorry.

But anyhow, when I saw that Terrell Miller, who has this $4 million house, 300 feet away from, uh, the, the property my company has at Lake Point Estates, uh, and I see this gentleman Naikang Tsao and that he worked for the DOJ, it occurred to me to investigate of these prominent, uh, intellectual property firms that primarily do work for the tech companies of this frequent enterprise. Which we have talked about before. Out of that set of intellectual property firms, it occurred to me to look into how many, or, or, you know, I try to identify partners that work in intellectual property that had been at the DOJ before. That's, that's how this thing started. When I start doing this, immediately I noticed a statistical anomaly. It's, it's a, it's a, it's a huge number. I mean, there's a huge number of individuals in this category that meet the, that meet this criteria. I mean, and the criteria is very complex, and the complexity of the criteria is important because, you know, in statistics, the more complex the criteria, the lower the probability that somebody will meet it. Right? Like, if you make the criteria very, very specific, and it has many conditions, the number of individuals that will match all the conditions is smaller. Right? And it, it gets to a point where it's, you know, and if you find with all these very specific criteria, a lot of individuals or a high percentage of individuals in a set that match the condition. This

ISBN 978-1-97-148127-2

means that there's design behind this, right? Like this cannot be random.

So this is, this is how it started, right? So the number is huge, right? So, you know, to spare you the suspense basically, uh, uh, part I would, I would say that leadership of this network, I mean, it's not, I would say the second level leadership, right? Like, I think there's a political aspect of this above, right, above them. But on the second level, like, you know, the, the vice presidents, right? If you, if I was to put a name, the Vice president committee or vice Presidential Committee of this network is a network of intellectual property attorneys that are partners in these firms that were previously employed by the DOJ. That's basically the, that's basically the, the definition of this RICO enterprise. And this explains many things to me, like after I saw this, um, you know, the, the world that I'm seeing made a lot more sense. Uh, I mean, it makes sense why they partner with intelligence services, because I mean, if they're gonna steal intellectual property in this way, using legal means, and, you know, so they steal intellectual property and then they, they, they patent the inventions as if they were theirs. Right. Or their clients. Um, so it makes sense, you know, this partnership between the intellectual property attorneys and the, the foreign intelligence services. And of course to make this work, it makes sense to employ former DOJ employees because, uh, and I'm sorry to make this so, uh, hyperlocal to the United States. I know, I mean, this is a problem in other countries—I identify the same pattern, the same pattern happens in other countries.

Of course, the United States is the, is the biggest part of the problem because, and this is probably why they are so focused on the United States. It's because if you look at the market of intellectual property litigation, uh, the, the biggest chunk is in the US is like, I, I don't know, I can't recall the numbers. This is like $10 billion in the US versus the second... I mean, the next contender is China with $2 billion, something like that. Uh, so obviously a big chunk of the, of the, of the inventions, uh, rights are in the United States. I'm talking about if you look at the entire planet, right? So that's why the Chinese are also concentrating the US to steal the inventions, basically. Uh, so the name of the game is really the inventions. That is the, that is, that is what they're after, um, more than anything. Right. Uh, and you know, I think this has all implications. Well, I'll, I'll, let's talk about that at the end, right. Um.

But so what they're doing is basically that, right? So it's a, it's a, it's a network of, uh, so what I was telling you is that it's important to employ former DOJ officials because that's the way they obstruct justice. Like if one of the targets like me, right? Wakes up and sees what's happening and tries to report them to the FBI, they will obstruct justice because they, you know, they had been at the DOJ for years and like I have to tell you, they're very high, very, very high level former officials. Like, don't think that these were like just litigators, like there's, in this network, I mean in this matching, this set of characteristics that I'm describing, right? That there are former DOJ employees and then they went out to the practice, the private practice and specifically on the intellectual property side of things and ended up being partners at those firms.

In this group, there are people that were assistant district... people that were district authorities before, you

ISBN 978-1-97-148127-2

know, nationwide, uh, there's people that were, uh, um, I mean, I'm gonna, I have, I'm, I'm gonna give you some specific names, right? And some examples. Uh, but these are very high level individuals. And what I, what I want to tell you is that, think about that, right? Like if somebody who was, uh, you know, uh, the, uh, you know, the assistant district attorney for California, right? For years then goes into this private practice and I start working on IP litigation, uh, as a partner, right? Uh, if some of the targets in California figures out that, you know, Elon Musk or Travis Kalanick or Pierre Omidyar of those people stole their invention and they go to the FBI or that they have them under surveillance and go to the FBI, this person will call somebody at the FBI and will... I mean, because I mean, this person was super high up and for years, right? And he must know people, right? I mean, this institutional knowledge is taken from the DOJ and then put to work for the Chinese in this way. That's basically the TTP and that institutional knowledge is important. And I don't know, like I, I never worked at DOJ, I know I'm not, I'm not even an attorney. But, um, I imagine, right? This is powerful. Like, I don't know, I'm, I'm trying to, to see this in my own experience, right? My own working experience. Like for example, when I was at Google, uh, and you know, I left Google eight years ago, right? Um, but if you ask me today, right? If you, you know, have a conversation with me today, and you, you, you bring to me a problem that you have with a Google product, for example, right? Uh, whatever it is, Google Drive, Google Cloud, Gmail, whatever. It's right. You tell me. You give me a bug, I will, I could tell you exactly who is the person that you need to talk to in Google to make this problem go away. Like, I have that institutional knowledge because I spent nine years at Google, right?

Uh, so I imagine it's the same with these people. Uh, and at Google I wasn't very high up. I mean, I was a staff engineer, but I wasn't a director. Right. Uh, but I imagine it is like employing, like if, you know, if you, if you, if you employ somebody who was a, a principal engineer at Google or, or a, you know, senior director at Google, I mean, that person would have a lot of institutional knowledge about who to talk to to make a problem go away. So that's, that's why this is important, right? Because it's a, it's a tool to obstruct justice. So the targets cannot complain to anybody. Uh, that's, that's the idea. Um, and you know, they have a list of, of, of, of people that are very, um, uh, very high up. Uh, I mean that, that were very high up in the, in that federal, you know, uh, law enforcement slash you know, justice department world, uh, but are now working on these intellectual property firms as partners, right.

Um. So this is, this is a statistical anomaly because it is not possible that all, you know, in all these firms, I mean, I could not find one firm. Let's put it this way. I could not find one firm of these prominent firms that work for, uh, you know, the PayPal mafia companies. Let's, let's call them that way, to simplify that. Do not have multiple partners in the firm that were former DOJ officials. It does. I couldn't find one. Okay. But that's not all. Uh, also, if you look at BlackRock, right, which is the, the monopolistic aggregator of all this, they have some of the most powerful people, I mean, not them directly, but the firms that work for BlackRock directly. There's one that is called Kirkland & Ellis, for example. Or, uh, and I, I'll give you the names in a second. Uh, but they have some of the most powerful former, uh... Um, how do you call this, uh, former DOJ officials, right? Uh, I mean, the ones

ISBN 978-1-97-148127-2

that were, the higher up and the highest concentration is on the firms that work for BlackRock and Vanguard and State Street.

So this tells you that, that, you know, this shows you, this is a TTP, right? And it's not only a TTP, the amount of people that you have that are former DOJ officials and how high they were, is also is something that could be used as a signal for ranking these entities in the network. I mean, you know, if you work the problem backwards, right? Like now that you have the observation and you know that the highest concentration and the highest power firepower in a way, right, is on the ones that work directly for BlackRock. You know, you know how to find important companies, right? Like by looking at where the former, I mean where the DOJ alumni are working in these intellectual property firms as partners, that's basically the same.

Uh, so that's, um, um, that's part of it, right? So, uh, you know, I have, I have a list of, of, of, of notable, um, individuals that fit these very specific criteria. And I'm gonna give it to you, but I, I'm gonna do that at the end of this subsegment, uh, to not get the conversation derailed, right? Um, with names and things like that. But if you're interested in the names, you know, fast forward a little bit until you find that part and, and you'll get the names. Okay? Uh, but now, uh, I'm going to transition a little bit more to, to what happened after I, I realized this because remember I have, um, I have this, this set of patent applications that at this point there are 50 of them. Um, they're published, right? Like I filed the applications with the USPTO, I published the applications, uh, in a book. In a printed book. Uh, and I've been sending those applications to multiple people.

Uh, I mean, the patent applications to disclose that I created these inventions, right? To create a record of the inventions. Uh, so they, the Chinese cannot say that they invented this, right? Because that's, I already know, the informant already told me that they're working on implementing these things to claim that they got there first, right? Uh, but it's not true. I, you know, I have the, the timestamped applications, right? And, you know, I have all this espionage that they do, they're doing documented and I'm sure probably the FBI is watching, right? Um, or somebody must be watching all this spectacle, right? So when they make that claim, it's gonna backfire, uh, because it's gonna prove that they were spying, right? All this time. So, anyhow, um, that's the, uh, yeah, so, so, you know, I have the, the book and, and, and, and those things.

But you know, when I realized... The RICO enterprise is really the intellectual property theft. Right? I mean, I, I, you know, I thought the intellectual property, I mean, I know, I knew it was an important part 'cause I've been a target of it for 25 years, but, um, I didn't know how important it was, right? Like, I didn't understand the importance of this part, of this criminal network. Uh, like if you think of any, any company, right? Those, even if it's not criminal, they have different revenue streams, right? Like, you know, they could have, they could have different products, they could have services, they could have, you know, uh, professional services, et cetera. Right? Uh, and you know, the, the, if you, if you look at the distribution of where the money is coming from, it will have a certain shape, right? What I'm, what I'm saying is that I didn't understand how important this revenue stream for this criminal network is. And it's very important. It's probably one of the most important. So that's

ISBN 978-1-97-148127-2

why the intellectual property attorneys are a big... Uh, you know, leadership part of this, like they are the ones running this thing, at least in the, you know, in, in that high up tier, uh, that I'm describing. I mean, there is a political aspect, right? Of course some, you know, there's, there is, there are international political actors that are putting the money and organizing this, but, and putting the intelligence services to work for them. But, uh, this coalition between intellectual property attorneys and intelligence services, uh, is, um, you know, in a way directed by the, the theft of the intellectual property.

So I'm gonna, I, I want to give you some, some, some numbers, right? Um, uh, so I was doing some research, uh, and if you, uh, you know, I don't agree with these numbers of this. I mean, I, I, I did this research based on numbers that are available from people that have studied these things, right? Uh, I have to tell you, I have reservations about the cap numbers. Uh, I think they're too low. But this is what the official, I mean, not official, but like the numbers that are out there in the public corpus of research say that if you put all the intellectual property together, like all the intellectual property that exists in the world, right? If you put it together and you buy it, I mean, there's, there's a caveat to this, right? Because if you try to buy all intellectual property, there will, there's gonna be inflation, and then, you know, the prices will go to infinite. But take that away for a second. And if you buy it all, like, I want, what I want to try, try, tell you is the value of, intellectual properties, right, the monetary value, you know, you, according to these numbers that I saw, you could say it's around $40 trillion. To put this in perspective, the entire GDP of the United States, which is, you know, arguably the biggest economy in the planet is $28 trillion. So what I'm telling you is that the value of the intellectual property, intellectual property worldwide, according to these metrics that some people have computed, could be estimated to be around... Two times the GDP of the largest economy in the planet. So imagine the amount of value that there is in this region, right? Um, this is, this is what this tells you, um, uh, that there is a, there is a lot of value in this, right?

Um, and of course, this is what, they are siphoning, right? This is why they, they have this RICO enterprise, uh, because they're getting all this value. Basically, they are monopolizing all the patents, right? Um, through the aggregators like, you know, Vanguard and I mean, through the, through the companies that are controlled through the aggregators like Vanguard, BlackRock, and State Street. So that's basically the entire, the entire dynamic of the enterprise. Like, um, basically to give the entire enterprise that the, the, the way it works is, uh, they get the money from the 401k plans, from and from investors in the stock market. Then... Three companies, Vanguard, State Street, and BlackRock, acting as aggregators of all that capital by voting shares on companies, public companies. And, and I mean, I, they probably do the same with the private equity firms, right? Uh, but, you know, uh, let's only talk about the, the, the aggregators.

Um, so they buy shares, voting shares, and with those voting shares, they control the public companies. Right. And then the public companies are the aggregators of the patents. So it's a two-level aggregation system. Right. It's a financial aggregator aggregation at the beginning to control the public companies. And then the

ISBN 978-1-97-148127-2

public companies themselves are aggregators of intellectual property. And this is intellectual property that they're stealing, using the, using the, the, the, the intelligence services of all this coalition of countries that they have. Right. It's Russia, China, Venezuela, Iran, Cuba. So they steal intellectual property. They patent it, right. And then the, the, the public companies own the own, the, the, the intellectual property, but then they're controlled by Vanguard, uh, uh, State Street and BlackRock because they can replace the CEO and the CFO at any time in the ways that I described in the previous, um, segment of this declaration.

So that's basically how it works. Uh, so, you know, when I, when I saw this, it all, it all made sense to me. I mean, the, the things that I've been experiencing for the last 25 years, I mean, the world made sense to me. Um, I understand now. Um, so, uh, but this is where things got really interesting because, um, remember I have that patent portfolio of 15 inventions that are going to be disruptive. And I know this, again, I mentioned this in demo 130. I'm not speculating here. I know this because I get the gossip from the Venezuelan informant that works in the Venezuelan army intelligence. And he already told me multiple times how desperate they are... When they see these patents and when I file new patents, they go, uh, they're like, um, he described the feeling that they get when they see that I'm filing a new patent application. Okay. Um, one second. I'm gonna make it one second. I need to close something. Okay. So, so, yes.

So, and, and the reason I am mentioning the patent applications is because, I mean, this makes it so that it's a perfect weapon for me in the sense that, um. I mean, if the RICO enterprise is directed by the intellectual property attorneys, and I have a portfolio that it's going to be so disruptive, and again, I know this because I get the gossip from the informant. Uh, well, I can use that as a weapon, right? I mean, I can start putting them on notice. I mean, not only the companies, but the intellectual property attorneys themselves who are running the RICO enterprise. I can put them on notice of the patent applications that I filed, and this gives them a legal obligation to respond. This makes all this evidence get into their systems, into their internal systems, and they can't destroy the evidence because that's a federal crime.

Um, and if they don't respond, I mean, they have two choices, right? So they can respond. If they respond, then I send them a notice that says, notice to the agent is notice to the company. Right? Notice, I mean, notice, notice to the agent, it is not, it's notice to the, to the party, right? Um, meaning if one of these companies replies to me... Then that makes it so that automatically the public company that, or the public companies plural, that they represent, are deemed to be on notice of the inventions. And that opens them to immense commercial liability to me. 'cause I can sue them now. Right. They were on notice of these inventions, and if they don't reply to me, then this shows collusion. It shows that they're acting as a RICO enterprise. I'm talking about the intellectual property attorneys. So they have to choose between sacrificing the public companies and giving me the rights of the inventions or confessing basically by their inaction, collective inaction that they are a RICO enterprise. I mean, I'm talking about the intellectual owners. So this is nuclear, it's checkmate like they, they have no escape from this.

ISBN 978-1-97-148127-2

Uh, and this is why I started by giving you the, the, you know, the, the patent application numbers that I gave you at the beginning, because those are the four more fundamental... Two reasons, right? So those are the most, most foundational, uh, patent applications within the set of 50. Uh, in the sense that they're gonna be, I mean, they're foundational to disrupting... I mean, what I mean is they're gonna, they're, they're gonna be important for disrupting what is foundational today in the technology stack that we have in the world. I'm talking about, you know, the Intel processors, the NVIDIA chips, uh, the, the internet itself, the way it works is going to be affected by these patents. Uh, and the most important, almost, I, I think I, I wouldn't say most important, but like the broadest, the broadest application patent here is the encryption patent, the first one I gave you, because everything uses encryption. And this is a new encryption method that I invented, um, that it's superior and it's basically unbreakable.

Um, and again, I'm, I'm not, you know, I'm not speculating here. I know it's unbreakable because this is exactly, I mean, I invented this method of encryption to be able to survive this against the CCP. This is, uh, the way I encrypt my messages and they're not able to decrypt them. They haven't been able to decrypt one message I've sent to multiple people, right? Or one message that I've received from multiple people. The, uh, over a period of I'm, I, I don't know. I've been using this system exclusively for encryption, at least for a year at this point, right? And they haven't gotten one of my messages. And I know that because the informant told me, right, that they are, that they are, they don't know. They didn't know how I did it. Of course, I didn't, I didn't, uh, I didn't patent this invention before. I didn't apply for the patent before because I was treating it as a, um... So in the patent, in the patent world.

There are two types of inventions, right? So you can treat it as a patent, you can try to patent it, right? Which makes it, that you have to publish how you're doing, right? But if you think that it's hard to defend or you don't want to publish it because you don't want your competitors or your adversaries to know how you're doing something, you treat it as a trade secret, meaning you just shut up. You don't patent it, you don't publish it, and you do it secretly. So nobody knows how you're doing it. Of course, if you have a spy, like the thousands that they have, this is hard to, you know, to keep secret. But this one I had chosen for a year to keep it secret, uh, because I, if I tell them how I do it, it's possible... I don't know, I don't think they're gonna be able to break it really, because logic, right? Uh, but it's possible that they, that they may, you know, find a way, right? So I, to be safe, I didn't, I didn't want to publish it. Right. Um. So, yes.

So, but when I see yesterday that, or two days ago, I can't recall that, you know, this network, this frequent enterprise is really a RICO enterprise composed by former DOJ officials that are partners in intellectual property firms. I said, you know, I have to patent this because if I apply for a patent, uh, basically it gives me access to put on notice any company, because every single company in the world uses encryption. So I can send this notice to any company, really, I have no limit. I can send this to anybody. And I mean, it will be a legally binding notice, right? They have to take action. Uh, so I, this gives me access to, in a way, I don't wanna say the

ISBN 978-1-97-148127-2

word attack, right? But I mean, let's say attack, this gives me an angle to legally attack all of the intellectual property firms, all of them. There is nobody safe, right? Because of this encryption, uh, patent application, because encryption is on everything. Everything uses encryption, routers, modems, the internet, your email, your browser, uh, the encryption certificates, the, the protocols, the internet protocols, um, uh, you know, all the messaging applications, everything uses encryption, right?

Um, so, and I, you know, I have to tell you, I love this patent that, I mean this invention, right? Because it's, um, well, first of all, because it allowed me to survive, right? This thing. But secondly, because it's, it's, it's beautifully simple. Uh, it doesn't, you know, I, anybody, uh, I think, right? I haven't, I haven't said this to a person, like explained this to a person yet. But I think, right? I mean, I read this and it's so simple. Like, you don't have to be a mathematician. You don't have to know about encryption. You don't have to, uh, you don't have to. You don't have to be a statistician. You don't have to know about prime numbers, you don't have to know anything. But if I describe to you the process of how this encryption mechanism works, it's so simple and it only uses pure logic. So, um, I think right, a lot of people will see it. We'll see how simple this is and how powerful it is, right. So I want to give it a try.

I wanna tell you here how this encryption mechanism works. And also, I'm gonna use this as a, you know, to anchor my prior art even more because I already sent this even to the European Patent Office. Uh, and of course the USPTO already has the application, right? And it's published in my book, like, you know, the, I already established a prior art, like in, I don't know, 50 different ways, literally, because I sent this application to multiple law firms as well. So, you know, they cannot say that they did it, they invented it, right? But, um, but to make it even stronger, I'm gonna record it here with my own voice, how I, uh, what, what was the invention really. So I'm gonna get a little bit technical on this, okay.

So in the world of encryption, the way it works, or it worked until now, is that to send an encrypted message, you basically first have to share the key. You send the key first, and then after... And there's different ways of sharing keys, right? But the idea is you produce a key in whatever method it is, you use that key to encrypt a message. And then, um, you take that message, um, first you send the key, right? And when the key is sent, then you establish a session, okay? And everything that goes through that session is encrypted. And then when you, when you want to pass a message through that channel, you encrypt it with the key that you know for that session. And then you send the message. And because the other party already has the key or a key that can decrypt messages that were encrypted with this key, then they can decrypt the thing, right? Uh, the messages that go through the channel.

But you see this has two problems. One is that it is synchronous, meaning... That you first have to send the key to be able to send the first message. Uh, and if a man in the middle intercepts the key, they will be able to decrypt anything that passes through that channel. Um, so that is a problem, right? Uh, and also the second big problem is that, um, there is a, there is a correlation between time and space because, um, I mean time and

ISBN 978-1-97-148127-2

time and space with the event of sharing the key or sending a message, right? Because if you share the key, the attacker and a hypothetical attacker can see that you're sending the key and therefore they know where you are, right? Because if they're able to see the communication, it's because they know where you're located. I mean, I'm talking about physically or virtually, right? It could, if there's a cell phone, well, they can see the signal of your cell phone. They know where you are. Or if it's a, a router, for example, that is performing the, the man in the middle attack or they're performing it there. Then they can see the IP address of the network equipment that is communicating with the router. Right? So either way, they, they, they, they, they will know. Right? Um, one second. Okay. Um, so, so yes.

Um, so that, that's problematic, right? Uh, it makes interception very easily, uh, very easy. Um, so let me tell you the, the system I, I invented, right? Um, and this is why I tell you this. I think it's a beauty. I, I see it and I see beauty in this thing, right? And this again, is how I've been doing to communicate. This is what I've been doing to communicate for almost a year at this point. I mean, on the encryption side of things, there's also another invention that I have on the area of transport. But I'm not gonna talk about those, those I'm gonna keep as trade secrets for now. But on the area of encryption, this is what I've been doing. Uh, so it is a different process. So in this system, I'm going to describe, or in this method, you never send a key. So imagine that. I'm gonna tell you a way in which you can encrypt a message and send it and be decryptable by another party without ever sending the key that you used to encrypt that message. Imagine whatever that, I mean, that, that is a, it's a paradigm shift, right? Completely.

So this is, this is, this is how it works. So step number one is that you, you create a key, let's call it key number one, okay? And you encrypt the message, okay? And you send first the message encrypted without sending the key. So this is the first paradigm shift. You are sending the message before the key. You send the message, okay? But the message is encrypted, and the key has never been sent, so they cannot decrypt. Okay? Now. And this is another good property of this system. I'm telling you, it's asynchronous, meaning you don't have to do these things in, in a, in a, in a particular timeframe. For example, you can send a message today and you can send the key tomorrow or in 30 days or in a year from now. They don't know when the actual key is going to be sent. I mean, the attacker, right? The CCP, the CCP in my, in my case, they're, they don't know when, when the key is gonna be sent. So they don't have a way to collide in time in space with a key because they don't know what I'm going to send. I could send it from my home or I could send it when I'm at Walmart, or I could send it any, any time, right? They don't know. So it makes it impossible for them to guess. They will have to be standing next to me 24 hours every second of the day for the rest of my life, and they can't do that, right?

Uh, so, but going back to the process, right? So the first step is you send a message encrypted and it was encrypted with a key, let's call it K1, but you never send that key, okay? Second step is you encrypt another, another piece, you, you take another piece of, uh, you produce another string, let's call it prefix one. Okay? It's a string and it could be anything, right? It's a prefix, and you produce another string that is called a suffix, and it

ISBN 978-1-97-148127-2

could be also anything. Okay? And so basically you send a message for the prefix at a different time after you have sent a message, or even before. You can send it before, but it doesn't matter, right? But the point is that you're gonna send the encrypted message, the suffix and the prefix at three different times. And this means that you could send it through three different channels, or at two, three, or at three different places. You don't have to be in the same place. It doesn't have to be the same channel, and it doesn't have to be at the same time, right?

But you have three different pieces. Now remember, the key number one K1 was never sent. Right. So the last step of this process is that you create another key, key two, let's call it K2. Okay. And this K2 key is designed in a way that it works to decrypt the data block composed by the prefix, the message, and the suffix together. And then you send that key, the key number two, not the key number one. So see, this key number two only works to decrypt the combination of the, I mean the data package that is the combination of the three parts, the prefix, the message, and the suffix, right? But that key K2 does not work for any of those pieces individually. Meaning the message itself cannot be decrypted with K2, with the K, with the key K2, it can only be decrypted with the key K1, which was never sent over the channel, so it's impossible to intercept.

You see here, we successfully managed to transmit a message that is decipherable, but without transmitting the key. And the key that we did transmit cannot decrypt the message and cannot decrypt any of the other two pieces individually. Only if you have the three pieces, you can successfully decrypt this with the other key, with the key K2. So you see it's a complete change in paradigm and it is unbreakable because they don't know when these transmissions are gonna happen in which place on, on which medium, right? You could be transmitting the message over the internet, you could be transmitting this, the prefix of the prefix over ultrasound, and you could be transmitting the suffix over satellite, right? So I mean, they would need, uh, you know, uh, a microphone. Uh, uh, a router, intercepted, uh, and a plane, right? And at this, and have these three man in the middle attackers intercept these three channels at three different times in three different places. It's impossible, right? So this is a, this is a, this is a more secure system of encryption than anything that exists today in the world.

Uh, so this is, this is the, uh, of course it could be adapted to, you know, in this example I'm describing with the plane and the ultrasound. It's an extreme example, right? Kind, kind of the kind of things that a person in my situation has to do. But, uh, this can be adapted to a network protocol, right? Like, I mean, this technology that I invented can be used for a more secure network communication protocol than that, than TLS and all that, right? That, that relies on, on, on, on pre-sharing the key, uh, for a secure session, uh, secure, quote unquote. 'cause it's obviously, obviously it's not secure. Um, but you see this, um, uh, this, this, this is, this is, you know, nuclear, right?

Uh, so of course I filed this patent application yesterday, uh, and I sent it to, I mean, I sent a copy of the patent application to the, uh, EPO, the European Patent Office. Uh, so they also have a record. Okay? But here's where

ISBN 978-1-97-148127-2

things gets get really interesting, and I mean, I think this is kinda, it's a bit ironic and it's a bit funny at the same time. Um, there was an incident, uh, that happened in, on January around January 20, uh, 31st, 2024. So I'm talking more than two years ago, right? Um, and in, and in this incident, um, what happened was, you know, like it's a long story, and I described this in the demo. There is a demo that exclusively talk about this. It was recorded maybe six months ago. But they were attacking my servers using Akamai. Okay. And Akamai is a content delivery network, a big one. Uh, that, that, uh, you know, uh, services, many of these companies that are controlled by the, by the network, right? By this frequent enterprise in the ways that I, I described before.

Um, so they were attacking my company with Akamai. And so I, I, I noticed, I realized that the IP addresses of the attackers were Akamai IP addresses. And I was an Akamai customer at the time. I was paying Akamai for the services, which I understand now, right? It was, they real, they got me to do this so they could get all the traffic from my website and they could, you know, attack it more easily, easily, right? Um, but anyhow, when I see this happen, I created a support ticket and I ask to talk to the chief data protection officer, a gentleman by the name... Jim Casey. And he is, he was former, uh, I mean, before being at Akamai, that position, he was the CEO of Neustar. And Neustar is also a very important company because they control basically the DNS infrastructure of the planet, right? So it's a, it's another aggregator that is important for this network. And he was the CEO of that. And then he went to Akamai. But anyhow, I created the ticket and he starts engaging with me on the ticket, right? On this support ticket, him and the rest of the Akamai team included in a covert manner. Covert meaning there was the, in this ticket there were like 25 people CC'd in the CC field, right? And these were Jim Casey and a bunch of technical people, right?

Um, so what they did, Jim Casey did, was that he included into this long CC list... at the end of the list, he included a gentleman by the name David F. Hine, but he did it covertly. I mean, what he did is that the, I mean, they, right, because this obviously included planning, uh, and, you know, to make this happen, it requires work. This was this, this, this is not happen by accident, right? So the email address of, of, of, of David F. Hine in the label of the email address, it said Work WORK in lowercase. That's how they say it. Didn't say David, it didn't say Hine, it didn't say Vorys, it didn't say anything, right? I've noticed, because I saw the email and I inspected every single email to check who was in there. And I saw there was an email that was not an Akamai email and it says, it said vorys.com. So I go and look what is vorys.com? Surprise, surprise. It is an intellectual property firm, and this was in 2024. I haven't even captured the geo, the, the database that Diosdado leaked to me. Right. So even two years ago, they were already attacking me with intellectual property attorneys, right?

And I, I mean, I, I knew this in 2024, and this is why I tried to contact the FBI in 2024. And I also described this in a previous time. And of course I understand how they blocked me because these people in the intellectual property firms used to work for the FBI, right? And for the DOJ. So of course, they had a way to block me, right? That's how they inserted Agent Cody and Enrique Morales into the equation, right? Because they have contacts at the, at the, at, at the law enforcement agencies, right? Because they were from the, the, from the

ISBN 978-1-97-148127-2

DOJ obviously, right? So, but anyhow, what I'm telling you is that Akamai in 2024 was directly attacking my company, my servers, and then they inserted an intellectual property attorney covertly in the email thread.

Now, the thing about the work, the nomination of the email is important. Why, because this implies collaboration directly from Vorys because the only entity that can set that label is Vorys itself. The law firm, the IT department of the, of the law firm. I mean, for the label work to appear in that email thread covert in that way, necessarily the IT department of Vorys or David F. Hine himself had to make that change. It's not possible for Akamai to make that change. So, I mean, this shows collusion between, uh, David F. Hine, vorys.com and um, uh, David Hine and Akamai, right? And, and Jim Casey. Uh, so, but that, that's what they did, right in 2024. But now this is of course a nuclear weapon for me. I mean, it's, it has been a nuclear weapon forever. But now that I have. Now. Now look at the, look at the board now. Right? That was in 2024. Right? And I tried to contact the FBI and they blocked me. Right?

Uh, but that was in 2024. But now look at the board. In 2026, I have these patent applications going. I have particularly this one about encryption, and I have the evidence of the attack and the collusion of 2024 between Vorys and Akamai. And vorys.com is an intellectual property firm that at this point I have evidence that, you know, there is a serious statistical anomaly of the concentration of former DOJ officials in these type of firms as partners. And, uh, importantly, Akamai relies on encryption for everything they do. Uh, because you know, they have to provide secure communication for their clients because, I mean, it's a, it's, um, I don't want to get too much into the details of what they do, but it's a service that allows, uh, internet companies to serve their traffic faster. Uh, but they, it needs to be encrypted, right? So when you go to Google or when you go to eBay, for example, who's really serving you, the content is not an eBay server, it's an Akamai server acting, acting as a proxy. But they need to be able to encrypt that content to your browser. So this uses encryption.

So this gives me an opportunity to put them on notice about this invention, right? I mean, to notify their legal counsel and to notify their intellectual property attorneys slash former DOJ officials that are helping them, right? Including vorys.com, which is the one that they inserted covertly in 2024. So, I mean, this is nuclear, right? So this is exactly what I did. I send them a notice of obsolescence... uh, so, you know, telling them that their product is going to be obsolete because that encryption is going to go away and they're going to have to license the, the, the invention from me. Um, and in that notice I attach the, the copy of the mail thread in which Jim Casey added David F. Hine in this covert manner. So I'm attaching the evidence of a crime into a legal notice that they're obligated to process, legally obligated. And also they have, uh, the obligation to disclose this to the SEC. And in the same thread, I also attach the reports that I, the formal, uh, referral for criminal activity—wire fraud. Another wire, you know, silencing a whistleblower and things like that, that I sent to the Honorable, uh, Cody Matthew Herche. And. Uh, the Honorable Colin McDonald at the DOJ. So, I mean, it's game over, right? Uh, because they have to respond, they cannot, they cannot ignore me. Uh, I mean, they, they could, but it, it will just basically prove we are all in it, right? If they ignore me, no. So now they have to

ISBN 978-1-97-148127-2

process it, and if they process it, it's game over, right?

Um, so that's what I did. Um, now I also sent a similar notice to other, uh, important networking companies, uh, specifically Cisco Systems, Palo Alto Networks, because they also rely on encryption, right? Uh, and, you know, uh, that encryption that they're using is insecure compared to this thing that I described. Um, so I also send the notices to them. Uh, and I also sent it to Proton VPN, right? Which is an important part of the attacks that Linode Technologies does against the search results to suppress the websites of all the competition in the world. And that is the third leg of the, of the, of the criminal enterprise, right? So, uh, you know, the first leg is, um, the first leg is, you know, the financial aggregators to take the voting shares in the public companies using the investment money of Americans. The second leg is the intellectual property firms, uh, you know, patenting all these inventions that they steal and putting them in the public companies to use them as aggregators of intellectual property. And the third leg is Linode Technologies, uh, which is used to basically suppress. Uh, every possible competitor there could be, right? So, you know, they steal your inventions and they make sure you never make money because you cannot get any exposure on any search engine, right? So, I mean, that's, that's how they control everything, right? That's how they create the monopoly.

Uh, they steal inventions and then they suppress the competitors financially by not allowing them, allowing them to have any exposure, right? And of course, at the same time, they also use intelligence services of the other countries, you know, Russia, China, Iran, Venezuela, and Cuba, um, to hard harass the, the, the, the technologists that are trying to, to do something, right? Uh, and, you know, the romantic partners and all that, like kidnapping the children, like if things go south, they kidnap the child, right? Um, so I mean, this is a, I think, you know, at this point, uh, you know, I see this and I, I, I feel like I have the complete picture. Like I, I, um. Yeah, there's little mystery to me at this point on all this. Um, so, you know, it's, uh, it's an interesting turn of events, really. Um, uh, give me just a second. Okay. Uh oh, sorry. This guy XSS 0304. Okay. Yeah. So let me review here where we are.

So, I don't know, maybe this is a good time to give you, uh, the notable players, right. Um, that I've been looking at. Uh, so I mean, this is, uh, this is important to give you an idea, right? To give you an idea of the, of the level of, of, of the people that they employ as partners in those firms, right. To do this because it correlates with the, with how easy it is for them to obstruct justice at the DOJ or at other places like the SEC and things like that. Um, and by the way, I sent all of them, uh, I mean, at this point I've sent over 400 emails. To partners in these intellectual property firms in, you know, using this technique that I described, like putting them on notice that their clients are going to have, uh, a problem, right? Because of these inventions. Um, so for example, uh, I'm gonna give you some examples. Okay?

So for example, uh, BlackRock and Lockheed Martin use a company called Munger, Tolles & Olson. Okay. And in that company, uh, yeah, sorry. Uh, the, sorry. Before that there is Ahmed J. Davis from Fish & Richardson. Uh, this is an important, one of the important ones. Um, so going back to BlackRock and Lockheed Martin, they use

ISBN 978-1-97-148127-2

Munger, Tolles & Olson. And in there they have a gentleman by the name Donald B. Verrilli Jr. And he, he was the US Solicitor General, uh, and was also, uh, Assistant US Attorney. So, you know, the US Solicitor General, that is a very high level position in the federal government. And so this person was that, right? And now he's a partner in this intellectual property firm.

Um, also on Vorys, on, you know, uh, vorys.com. The, the legal name of that company is Vorys, Sater, Seymour and Pease LLP. And there they have Benjamin C. Glassman. Uh, and he was, uh, the United States Attorney for the Southern District of Ohio between 2016 and 2019. Uh, they also have, for example, John W. Spiegel, who was the Assistant US Attorney for Los Angeles, where Travis Kalanick and Robert Gates, you know, have their homes. Uh, you also have, uh, Daniel B. Levin, former Assistant US Attorney. You have also Jonathan Kravis, who was also a DOJ staffer.

BlackRock also uses a company Kirkland & Ellis, and this one is tremendously important because, uh, it acts as an aggregator of intellectual property. So, I, I don't know, it seems like they're packaging. Bundling together. It's like they're doing the same with the intellectual property as they do with the mortgages. Right? They're bundling them together into huge packages of intellectual property. Um, I don't know how how they transact, transact with them, but they're creating like these, uh, package products with the, with, uh, intellectual property. And Kirkland, they're consolidating them basically. Right? And Kirkland, this firm is part of that effort. And there they have Matthew Galeotti, and he was a former Acting Assistant Attorney General. Imagine that.

Uh, BlackRock also uses another firm called Skadden, Arps, Slate, Meagher & Flom. And there they have Donald L. Vieira, um, who was a National Security Division official. Uh, and they also have a gentleman by the name B. Todd Patterson. Uh, but, uh, so I mean, uh, but this is from Patterson + Sheridan. It's a different firm. Uh, okay.

Another thing I want to tell you is that in this process, I figure out why the clerks, uh, do what they do, right? They, I, it seems to me like they reward the clerks by giving them partnerships in these intellectual property firms. So that's the career progression in the RICO enterprise. If you are a federal clerk and you do something important for the network, you may get a partnership at some point. In one of these intellectual property firms, like many of the, there are a lot of these partners that were at some point clerks in the federal system, but not any clerk, like important clerks, like clerks to like the law clerks of the justices in the Supreme Court. Right. Things like that. Uh, I mean, not the current ones. Like I found examples of people that were clerks of, of Supreme Court justices in the, in the, in the nineties and are today partners in these firms, right? Uh, and there's a firm called MTO, uh, in which 75% of their lawyers are former clerks in the federal courts. So, I mean, they're obviously concentrated on the clerks, right? And it seems to me like they reward the clerks in this way, right? If you, uh, you know, if you work for, for the network, then at the end you get hired and you got, you know, uh, okay, so BlackRock, keeping with BlackRock, with the BlackRock battery of intellectual property firms, um, and you know, like here you can see, right, that this is really a weapon because, I mean, supposedly these companies, BlackRock, Vanguard, and State Street are investment companies. I mean, they should be focusing

ISBN 978-1-97-148127-2

on investing, right, investing for the investors, like they should be focusing on buying and selling a stock. But you can see here the concentration of IP firms that BlackRock is using. I mean, they are, they probably have more IP firms than they have economic firms, and this doesn't make sense because, you know, they're, they're a financial company. They should be having a lot more economic consultants than IP consultants.

So, I don't know, it's, this shows you that the real goal here is to get intellectual property. And again, it's because the intellectual property has a value that exceeds the GDP of the United States. That's the reason. Right. It's gold and also it's the kind of gold that is never, it, it's not exhausted, you know, it's a, it's, it's, it's a renewable resource in the sense that you, it is not like oil, right? That after you burn it, it's gone. The intellectual property you can, you know, keep siphoning money out of the economy for 20 years or something like that. Right? As long as the patent is live. Um, so anyhow, in this other firm, Orrick, Herrington & Sutcliffe that works for BlackRock, they have Joshua Rosenkranz, and he was a clerk in the Supreme Court of the United States... To the associate. So he was the clerk to the Associate Justice William J. Brennan Jr. And his brother, um, a gentleman by the name Nicholas Quinn Rosenkranz, I mean, I'm talking about the brother of the former clerk. Right. His brother. Um, he had a role, a prominent role in the, in the US Department of Justice. He served as, uh, an attorney advisor at the Office of Legal Counsel, the OLC from 2002 to 2004. And they also have in that firm, a lady by the name Amy Walsh. And she was, uh, Assistant United States Attorney, AUSA in the Eastern District of New York.

Also, uh, I have to tell you, Lockheed Martin, Lockheed Martin, this defense contractor that I talked about before, they have, um, a huge overlap in terms of the IP firms that they use with BlackRock. It's basically the same firms. Uh, I mean, that's not a smoking gun, but it's so, yeah. I mean, it's, it's a lot. It's a, it's a big coin, right? Uh, now on Lockheed Martin, I have to tell you, um, when I'm, when they moved me, when this network, this RICO enterprise moved me, and I, I, I documented this in one of the demos before when I go into the details, but they moved me from California, from, sorry, from from Canada, where I was living at the time in 2008 to California using, uh, a job offer they made to me from Yahoo. So they, they lured me to California in this way, right when I arrived to California. I started looking for, for a place to live. And, uh, Alina Nielsen, who is an agent, uh, of this network, she, uh, insistently suggested an apartment complex that was right in front of Lockheed Martin. And, you know, she wanted me to get that apartment. I didn't get it because I thought it was too expensive for me. Uh, I can't recall the price, but at the time, uh, I thought it was too much. Right. And I didn't take it, but she was adamant that that was the apartment that I needed to take.

Um, but I didn't go for it. And it was right in front of the, of the, of the, um, how do you say that? Of the headquarters of Lockheed Martin. And I think there's design behind that, right? Like I, at this point, looking back, I think, you know, it would've been very convenient for the network if I had been in that specific geographical location, right, it would have made things easier for them. I think it's, um, so, you know, I imagine there are targets in that apartment and this, uh, headquarters is the one that is next to the Yahoo office, which

ISBN 978-1-97-148127-2

is at, if, if I recall correctly, it's the address is 701 First Avenue, Sunnyvale, California. So right in front of that, there is a Lockheed Martin headquarters or offices, and that they are right behind a NASA hangar, uh, that is over there. You can't miss it. It's a huge facility, another firm that they all use. I mean this, this, this cluster of Lockheed Martin and BlackRock is, uh, a company that the website is Quinn Emanuel.com. Uh. And it's also, it's also an important company.

Now, I have to tell you, there's an anomaly here that happened that is the following. When I started sending these emails right at, at, at some point, at this point, I have something, I have sent something like 400 emails to partners individually, right? Putting them on notice of one of, or multiple of their clients that they could be affected by these inventions, right? That I discussed before. Out of the, out of the 400, I only have gotten two replies, which is on itself, a statistical anomaly because, you know, like these lawyers, I mean, they're intellectual property attorneys and they're seeing this huge portfolio of 50 very impactful inventions. And, you know, remember I have the pedigree to be talking to them because I was employed by Google as a software engineer for, I don't know, uh, almost nine years. And I, I also was employed by Goldman Sachs as a managing director. Uh, so I mean... they, you should at least consider it, right? Like giving me a quote. I mean, I'm, I'm, I'm offering them business, right? And 400 of them and nobody replies, right?

The only one that replied was Quinn Emanuel.com. But it's interesting because the email they choose to reply to was an email in which I had made a mistake because, you know, I'm sending these emails at high volume, right? I could make a mistake, right? Copying and pasting right? The content of the email. So I made a mistake and I sent, I sent the email to a group of partners at Quinn Emanuel.com, but in the salutation line, I made a mistake and I copied the line from a previous email. So, meaning the names in the salutation line did not match the names in the, the recipients, right? I mean, did not match the emails. So they choose to reply to that email specifically. They didn't reply to any of the other 400 emails, but they replied to this one. And what they replied was just a very short sentence that says, we can't represent you in this matter, dot nothing else, right? We can't represent you in this matter. Seven words, right? They didn't say why, uh, but I imagine, right? If they get questioned by the DOJ, they will say, oh, we couldn't represent him because the salutation line made it clear that this email wasn't addressed to us. Right? So they're gonna say that, you know, they did their due diligence to look at the email, but it wasn't addressed to them. So therefore they stopped reading. They didn't read the notice, right?

But of course the, the obvious question that I would ask if I was the DOJ right, is, okay, but what about the other 10 or 15 emails to the other 10 or 15 partners that he sent that were correctly addressed? Right? Why you didn't reply to those, right? Anyhow, that's, that's probably what they're planning. But when they did this, this is a mistake because they engaged with me and by engaging with me, I then replied with a notice, acknowledging the error in the first email, correcting it, I mean, addressing it to the right people, and then proceeding to tell them that they are on notice because they're engaged. And a notice to the agent is a notice

ISBN 978-1-97-148127-2

to the principal, right? Uh, meaning that their client is considered now legally speaking, to be on notice, right? So they made a mistake by replying to that email, but you know, and they also tested that. Uh, I guess, right, that now they know that I'm going to apply the notice to the agent is notice to the principal every time they reply to me. So they can't reply, really. Right? Because then those companies are going to be bankrupted. Um, so, uh, I don't know. It's a, it's a stalemate basically. They can't move, right? They can't move and not moving shows collusion. Uh, so, you know, it's really checkmate, uh, I will think. Uh, but let's see, let's see what happens. Um, so I don't know. Let me, let me keep going. Um, yes, yes.

So, you know, the, the obvious question for me here is, you know, whether the silence of more than 420 partners... these are not, you know, low-level attorneys or clerks. These are partners at these firms, uh, that many of them happen to be former DOJ officials. And in these notices I'm attaching the formal criminal referrals I sent to the DOJ. If a, if a former DOJ official sees these criminal referrals, they have to act, right? So the question I have to ask is whether the silence from these 400 plus former DOJ officials slash partners at intellectual property firms could be considered as a concert of the minds. The concert of the minds is a concept in RICO litigation that, well, you know, if you're, if you're conspiring with somebody, if you are in, in, in an agreement to, to, to commit a crime or to not act on something that should, you should have act. Uh, so it makes me wonder, right, if this could be enough to show concert of the minds, um.

Let me see what else I have here. Yes. So now I'm going to transition. So I know this part. I think it's, I'm gonna, I'm gonna like, um, I stopped talking about the patent applications and the IP firms, but you know, I wanted to give you our context. And by the way, all these emails that I've sent and the receipts, like I have a system that gives me when a receipt, when they open the emails, uh, all of those are available for download. And I'm gonna post them in a link in the agenda of this segment. And also I'm going to post them next to the video. Uh, so you can download them if you want, right? And you can see the emails and you can see who was contacted and the receipts who opened the emails. Uh, but now I wanna transition to more, uh. Observational things, right? Observational things more on the ground. Like this was like high level. Uh, and I'm gonna transition to more observational things, and then I'm gonna go into the technical topics.

Um, so the next exact thing I have is a thing that happened with State Farm, uh, on March. I think it was March 3rd or March 4th. Don't quote me on the, on the, on the date, but March, early March, 2026, they caused an accident. When I was going to file a document with the Supreme Court of the United States via FedEx, I was going to send the package to the clerk via FedEx. So what they did, because they got desperate, they crashed into my vehicle, so I could not go to FedEx. Okay. Um, so, um. Of course, uh, they dispatched a couple of police officers. Uh, you know, it was a bit, there was a bit of harassment in the incident. But, uh, the important thing is that then they, the agent that crashed into my car created an insurance claim, okay? And I got contacted by the insurance asking me to, um, to, to file a declaration. But remember I had talked about that accident, this quote unquote accident. It was really a, an intentional incident. But I had talked about it, I had described it in detail in

ISBN 978-1-97-148127-2

demo or declaration D120. And in that declaration I also talked about Sinead Strain at Goldman Sachs. And my experience with her at Goldman Sachs as her employee, I was her direct employee.

So I talked about those two topics in that demo. So what I did, and I published this declaration in my book. So what I did to respond to the insurance claim, of course, is that I took that, the transcript of that declaration and I attached it to the, to the, to the insurance claim. You know, like saying I'm not going to, you know, repeat everything I've already said. Here's the transcript, right? But this transcript contains my declarations about Sinead Strain and my experience as her employee at Goldman Sachs. And I was a Managing Director at Goldman Sachs and she was a Managing Director too, but she was my boss. Uh, so anyhow, um, I submit this to the insurance claim. The insurance claim, the insurance company is State Farm. And let me give you, I think I have here, uh, yeah, let me give you the claim number. Okay. Is 53-97K as in kilo, 7-70W as in whiskey. That's the insurance claim number with State Farm. So, um, um. What the insurance did in response to this is that they, well, the first, uh, they didn't respond immediately to my, to my, to my email. Right. Um, but then, um, sorry, one second. Uh, they didn't respond immediately to my email.

Uh, but then after a few days he responded saying, uh, I mean the, the person, right, Ryan something, I can't recall the last name. He said something along the lines of, uh, you know, I can't click on, on links on, on the email, so please send me this on a printed copy to this address. And he gave me a PO box. So, of course, I mean, I've been dealing with this network for, for so long that I know what he's doing. He's, uh, he's trying to force me to file this on paper because a paper copy can be lost, misfiled. Truncated, you know, there's many things that could happen to that paper copy. Right? And there would be no audit trail. And he's basically creating a written pretext to say that he did not process the, not the, the, the declaration, right. That I had, that I had attached. So I replied to him saying, listen, please, I understand what you're doing. You're asking me to file something in paper so it can be lost or misplaced, because it has this declaration attached that talks about Goldman Sachs and Sinead Strain. So I ask him explicitly to not treat my claim any differently, that he would treat the, treat the claim of anybody else. Because, I mean, he was the person in the first place that emailed me, asking me to email him this document. I mean, he gave the instruction to email it to him, but then he's changing his mind and telling me that he cannot click on the attachment. Right. So, I mean, obviously he's changing the procedure because he initiated the procedure. Not me.

Uh, so why is he changing the procedure now? Because he saw what it contains, right? So anyhow, I wanted to give that piece of information because, and, and this is important because those insurance records are pretty permanent. They can't delete them, right? Uh, and they have to be compliant with federal regulations, uh, and state regulations on insurance. So, you know, uh, that declaration is gonna live there for at least seven years. So when this implodes, and, you know, if somebody from the DOJ wants to know more about Goldman Sachs and what happened there, uh, and their connection to the Venezuelan intelligence, please, you know, all you have to do is go to State Farm and ask them for the claim number 53-97K7-70W as in whiskey. And then you will get,

ISBN 978-1-97-148127-2

you know the answer.

The next note I have is that obviously right. Looking at all these, uh, I mean all these things that I've uncovered over the last week, it's obvious to me that uh, the Goldman Sachs IPO team has to be in it, right? I mean, it has to be a fundamental part of this network for two reasons. Number one is that they are basically the factory of CEOs, you know, the same way as Greg Abbott is the factory of judges, right? The reproductive organ of the judges. The IPO team of Goldman Sachs is the reproductive organ of the CEOs because they can create a new company by doing an IPO—a new public company, right? And this creates immediately a company with a billion dollar capitalization and um, a new CEO slash CFO that can then be captured by Vanguard and BlackRock and State Street, you see. So that's one of the reasons, uh, and the second reason is because obviously the RICO enterprise is the intellectual property theft using the intellectual property firms slash DOJ alumni. So it makes sense to have intellectual property teams in these finance companies that power the IPO, that enable the IPO. Because you know, when you're gonna do an IPO for the SEC to approve it, you have to have an analysis done by a company like Goldman Sachs. There are other firms that do this work, but Goldman Sachs is a very prominent one. So I, I'm guessing that, you know, the IPO team at Goldman Sachs has to be part of this also.

I have to tell you on this, when I was employed at Goldman Sachs in the floor where my desk was, there was a space that was very interesting. It was the space of the IPO team. So it was a space in the middle of the floor that had... It was, it had basically it was a closed space made of glass, but it was like tempered glass floor to ceiling. It was like a space within a space, something like that, right in the center. Uh, and it was tempered glass. That was only one way, right? They could see outside, but you could not see inside. You could not see who was inside. I have to tell you the, the two years I was at Goldman Sachs, I never saw one soul enter that room. For some reason it never happened that I saw one face. I don't know why, but Scott Winston and Sinead Strain both told me in different occasions that that was the IPO team and that the, the reason why they had that, that one way, you know, uh, window walls. Uh, or glass walls was because they were a super secretive team, because they were working on things that were confidential because these were IPOs that had not happened yet, and they could move the market and therefore they had to protect the privacy of this information. That's what they told me. But no, I think it's interesting, right? But, uh, that, you know, within this super high security environment, they had an even more secure environment and was surprise, surprise, the IPO team, right? So, I mean, it's obvious to me that the IPO team is a big part of this, right? Uh, there's no other explanation.

The next thing I have is about the orders on the 387th court. And here I'm gonna get a, a little bit more, more on the ground, right? Uh, so this is the 387th Court, Judge Telfair, uh, Judge Bell, uh, that had been harassing me with this, you know, quote unquote family case for a year at this point. More than a year and that half my son kidnapped. Right. Uh, and they have this TTP in which the, this tactic, technique and procedure where they basically create an order, a void order where they can, where they don't have jurisdiction or without giving me due process, without even calling me to a hearing. They create a void order like that. And then what they do is

ISBN 978-1-97-148127-2

that they create multiple versions of that order, uh, two or three versions in some case, and then they hide them using Tyler Technologies, which is a publicly traded company. Part of this RICO enterprise of the judges, of the intellectual property attorneys. Really, the, the owners of the, of the RICO enterprise on the legal side of things are the intellectual property attorneys. Right? So they are the bosses of Telfair, um, and Richard Bell, uh, I mean they command them, they gave them orders, right? Um.

So they create this, this, these, uh, multiple versions of the orders. And the idea is that depending on who asked for the order, they give a different version to a different person. Right. Or entity. So if I ask for the order, they give me something that it's not really an order. So I, I don't think that I'm in danger, right? Uh, if the DOJ ask for the order because they're auditing or questioning them, then they will give them an order that is perfect, right? And then if I try to appeal the order that they gave me, they will use that appeal to call me crazy, because it doesn't match the real order that they have here, you see? So it's a way of basically discrediting me as, as well, because my, my appeals will not match the order that they're hiding. So anyhow, the mistake on this is that, um, and there's a mistake that they made is that, uh, they had to serve me according to the Texas rules of procedures because I'm a pro se litigant and they are obligated to serve me with a copy of each order. And they've never done this right? Uh, I mean, they have to physically mail me in, in a physical letter, the orders, and they never do it because if they do it, I would have proof that they're switching the orders. You see? So this just proves that they're doing this intentional, that's why I'm mentioning it.

Uh, I'm gonna give you the case number here. And some examples. Uh, so the case number is 25-DCV-328122. And if you are the DOJ, what you have to look for is index number seven, index number eight, index number 70, index number 62, index number 77, and index number 82. These are all examples in which they do this thing where they create multiple versions of the orders and then they hide them from the docket. But then you see that after these orders are there, there is no notice to Pro Se litigant issued by the clerk. And then you will see collusion between the clerk and the judge, right? And the attorney and the opposing counsel. And as I said before, these clerks then get rewarded by getting jobs as attorneys in the intellectual property firms, right? Uh, that's basically the career progression of this. Um, let's see what else we have.

Yes, the, the next thing I have is that, uh, I mentioned this in a previous demo. There is a, a, a series of zip codes that are important hubs for this RICO enterprise of the intellectual property attorneys slash um, judges, um, former DOJ officials. That, um, those zip codes, uh, form a very, uh, precise, a straight line on the Mid-Atlantic region of the US. It's basically splitting the country in two halves and the, the headquarters of Vanguard falls in one of these important zip codes. And I'm just telling you this as an observational data point to show you that Vanguard is an important piece of this. Uh, and you know, the link to this, uh, data... Is in the, in the agenda of this demo.

The other data point I have is that I figure out, you know, there was a question in my mind for a long time is why there was such a high concentration of points in the database. I mean, geographical points marked in the

ISBN 978-1-97-148127-2

database that Diosdado leaked to me in 2024, that fall, that fell in Iceland. It didn't make much sense to much sense to me because, you know, Iceland is a region that is not, uh, heavily populated. Like, why, why? I mean, and if you look at the, at the, at the international arena, right? Iceland is not a, a place that figures as a, as an important, you know, you know, you see things about China, about Russia, but you never see Iceland. So why are there so many important, um, points in Iceland? I figured it out. It's because of this technique they have where they change the sign of the longitude of a place. Like the same thing that I described, like when you change the longitude of the house of Robert Mueller at Lake Point Estates, you end up with a point that is marked in the Geo Index in a mountain in China. Or they did the same with the location of Letter Stream, the company that I used for mailing things. If you change the longitude of these points that are marked in this database of the, that fall in Iceland, if you change the longitude, all those points fall in Switzerland. So basically Iceland is the virtual Switzerland. Right is, is the way they mark these points for crypto payments that are super secretive, uh, in a way that, that cannot be tied to people in Switzerland, right? Because they're putting the points in Iceland. Right. But, uh, the bad news for them is that now this is a known and demonstrable pattern, right? So all the authorities need to do is look at these points in Iceland and see where they fall in Switzerland, right? And those are the people that have the crypto payments.

Uh, let's see, what else? Yes. Well, um, uh, the, the last note, you know, it's, it's too obvious at this point, right? Like, uh, uh, I, I, I had a note saying, you know, like if I manage to, to get traction on the law, changes that I am, um, trying to... Um, you know, to put forward, I imagine, and you know, if the SEC, for example, the, if the SEC takes action to, you know, to stop this practice of accumulating control over companies, exceeding 10% of the voting shares without being considered an insider. If the SEC, for example, passes a rule change, I imagine BlackRock is going to sue the SEC on the Supreme Court of the United States. Uh, and they will probably be counting with the pieces that they have in there, like the clerks, like for example, things like that. So, you know, but I mean, at this point it's too obvious to even say it, right?

Uh, now I have to tell you two important things. Uh, remember I told you about that scholarly article I wrote, uh, about the, I wrote two in reality, right? About the RICO enterprise and the article for commentary, uh, that I sent to Law Journals. Yeah, I also sent the book with the patent applications, uh, the, all the 50 patent applications and the, the letters to the DOJ and all that. Uh, I also sent it to multiple journals, to multiple law journals because intellectual property is an area of law and they have a bunch of journals in Scholastica that, uh, that are in that area. Right. So I sent the two things, the, the book of the patent applications and also the article for commentary. Well, I have good news to tell you is that both got picked. By a journal in Washington, a prominent law journal. I mean, this is, this is a fundamental, uh, achievement for me because, well, first of all, I'm not an attorney and it, my, my, my, my, my, my research paper, uh, in, in the, in the Matters of Law and Justice, got selected by a law journal in Washington.

Uh, and you know, I have to tell you a little bit, I want to tell you a little bit about how this selection process,

ISBN 978-1-97-148127-2

work process works. Basically, when you submit these papers, you have to, uh, make it the, make the submission anonymous. So you have to strip or redact anything that could let the reviewer, uh, understand who you are. So I could not say anything about Google, about Goldman Sachs, my name, the case numbers, nothing. Right? So I had to redact all that and I did, and on the patent applications as well, I had to, to remove my name, my address, everything, right? And then they sent these, uh, submissions to multiple independent reviewers who are attorneys that, and or, or technical people in the case if it's a technical patent and the reviewers read it. And so this is peer reviewed. It's not a person, it's not an editor. It's not a, it is not like a journalist making a decision. This is a peer reviewed process.

So imagine what this means. It means that my allegations about the judiciary fraud committed by this RICO enterprise in the 387th court to have my child kidnapped and multiple children in Texas kidnapped, I mean, I'm not the only person they're doing this too. This got reviewed by independent reviewers who are trained attorneys and they thought that this was, uh, something that was worth publishing in a law journal that publishes only once a year in Washington. I mean, this is not a journal that goes out every week. This is something that they do once a year. And they selected my article for publication. So imagine what that means and imagine not what that means to me, but what that means for Judge Telfair, Judge Bell and every other judge that that is helping them. Right? Uh, so this is, um, you know, this is nuclear. Uh, really, um, uh, one second. Yes.

Uh, and also on the, on the patent side of things as well, because this establishes even more my prior art. I mean, this got peer reviewed and, and it also establishes the materiality of these, of these patent inventions. Right? Um, meaning because, you know, the, the, the network, they could say, oh no, we thought this was a crazy idea. We didn't think it was possible. But I mean, if it's selected for publication by a, by a journal, uh, that talks about technology in Washington, uh, how can they say they thought it wasn't, you know, it gives materiality to the inventions. I mean, it gives, it gives, it grounds them. Like it is not possible to say that you thought they were not possible to implement. Right? So I think this is going to be... Um, this is going to be fundamental. So I'm going to close this segment here, uh, to avoid making the recording too long, and I'm gonna record another more technical segment in a bit. Okay? Thank you so much. Bye.

EMERGENCY SUBMISSION FOR FILING: PETITIONER'S EMERGENCY MOTION UNDER RULE 21 TO DIRECT THE CLERK TO DOCKET HIS MOTION FOR A STAY

Subject: In Re Reinaldo J. Aguiar Marcano, Petitioner — Cause No. 26-186

Dear Mr. Harris,

I am formally transmitting for filing the accompanying **PETITIONER'S EMERGENCY MOTION UNDER RULE 21 TO DIRECT THE CLERK TO DOCKET PETITIONER'S MOTION FOR A STAY OF STATE COURT PROCEEDINGS UNDER RULE 21, RULE 23, AND 28 U.S.C. § 1651 PENDING DISPOSITION OF THE PETITION FOR A WRIT OF HABEAS CORPUS**. This formal Rule 21 motion requests that the Justices exercise supervisory authority to direct the Clerk to docket Petitioner's Stay Motion (attached as **Exhibit A** in its exact, unaltered format bearing the physical "Received SEP 1 - 2026" stamp) inside active Cause No. 26-186, which is distributed for the **September 28, 2026 Conference**.

A stay is critical to freeze the status quo, release Petitioner from **116 days of constructive confinement** under a void state warrant that disarms him from seeking counsel, and safeguard a profound national defense interest in his cryptographic technology portfolio (including U.S. Patent Application No. 19/791,414) formally disclosed to senior federal leadership:

- **Sovereign Defense Licensing (DoD Pete Hegseth):** Petitioner has granted a perpetual, royalty-free license to the United States Government for his entire 100-patent portfolio protecting JADC2/F-35 tactical communication keys, which are under active Department of Defense **DFARS 227.7004 Administrative Claims** served on June 3, 2026.
- **Treasury Disclosures (Treasury Scott Bessent):** Formal regulatory disclosures and trading bar demands were served upon the U.S. Secretary of the Treasury on April 1 and July 1, 2026, appertaining to systemic fiduciary breaches and index-weighted defense prime front-running liabilities.
- **SEC Whistleblower TCR Complaint (SEC Office of the Whistleblower):** Active Securities Fraud Complaint under Form TCR (**TCR Submission No. 17871-492-823-882**, August 19, 2026) formally targets Goldman Sachs, JPMorgan Chase, and Morgan Stanley for illegal stock buybacks and Regulation S-K omissions while holding actual knowledge of these patent liabilities, following formal compliance demands served on June 26, August 10, and August 12, 2026.

Pursuant to the Court's rules, I am transmitting: (1) One (1) Original and ten (10) copies of this Cover Letter; (2) One (1) Original and ten (10) copies of the Rule 21 Emergency Motion

(incorporating Exhibit A and Exhibit B); (3) One (1) Original and ten (10) copies of the companion Certificate of Service complying with Rule 29; and (4) Concurrently, as a separate, loose bundle, the actual returned merits document itself: One (1) Original and ten (10) copies of PETITIONER'S MOTION FOR A STAY OF STATE COURT PROCEEDINGS UNDER RULE 21, RULE 23, AND 28 U.S.C. § 1651 PENDING DISPOSITION OF THE PETITION FOR A WRIT OF HABEAS CORPUS, bearing the physical "Received SEP 1 - 2026" stamp, which is re-tendered for docketing nunc pro tunc upon the granting of this Rule 21 Emergency Motion.

Respectfully submitted,

Reinaldo J. Aguiar Marcano, *Petitioner Pro Se*

No. 26-186

IN THE SUPREME COURT OF THE UNITED STATES

IN RE REINALDO J. AGUIAR MARCANO, Petitioner.
ON PETITION FOR AN EXTRAORDINARY WRIT OF HABEAS CORPUS

PETITIONER'S EMERGENCY MOTION UNDER RULE 21 TO DIRECT THE CLERK TO DOCKET PETITIONER'S MOTION FOR A STAY OF STATE COURT PROCEEDINGS UNDER RULE 21, RULE 23, AND 28 U.S.C. § 1651 PENDING DISPOSITION OF THE PETITION FOR A WRIT OF HABEAS CORPUS

TO THE HONORABLE CHIEF JUSTICE AND ASSOCIATE JUSTICES OF THE SUPREME COURT OF THE UNITED STATES:

Pursuant to Supreme Court Rule 21, Petitioner Reinaldo J. Aguiar Marcano, representing himself *Pro Se*, respectfully moves this Honorable Court for an emergency order directing the Clerk's Office to file and docket his *PETITIONER'S MOTION FOR A STAY OF STATE COURT PROCEEDINGS UNDER RULE 21, RULE 23, AND 28 U.S.C. § 1651 PENDING DISPOSITION OF THE PETITION FOR A WRIT OF HABEAS CORPUS* (which is attached hereto as **Exhibit A** in its exact, unmodified, stamped format) on the main merits

docket of Cause No. 26-186, Original. This Motion was originally received and physically stamped by the Clerk's Office on September 1, 2026, but unilaterally returned unfiled, and is attached hereto as **Exhibit A** in its exact, unmodified, stamped format.

I. NATURE OF THE EMERGENCY AND CRITICAL TIMELINE

A. The Immediate Docketing Emergency

This Emergency Motion arises from a dual-layered constitutional crisis of the utmost urgency, combining an immediate procedural blockade with an ongoing deprivation of physical liberty. First, the Clerk's Office has unilaterally refused to file and docket Petitioner's merits-stage Stay Motion, returning it unfiled on September 1, 2026 (the returned motion is attached as **Exhibit A**). This administrative refusal has erected an immediate procedural barrier that completely blocks Petitioner's access to the Justices. This occurs when Petitioner's pending Petition for an Extraordinary Writ of Habeas Corpus (No. 26-186) has been formally docketed and **distributed for the September 28, 2026 Conference**. With exactly twenty (20) calendar days remaining before the Justices evaluate his case, this procedural blockade represents an immediate emergency that requires the supervisory intervention of the full Court under Rule 21.

B. The Broader Emergency of the Case and Constructive Confinement

Second, this procedural blockade directly compounds a severe, ongoing physical restraint. While this Supreme Court proceeding is active, the state trial court's void, unconstitutional civil *Capias* arrest warrant has subjected Petitioner to **116 consecutive days of constructive confinement** inside his office (since May 15, 2026). The state court has held this *Capias* for over 100 days without physically enforcing it, choosing instead to use its perpetual, menace-backed threat of arrest as a coercive tool to keep Petitioner trapped in his office and unable to seek help. This continuous threat of arrest blocks Petitioner's ability to safely travel, secure appellate counsel, or access diplomatic protections on the eve of the September 28 Conference. By refusing to docket the Stay Motion, the Clerk's Office leaves Petitioner trapped in this constructive confinement, disarmed from navigating his Supreme Court docket, and vulnerable to state-court property conversion and arrest. Immediate intervention is necessary to restore the status quo.

C. The Triple-Layer Public and National Defense Interest

Furthermore, there is a profound, triple-layer public and national defense interest stemming directly from the portfolio of patent-pending inventions detailed in Petitioner's Habeas Corpus Petition (specifically Page 17, Section *"V. First Amendment Whistleblower Retaliation and National Security Implications"*). To assist this Court in evaluating the high technological value and national defense implications of the targeted intellectual property, Petitioner formally notes his established professional credentials as a technologist of record: Petitioner is a former Google Search Ranking Staff Engineer, a former Managing Director at Goldman

Sachs, and the named sole inventor on two previously issued Google utility patents of significant commercial and operational relevance (U.S. Patent No. 9,275,419 B1 and U.S. Patent App. Pub. No. 2015/0205766 A1). This established track record anchors the immense gravity of the active, triple-layer public and national defense interests at stake:

1. **Sovereign License Protection:** Petitioner has granted a perpetual, royalty-free, non-exclusive license to the United States Government worldwide to practice and use the entire 100-patent portfolio (including the newly filed and docketed U.S. Patent Application No. 19/791,414[1]) for national defense and governmental purposes. This provides the United States Military and Intelligence communities with unprecedented cryptographic and counter-intelligence geo-indexing defensive capabilities.

2. **Taxpayer Procurement Auditing:** The massive federal-interest technologies in this cluster have been subjected to formal Administrative Claims for Patent Infringement filed by Petitioner under DFARS 227.7004 with senior Department of Defense leadership, encumbering major defense procurement upgrades (e.g., F-35 TR-3 and JADC2). Halting the forced abandonment of these assets serves a vital interest in safeguarding taxpayer-funded defense contracts.

3. **SEC Whistleblower Compliance:** To protect the integrity of ongoing federal regulatory proceedings, this stay is essential to prevent the unconstitutional, state-coerced suppression of Petitioner's active disclosures, including:

   (a) **Institutional Compliance Demands:** Formal, registered regulatory notifications and compliance demands served by Petitioner upon major financial institutions holding massive index-weighted and discretionary equity positions in the targeted defense primes, including:

[1]The entire master portfolio, representing these 100 geocoded and internationally indexed defensive inventions, is preserved in the public interest and available for download at `https://www.isbn9781971481296.com/`.

i. **The Goldman Sachs Group, Inc.:** Served on June 26, 2026, via cryptographically verified Registered Electronic Mail (RPost) delivered to Chief Compliance Officer Michael Schlee and General Counsel Kathryn Ruemmler (published as Appendix H, Page App. 29a of Petitioner's docketed Supreme Court Petition in Cause No. 26-186[2]);

ii. **JPMorgan Chase & Co.:** Served on General Counsel Stacey Friedman, external counsel Sullivan & Cromwell LLP, and registered agent CT Corporation System (delivered on August 10, 2026 under FedEx Tracking No. 875435880634 and USPS Certified Mail Tracking No. 9202890142980493762368); and

iii. **Morgan Stanley & Co. LLC / E*TRADE:** Served on Chief Legal Officer Eric Grossman and General Counsel Anne Tennant via registered agent The Corporation Trust Company (delivered on August 12, 2026 under FedEx Tracking No. 875516994398 and USPS Certified Mail Tracking No. 9202890142980493852328);

(b) **Cabinet-Level Disclosures:** Formal cabinet-level regulatory notifications actively submitted by Petitioner to:

i. **The United States Secretary of the Treasury (Scott Bessent):** Submitted on April 1, 2026 (via FedEx Tracking No. 380069718190) and July 1, 2026 (appertaining to mandatory trading bars, systemic fiduciary failures, and front-running disclosures by major institutional investors); and

ii. **The United States Secretary of Defense (Pete Hegseth):** Submitted on June 3, 2026, appertaining to the JADC2 Tactical Communications System and formal administrative claims under DFARS 227.7004;

[2]See *In re Reinaldo J. Aguiar Marcano*, No. 26-186 in the Supreme Court of the United States (filed July 16, 2026), Original Petition for an Extraordinary Writ of Habeas Corpus, Appendix H, Page App. 29a, available on the Court's web portal at: `https://www.supremecourt.gov/DocketPDF/26/26-186/418936/20260814074533144_20260814-073658-00002047-00005165.pdf`.

(c) **Securities Fraud TCR Filing:** A formal Securities Fraud Complaint under Form TCR officially filed by Petitioner with the United States Securities and Exchange Commission (SEC) Office of the Whistleblower on August 19, 2026, under TCR Submission Number 17871-492-823-882, documenting systemic fiduciary breaches, material Regulation S-K omissions, and illegal stock buybacks by major financial institutions (Goldman Sachs, JPMorgan Chase, Morgan Stanley) holding actual knowledge of these patent liabilities.

II. THE PROCEDURAL POSTURE AND CLERICAL ERROR

On August 29, 2026, Petitioner submitted his formal *PETITIONER'S MOTION FOR A STAY OF STATE COURT PROCEEDINGS UNDER RULE 21, RULE 23, AND 28 U.S.C. § 1651 PENDING DISPOSITION OF THE PETITION FOR A WRIT OF HABEAS CORPUS* inside active Cause No. 26-186, Original. The motion was received by the Clerk's Office on September 1, 2026, and physically stamped "Received SEP 1 - 2026" on the Cover Letter.

On the exact same day, Deputy Clerk Robert Meek unilaterally returned the papers with a brief form letter. A photocopy of this physical return correspondence, dated September 1, 2026, is attached hereto as **Exhibit B**. To ensure absolute compliance with the formalities of this Court, a literal, verbatim transcription of this letter and its formal Certificate of Transcription are set forth in **Exhibit B**.

To preserve the physical record of this filing and the Clerk's administrative gatekeeping, Petitioner submits two separate and distinct exhibits to this Emergency Motion:

- **Exhibit A:** A photocopy of the exact, returned Cover Letter, Stay Motion, and Certificate of Service bearing the physical "Received SEP 1 - 2026" stamp. Petitioner declares under penalty of perjury that this exhibit is a true, correct, and completely **unmodified** copy of the exact document returned by the Clerk. Not a single word, date, or signature has been altered.
- **Exhibit B:** A photocopy of the administrative rejection correspondence signed by Deputy Clerk Robert Meek, dated September 1, 2026, its formal literal transcription, and the companion Certificate of Transcription, submitted strictly for the Justices' supervisory review of the Clerk's office actions.

As demonstrated below, the Clerk's Office made a fundamental, mechanical error. They conflated a Rule 22 individual-justice emergency application in No. 26A39 with a Rule 23 full-Court motion for stay in the active, docketed No. 26-186, and improperly mischaracterized a formal merits-stage motion as a redundant pre-docketing application.

III. THE SYSTEMIC CLERICAL ERRORS IN THE CLERK'S SEPTEMBER 1 CORRESPONDENCE

A close examination of the Clerk's September 1, 2026 rejection letter (**Exhibit B**) reveals a series of severe clerical errors, omissions, and formal mischaracterizations. While the Clerk's Office enforces an incredibly strict standard of correctness, form, and formalities

upon *pro se* litigants—often to the point where technical formatting rejections can delay vital constitutional protections—strictness must be a two-way street. The presence of these multiple, simultaneous errors in the return letter demonstrates that the returned papers were subjected to a rushed, mechanical administrative filter rather than a careful, individual review on their procedural and jurisdictional merits.

A. The Procedural Mischaracterization of the Filing

In his September 1, 2026 letter, the Deputy Clerk refers to Petitioner's filing as *"your application received on September 1st."* This is a profound and indefensible mischaracterization.

The document in Exhibit A is explicitly and prominently titled: *"PETITIONER'S MOTION FOR A STAY OF STATE COURT PROCEEDINGS UNDER RULE 21, RULE 23, AND 28 U.S.C. § 1651 PENDING DISPOSITION OF THE PETITION FOR A WRIT OF HABEAS CORPUS."* It is an authorized procedural Motion filed under the active, pending merits docket of Cause No. 26-186, Original.

Conversely, No. 26A39 was an *Emergency Application* filed on July 11, 2026, under a standalone miscellaneous docket. In accordance with the Clerk's explicit guidance at the time, that application contained a prominent Statement that clearly distinguished its emergency, pre-docketing nature:

> *"In accordance with the Clerk's guidance, this filing is submitted as an Emergency Application for a Writ of Injunction and Stay under Rule 22 and Rule 23.3, and*

is separate from any petition for an original writ of habeas corpus under Rule 20."

There is no legal or procedural basis to confuse these two documents. No. 26A39 was a standalone, single-justice application seeking an immediate emergency injunction to protect the status quo before any Original Habeas petition was docketed. The returned Motion (Exhibit A) is a Rule 23 Motion to the full Court in a docketed, distributed case. Labeling a formal, merits-stage Motion as an "application" to justify a summary rejection is an abuse of administrative discretion that denies Petitioner his statutory and procedural rights.

B. The Unilateral Truncation and Omission of the Motion's Title

Second, in his letter, the Deputy Clerk lists the subject of the returned document as: *RE: "Motion for a Stay of State Court Proceedings"*. This is a unilateral and highly inaccurate truncation of the actual title of Petitioner's filing.

The returned motion was explicitly titled: *"PETITIONER'S MOTION FOR A STAY OF STATE COURT PROCEEDINGS UNDER RULE 21, RULE 23, AND 28 U.S.C. § 1651 PENDING DISPOSITION OF THE PETITION FOR A WRIT OF HABEAS CORPUS."* By stripping the specific, formal references to Rule 21, Rule 23, and 28 U.S.C. § 1651 from the title of **Petitioner's** motion, the Clerk's Office stripped the document of its procedural and jurisdictional identity. This systematic omission of the jurisdictional rules under which the document was filed allowed the Clerk's Office to easily and mechanically mischaracterize it as a redundant "application."

C. The Name Mismatch and Style Discrepancy

Third, in his September 1, 2026 letter, the Deputy Clerk addresses Petitioner as "Reinaldo Marcano" and lists the style of the case as "In Re Reinaldo Marcano."

However, in the docketed Supreme Court Petition, in all five (5) Texas state courts, and in the physical identification of Petitioner, his legal name is explicitly spelled as **Reinaldo J. Aguiar Marcano**, and the official style of this Original Action is **IN RE REINALDO J. AGUIAR MARCANO, ORIGINAL**.

Misspelling Petitioner's name and truncating the style of an Original Action carries severe risks of administrative misrouting, deprioritization, and legal mischaracterization. This discrepancy further demonstrates that the returned papers were subjected to a rushed, mechanical administrative filter rather than a careful, individual review on their procedural merits.

IV. THE EXISTENTIAL JURISDICTIONAL TRIGGER: THE DISTRIBUTION OF NO. 26-186

The Clerk's rejection assumes the returned Motion is substantively identical to No. 26A39. This is incorrect. The returned Motion is based on an **entirely new, independent, and existential justification for a stay** that did not and could not exist on July 11, 2026: **the actual docketing and distribution of No. 26-186 for the September 28, 2026**

Conference. Indeed, according to the Court's official records, the docketing of Petitioner's Habeas Corpus Petition (No. 26-186) did not occur until **August 13, 2026**. It was physically, legally, and procedurally impossible for Petitioner to file a merits-stage Stay Motion inside a case that was not even created or recognized on the Court's docket until August 13, 2026, long after Justice Alito's July 15, 2026 denial of No. 26A39.

The existence of an active Supreme Court docket distributed for conference imposes a strict constitutional mandate of **Equality of Arms** (*Wardius v. Oregon*, 412 U.S. 470, 474 (1973)). Due Process cannot exist when one party is subjected to state-enforced physical confinement that strips them of the resources to litigate their case, while their adversaries enjoy unrestricted mobility, access to counsel, and the coercive police power of the state.

As clearly detailed in Exhibit A, because of the live state *Capias*, Petitioner is trapped in **constructive confinement** inside his office, unable to safely exit or travel without facing immediate roadside arrest. This confinement directly disarms Petitioner from prosecuting No. 26-186:

- It prevents Petitioner from physically meeting with experienced appellate counsel to secure representation for No. 26-186;
- It prevents Petitioner, as a dual U.S. and Canadian citizen, from safely traveling to the nearest Canadian consulate to seek diplomatic protection; and
- It prevents Petitioner, as a recognized "Protected Person" under the 1951 Refugee Convention, from physically accessing the United Nations High Commissioner for Refugees (UNHCR) to seek treaty-based intervention.

If the respondents are permitted to litigate Cause No. 26-186 with full mobility and legal advice while Petitioner is held trapped in his office under active threat of arrest and denied access to professional legal representation, **no fair or constitutionally valid adjudication can occur**. The prospective jurisdiction of this Court is rendered a complete nullity because a distributed Habeas Corpus proceeding cannot be litigated under such unconstitutional, structurally unequal conditions. This is a novel and powerful justification for a stay that is entirely separate from the merits of No. 26A39.

V. THE ULTIMATE CONSTITUTIONAL PARADOX: THE DENIAL OF DUE PROCESS INSIDE A HABEAS PROCEEDING CHALLENGING THE DENIAL OF DUE PROCESS

This **Emergency Motion** presents the **ultimate constitutional paradox**. Petitioner's original Habeas Corpus Petition (No. 26-186) raises four out of four Questions Presented that are fundamentally about how state-court administrative and procedural traps—such as the bad-faith evasion of personal service and the administrative suppression of recusal dockets for 169 days—have been weaponized to deny Petitioner due process.

If the Clerk's Office is permitted to apply an unauthorized, mechanical gatekeeping filter to block Petitioner from filing a formal, merits-stage Rule 23 Stay Motion, **the Clerk's Office would be actively completing the very due process deprivation that Petitioner has brought to this Court for review.**

It would create an insurmountable procedural barrier and a deep constitutional paradox for a citizen to be denied the right to file a procedural stay motion *inside a Supreme Court Habeas Corpus proceeding* that challenges the denial of his liberty without notice (without Due Process). The Clerk's Office has no authority to summarily decide the merits of Petitioner's "Equality of Arms" stay arguments. That supervisory authority belongs exclusively to the Justices of the Supreme Court of the United States.

Petitioner respectfully submits that the Honorable Chief Justice and Associate Justices of this Court are the ultimate line of defense to protect the prospective jurisdiction of the Court and safeguard structural Due Process. By directing the Clerk to docket the returned Stay Motion, this Court ensures that its own merits-stage proceedings remain a sanctuary of constitutional protections, and that a self-represented whistleblower is not silenced by local state-court dockets during a pending high-court review.

VI. CONCLUSION AND PRAYER

For the foregoing reasons, Petitioner respectfully prays that this Court grant this Emergency Motion under Rule 21 and issue an order:

1. Directing the Clerk's Office to file and docket Petitioner's exact, unmodified Stay Motion (attached hereto as **Exhibit A**) on the main docket of Cause No. 26-186, Original; and

2. Directing that said Motion be docketed *nunc pro tunc* as of its original receipt date of **September 1, 2026**, to preserve Petitioner's priority of filing, based on the administrative conflation, truncation, and name-mismatch errors documented in **Exhibit**

TRANSMITTAL AND SUBMISSION OF PETITIONER'S MOTION FOR A STAY OF STATE COURT PROCEEDINGS UNDER RULE 21, RULE 23, AND 28 U.S.C. § 1651 PENDING DISPOSITION OF THE PETITION FOR A WRIT OF HABEAS CORPUS

Subject: In Re Reinaldo J. Aguiar Marcano, Petitioner Pro Se
Reference: Cause No. 26-186, Original

Dear Mr. Harris and Mr. Meek,

I am writing to formally transmit and submit for filing the accompanying **PETITIONER'S MOTION FOR A STAY OF STATE COURT PROCEEDINGS UNDER RULE 21, RULE 23, AND 28 U.S.C. § 1651 PENDING DISPOSITION OF THE PETITION FOR A WRIT OF HABEAS CORPUS**.

Pursuant to the Court's rules, I am transmitting the following documents for filing:

1. One (1) Original and ten (10) identical photocopies of this Cover Letter;
2. One (1) Original and ten (10) identical photocopies of the **PETITIONER'S MOTION FOR A STAY OF STATE COURT PROCEEDINGS UNDER RULE 21, RULE 23, AND 28 U.S.C. § 1651 PENDING DISPOSITION OF THE PETITION FOR A WRIT OF HABEAS CORPUS**; and
3. One (1) Original and ten (10) identical photocopies of the companion **Certificate of Service** (complying with Supreme Court Rule 29).

All documents are prepared on standard 8.5 x 11-inch white paper, in 12-point type, double-spaced, and secured in the top-left corner in complete compliance with Rule 33.2. I respectfully request that the Clerk's Office docket these transmittals on the 26-186 docket and submit them to the Justices of the Court for their consideration.

Respectfully submitted,

IN THE SUPREME COURT OF THE UNITED STATES

IN RE REINALDO J. AGUIAR MARCANO, ORIGINAL
Petitioner

PETITIONER'S MOTION FOR A STAY OF STATE COURT PROCEEDINGS UNDER RULE 21, RULE 23, AND 28 U.S.C. § 1651 PENDING DISPOSITION OF THE PETITION FOR A WRIT OF HABEAS CORPUS

TO THE HONORABLE CHIEF JUSTICE AND ASSOCIATE JUSTICES OF THE SUPREME COURT OF THE UNITED STATES:

Pursuant to Supreme Court Rule 21, Rule 23, and 28 U.S.C. § 1651 (the All Writs Act), Petitioner Reinaldo J. Aguiar Marcano, representing himself *Pro Se*, respectfully moves this Honorable Court for an immediate, temporary stay of all underlying state court proceedings in the 387th Judicial District Court of Fort Bend County, Texas, in Cause No. 25-DCV-328122, pending this Court's disposition of the Petition for an Extraordinary Writ of Habeas Corpus currently distributed for the September 28, 2026 Conference.

This Motion seeks to stay the unconstitutional, ongoing threat of a void civil Capias order. While the physical execution of the Capias has been selectively deferred, its perpetual
