Dear Ms. Stahlkopf, Mr. Grieco, the Cisco Board of Directors and Investor Relations Team,

To: The Office of the General Counsel, the CISO, and the Board of Directors of Cisco Systems, Inc.

NOTICE OF DISCOVERY & MATERIALITY:

This communication serves as formal notice of a material cybersecurity risk identified within Cisco Systems' networking infrastructure, security software (Secure Client/AnyConnect), and the Cisco Security Cloud architecture.

As of April 2026, the breakthrough in **Neutral-Atom Reconfigurable Qubit Arrays** (documented in the accompanying technical disclosure) has reduced the physical qubit requirements for breaking **RSA-2048** and **ECC-256** by a factor of **100x**. This discovery renders current encryption standards used across Cisco's product lines effectively obsolete and susceptible to near-term decryption.

CISC0-SPECIFIC EXPOSURE & THE "LATENCY TAX":

Our analysis, supported by the attached USPTO filing (**Application No. 19/640,945**), indicates that Cisco's current "Quantum-Safe" roadmap is insufficient to mitigate this risk because:

- **Legacy Hardware Vulnerability:** Fixed-function hardware roots-of-trust in millions of active **Catalyst** and **Nexus** devices lack the computational overhead capacity to implement NIST-standard PQC (e.g., ML-KEM) without catastrophic performance failure.

- **Backwards Secrecy Failure:** The "Harvest Now, Decrypt Later" (HNDL) threat to Cisco's VPN and Zero-Trust tunnels is now an immediate fiscal risk, as the qubit-reduction breakthrough moves the decryption window from decades to months.

MANDATORY SEC DISCLOSURE REQUIREMENTS:

Under **SEC Regulation S-K, Item 106**, and **Item 1.05 of Form 8-K**, Cisco is required to disclose cybersecurity risks that are "material" to a reasonable investor. The obsolescence of your core security value proposition—upon which billions in annual revenue depend—is a fundamental material event.

Failure to acknowledge this accelerated timeline in your upcoming 10-Q filings, or continuing to market these products as "Secure" without disclosing the qubit-reduction risk, may constitute a material omission under **SEC Rule 10b-5**.

REQUIRED ACTION:

Immediately evaluate the technical specifics of the **10,000-qubit reconfigurable architecture** attached.

Formally disclose this risk to shareholders via the SEC to ensure transparency regarding the long-term viability of Cisco's encryption infrastructure.

NOTICE OF SCIENTER:

This notice is being sent via a registered email service accepted by the courts. It creates a definitive legal record of Cisco's awareness of this risk. Any failure to disclose this information to the market will be cited as evidence of **willful non-disclosure (scienter)** in future shareholder derivative actions or regulatory investigations.

Sincerely,

Reinaldo J. Aguiar Marcano

Forensic Systems Architect
