This letter serves as formal notice that a comprehensive portfolio of patent applications has been released as a defensive publication to establish definitive prior art in the fields of **forensic corporate auditing**, **attributed control detection**, and **asynchronous secure communication**. This technical record, titled **"Be Water, Be Light: Portfolio of Patent Applications Submitted to the USPTO"** (ISBN: 978-1-97-148129-6), has been accepted for publication in the *International Journal of Law, Ethics, and Technology*.

1. Anchors for Technical Disclosure (Tax Litigation Context)

The following patent applications, formally filed with the USPTO in early 2026, serve as technical anchors for this notice, providing foundational solutions for investigative tax auditing and secure litigation data management:

- **USPTO # 19/632,333: System and Method for Attributed Control Aggregation and Influence Detection.** Discloses a resilient "Identity Fingerprint" and "Influence Smearing" algorithm designed to traverse corporate ownership graphs and attribute direct/indirect control. This technology is a foundational tool for **piercing the corporate veil** and identifying "real interest" holders in complex, multi-layered shell structures.
- **USPTO # 19/640,945: Asynchronous Secure Communication with Post-Hoc Key Derivation.** Provides a cryptographic method for the secure exchange of sensitive litigation files. By decoupling data transmission from key derivation, this protocol ensures that high-value tax evidence and client communications remain resilient against interception even in contested digital environments.
- **USPTO # 19/559,957: Method and System for Power Holder Analysis in Social Networks.** Defines an analysis engine that identifies "indispensable bottlenecks" and centers of control within organizational dependency graphs, enabling forensic auditors to locate the true decision-makers within evasive corporate structures.

2. Formal Notification to the European Patent Office (EPO)

On April 7, 2026, a formal notification was delivered to the **European Patent Office (EPO)**. I have requested that this 721-page specification be indexed as **Non-Patent Literature (NPL)** within **Technical Clusters G06F and H04L**. This ensures that EPO examiners cite this work as prior art during the examination of any future applications related to ownership tracing algorithms or secure data link layer protocols.

3. Strategic National Security Status and U.S. Government License

Recognizing the foundational nature of these inventions for investigative auditing and national security, I have granted a **perpetual, worldwide, no-fee license** to the **United States Federal Government**. This grant was formally communicated to the **Honorable Heidi Shyu**, Under Secretary of Defense for Research and Engineering, designating this IP as a **strategic national asset**.

4. Implications for Litigation and Auditing Practice

This disclosure establishes an undeniable public record that removes "plausible deniability" for entities attempting to patent these forensic and security technologies for exclusive benefit. As a leading firm in tax controversy and investigative litigation, Chamberlain Hrdlicka is hereby notified to ensure this technical record is considered during current and future patent filing or client advisory cycles.
I remain available to provide the full high-resolution digital version of record to your technical and legal reviewers upon request.

Respectfully,

Reinaldo J. Aguiar Marcano
Forensic Systems Architect
