Dear Ms. Sudol, Ms. Walsh, Mr. Paris, Mr. Stackhouse, Mr. Jimenez, Mr. Morris, Mr. Chapman, Ms. Lesser, Mr. Devarakonda, and Ms. Van Hoesen,

Re: International Defensive Publication "Be Water, Be Light" (ISBN: 978-1-97-148129-6); USPTO # 19/640,945, USPTO # 19/632,333, and USPTO # 19/559,873.

This letter serves as formal notice that a comprehensive portfolio of patent applications has been released as a defensive publication to establish definitive prior art in the fields of **asynchronous secure communication**, **organizational information**

leak-proofing, and **attributed corporate influence detection**. This technical record, titled *"Be Water, Be Light: Portfolio of Patent Applications Submitted to the USPTO"* (ISBN: 978-1-97-148129-6), documents a new architecture designed to overcome the fundamental security and data-integrity bottlenecks of modern Electronic Health Record (EHR) and financial systems.

1. Anchors for Technical Disclosure (Healthcare & PE Context)

The following patent applications, formally filed with the USPTO in early 2026, serve as technical anchors for this notice, providing solutions for the secure management of PHI and the transparent tracking of corporate control:

- **USPTO # 19/640,945: Asynchronous Secure Communication with Post-Hoc Key Derivation.** Discloses a method for secure communication that inverts the traditional cryptographic paradigm, asynchronously transmitting data components before the final key derivation to increase resilience against Man-in-the-Middle (MITM) attacks during PHI exchange.
- **USPTO # 19/559,873: Method and System for Information Leak-Proofing of Organizations.** Defines a data analysis engine that maps the "blast radius" of sensitive information and calculates a "potential damage score" for internal nodes to proactively mitigate insider threats in massive EHR databases.
- **USPTO # 19/559,958: Method and System for Detecting Data Transposition and Unauthorized Data Permutation.** Provides a "permutation signature" system to protect against subtle data manipulation where record sequence is maliciously altered to change overall medical or financial meaning.
- **USPTO # 19/632,333: System and Method for Attributed Control Aggregation and Influence Detection.** Discloses a resilient "Identity Fingerprint" and "Influence Smearing" algorithm designed to traverse corporate ownership graphs and attribute direct/indirect control, piercing the corporate veil in complex private equity structures.

2. Formal Notification to the European Patent Office (EPO)

On April 7, 2026, a formal notification was delivered to the **European Patent Office (EPO)**. I have requested that this 721-page specification be indexed as **Non-Patent Literature (NPL)** within **Technical Clusters G06F and H04L**. This ensures examiners cite this work as prior art for any future applications related to secure data-link protocols, ownership tracing algorithms, or organizational risk modeling.

3. Strategic National Security Status and U.S. Government License

Recognizing the foundational nature of these inventions for national infrastructure and data security, I have granted a **perpetual, worldwide, no-fee license** to the **United States Federal Government**. This grant was formally communicated to the **Honorable Heidi Shyu**, Under Secretary of Defense for Research and Engineering, designating this IP as a **strategic national asset**.

4. Implications for Product Roadmaps

This disclosure establishes an undeniable public record that removes "plausible deniability" for entities attempting to patent these security and forensic technologies for exclusive benefit. Major international legal representatives, including those at **Simpson Thacher**, **Fish & Richardson**, and **Jenner & Block**, are hereby notified to ensure this technical record is considered during current and future patent filing cycles.

I remain available to provide the full high-resolution digital version of record to your technical and legal reviewers upon request.

Respectfully,
Reinaldo J. Aguiar Marcano, Forensic Systems Architect
