Dear Mr. Johnson, Mr. Jablonsky, Mr. Schoellhorn, Mr. Eisenhut, Mr. Marshall, Mr. Murphy, Mr. O'Toole, Mr. Lin, Mr. Kargieman, Mr. Nash, Mr. Moore, and Mr. Davis,

This letter serves as formal notice that a comprehensive portfolio of patent applications has been released as a defensive publication to establish definitive prior art in the fields of **satellite vision systems**, **orbital computer vision**, and **optical ground-to-space communications**. This technical record, titled *"Be Water, Be Light: Portfolio of Patent Applications Submitted to the USPTO"* (ISBN: 978-1-97-148129-6), has been accepted for publication in the *International Journal of Law, Ethics, and Technology*.

1. Anchors for Technical Disclosure The following patent applications, formally filed with the USPTO between March 6 and March 9, 2026, serve as the technical anchors for this notice:

- **USPTO # 19/559,745: System and Method for Covert Communication Using Arrangements of Satellite-Observable, Distinctively Colored Objects.** This invention utilizes a novel form of visual steganography, encoding messages by physically arranging movable objects on the Earth's surface to be read via satellite imagery using computer vision to extract intelligence from orbital photography.
- **USPTO # 19/559,656: Method for Covert Communication via Satellite Vision Systems.** Discloses a system for creating large-scale visual patterns on the Earth's surface timed to activate only during the brief window when a specific imaging satellite is passing over.
- **USPTO # 19/641,125: A System and Method for High-Radix Parametric Optical Ground-to-Space Communication.** Defines a high-bandwidth optical downlink and uplink architecture for ground-to-space data exchange.
- **USPTO # 19/639,265: A High-Radix and Parametric Satellite Communication System.** Architecture for satellite-based data transmission utilizing high-radix encoding to maximize throughput.
- **USPTO # 19/559,972: Method and System for Communication via Passive Reflection from Non-Cooperative Orbiting Objects.** A computational engine that predicts the trajectory of orbiting objects to use them as passive reflectors for directed radio signals.

2. Formal Notification to the European Patent Office (EPO) On April 7, 2026, a formal notification was delivered to the **European Patent Office (EPO)**, specifically addressed to Vice President Rowan and Director Philpott of Directorate-General 1. I have formally requested that this 721-page specification be indexed as **Non-Patent Literature (NPL)** within **Technical Clusters G06F and H04L**. This ensures examiners cite this work as prior art during the examination of any applications related to satellite imaging payloads, optical buses, or orbital trajectory computation.

3. Strategic National Security Status and U.S. Government License Recognizing the foundational nature of these inventions for national defense and orbital security, I have granted a **perpetual, worldwide, no-fee license** to the **United States Federal Government**. This grant was formally communicated to the **Honorable Heidi Shyu**, Under Secretary of Defense for Research and Engineering, designating this IP as a **strategic national asset** to ensure the United States has an unencumbered right to this technology.

4. Implications for Product Roadmaps This disclosure has significant implications for the product roadmaps of companies operating in the Earth observation and satellite intelligence sectors. Major international legal representatives, including those specializing in space and satellite regulation, have been notified to ensure this technical record is considered during current and future patent filing cycles.

I remain available to provide the full high-resolution digital version of record to your technical and legal reviewers upon request.

Respectfully,
Reinaldo J. Aguiar Marcano
Forensic Systems Architect
