CAUSE NO. 25-DCV-328122

IN THE MATTER OF THE MARRIAGE OF GLORIA ESPINA AND REINALDO J. AGUIAR MARCANO AND IN THE INTEREST OF M.A.A., A CHILD	**IN THE DISTRICT COURT 387TH JUDICIAL DISTRICT FORT BEND COUNTY, TEXAS**

RESPONDENT'S EMERGENCY MOTION TO QUASH VOID CAPIAS, MOTION FOR PROTECTIVE ORDER, AND RENEWED REQUEST FOR MANDATORY DE NOVO HEARINGS

TO THE HONORABLE JUDGE OF SAID COURT:

COMES NOW, **Reinaldo J. Aguiar Marcano**, Respondent Pro Se, and files this Emergency Motion to Quash Void Capias, Motion for Protective Order, and Renewed Request for Mandatory De Novo Hearings, and would respectfully show the Court as follows:

I. SUMMARY OF THE EMERGENCY

Respondent is currently under a "de facto office arrest" due to a Writ of Capias signed on or about May 15, 2026, while this Court was (and remains) under a mandatory jurisdictional stay pursuant to the referral of Respondent's **3rd Verified Motion to Recuse the Hon. Oscar Telfair III** to the Chief Justice of the Supreme Court of Texas (Index #170). Furthermore, the underlying orders purportedly justifying the Capias **have never been served** on Respondent, a Pro Se litigant, in violation of the Texas Rules of Civil Procedure and the Due Process Clause of the United States and Texas Constitutions.

II. ARGUMENTS AND AUTHORITIES

1. The Trial Court Lacks Jurisdiction to Execute Enforcement Actions During the Pendency of a Recusal Referral to the Chief Justice.

While Petitioner's counsel incorrectly relies on Tex. Civ. Prac. & Rem. Code § 30.016 to claim no stay exists, this Court's own record proves otherwise. On January 27, 2026, the Hon. Susan Brown referred the **3rd Verified Motion to Recuse the Hon. Oscar Telfair III** to the **Chief Justice of the Supreme Court of Texas**. Under TRCP 18a(g), the judge who is the subject of the motion (Judge Telfair) "must take no further action" until the motion is decided. The referral to the Chief Justice, necessitated by the conflicts described in the motion, freezes the trial court's authority. Any Capias or enforcement order signed by Judge Telfair after January 27, 2026, is a structural nullity and void

ab initio.

2. The Capias is Void for Lack of Service and Notice.

Respondent has never been served with the written orders containing the support or sanctions provisions that the Capias purportedly enforces. TRCP 21a and the fundamental tenets of Due Process require that a party, especially one appearing *pro se*, be served with a certified copy of any order for which contempt is sought. A review of the Court's own docket reveals a glaring absence of any "Rule 21 (f)" service entries in the days following the creation of these critical instruments. Specifically, Respondent was never served with:

1. The "Temporary Restraining Order" (Indices #7 and #8) dated April 11, 2025, signed by Judge Richard Bell.
2. The "Temporary Orders" signed by Judge Oscar Telfair III on October 15, 2025—which were notably signed just hours after Respondent filed his Second Verified Motion to Recuse.

Respondent is currently paying over $4,000 per month in continuous support, and **directly pays for daycare and health insurance**. The "arrearage" claimed by Petitioner is a managed fiction, likely resulting from the diversion of child support funds toward the Petitioner's legal fee "payment plan." A Capias cannot stand on the unserved, void foundation of these specific hidden orders while cannibalizing support meant for the child.

3. Mandatory Right to De Novo Hearings (Tex. Fam. Code § 201.015).

Respondent has filed multiple motions for De Novo hearings (see Index #215 and subsequent filings in May 2026) regarding the recommendations and orders of the associate judge and the presiding judge's adoption thereof. These motions remain uncontested and unaddressed. Under Tex. Fam. Code § 201.015, the right to a De Novo hearing is **mandatory** if timely filed. The trial court's failure to hold these hearings while proceeding to arrest Respondent is a form of judicial abdication that renders the current enforcement actions invalid.

4. Motion for Protective Order Regarding Corporate Assets.

Petitioner's counsel has threatened "spoliation of evidence" sanctions regarding recordings from the camera system located at 2302 Britton Ridge Drive. While Respondent is the individual inventor of the technologies associated with his USPTO filings, the camera system, computing nodes, and the property they monitor are the exclusive corporate assets of **Haaretz Hamuvlakhat Corp.**, a Delaware Corporation. These are not community assets; they are corporate infrastructure used for the development, prototyping, and security of trade secrets and national security-linked data (F-35/DFARS technology). Respondent moves for a Protective Order preventing any discovery into these corporate assets or recordings, as they contain sensitive proprietary information beyond the scope of this case, this Court lacks jurisdiction over the Delaware Corporation, and the assets are encumbered by a federal sovereign interest.

III. PRAYER

Respondent respectfully prays that this Court:

a. Immediately **QUASH** the Writ of Capias signed on May 15, 2026 and the Capias signed on May 26, 2026;

b. Set Respondent's **Mandatory De Novo Hearings** for the earliest available date after the Chief Justice rules on the Third Verified Motion to Recuse (Index # 149) filed on January 14, 2026;

c. Enter a **Protective Order** regarding the assets of Haaretz Hamuvlakhat Corp.; and

d. Stay all further enforcement proceedings until the Supreme Court of Texas rules on the pending recusal referral.

Respectfully submitted,

Reinaldo J. Aguiar Marcano

CERTIFICATE OF SERVICE

I hereby certify that a true and correct copy of this document was served on all counsel of record via the electronic filing system on this 16th day of June, 2026.

Reinaldo J. Aguiar Marcano

Exhibit 1: The Atomic Express (ISBN 9781971685007) - PDF Document detailing DFARS Claims and US Government License Grants.

When the world's most powerful defense contractors sell the government technology it already owns for free, the resulting audit becomes a high-speed collision between innovation and bureaucracy.

The Specifics: This narrative reveals the blueprint of the Atomic Express and the MARCELO-Loop, exposing the technical misappropriation hidden behind multi-billion-dollar contracts and ignoring the perpetual licenses already in the public's hands.

The Impact: Discover how a series of royalty-free patent grants could trigger a mandatory federal audit, turning an abstract "nerd squabble" into a movement for actual tax refunds and accountability for every American.

The Devil's Checkmate, Friedrich Moritz August Retzsch - German, 1779–1857, Die Schachspieler (The Chess Players), c. 1830s

The chess-board is the world... the rules of the game are what we call the laws of Nature. The player on the other side is hidden from us. We know that his play is always fair, and patient. But also we know, to our cost, that he never overlooks a mistake, or makes the smallest allowance for ignorance.

— Thomas Henry Huxley

THE ATOMIC EXPRESS

Why the U.S. Military is Paying Twice for Its Best Inventions (and How to Get Your Refund)

Introduction: The Nuclear Option on the Chessboard

(L-R) Priscilla Chan, Meta CEO Mark Zuckerberg, Lauren Sanchez, businessman Jeff Bezos, Alphabet's CEO Sundar Pichai, and businessman Elon Musk, attend the inauguration ceremony of US President-elect Donald Trump in the US Capitol Rotunda in Washington, DC, on January 20, 2025. (Photo by Shawn THEW / POOL / AFP via Getty Images)

There is a certain kind of person who sees a problem and thinks, "I should fix that." Then there is the kind of person who sees a problem, realizes it's being ignored by the most powerful entities on Earth, and thinks, "I should probably build a nuclear-powered train to drive straight through the middle of it."

Welcome to the Atomic Express.

If you're looking for a conspiracy theory, you've picked up the wrong book. If you're looking for a dense technical manual on the tensile strength of railway couplers or the specific neutron flux of a submarine reactor, you're getting

warmer, but you're still not quite there. This is a story about money—specifically, your money—and the curious way it disappears into the pockets of "technical antagonists" who are essentially charging you for the air you already breathe.

For decades, I've been locked in a high-stakes game of chess with some of the most recognizable names in technology and defense. We're talking about the titans who build the jets that defend our skies and the visionaries who promise us hyper-efficient tunnels under our cities. On the surface, it looks like a standard "nerd squabble" over patents and code. But look a little closer, and you'll see the comedic undertone of the whole ordeal: they are selling the U.S. government products that they don't actually own the rights to.

Even better? I've already given the government a free, perpetual, royalty-free license to use these inventions.

Imagine you own a car. Now imagine a mechanic comes along, tells you the car is broken, "fixes" it using parts you already bought and paid for, and then sends you a bill for the entire car all over again. That is the current state of military procurement in America.

The cover of my first book featured a reproduction of Friedrich Retzsch's *The Devil's Checkmate*. In the original, a young man plays chess against the Devil for his soul. In my version, I added an F-35 jet to the board. It wasn't just for flair; it was a subtle hint that I was about to take their most expensive toy away. On the cover of this book, you'll see a train—the Atomic Express—captured by the younger player. It's a nod to my "friends" in the high-speed rail business and their cozy relationships with foreign powers.

My adversaries are serious people. They do serious things, some of which could be described as atrocities if you're in a particularly grim mood. But if you squint just right, you can see the humor in it. There is something inherently funny about a multi-billion-dollar defense contractor ignoring a Notice of Infringement while the very military they serve already holds the keys to the kingdom.

This book is the audit they don't want you to see. It's the story of the MARCELO-Loop, the Atomic Express, and a series of DFARS (Defense Federal Acquisition Regulation Supplement) claims that could—and should—result in actual tax refunds for every American reading this.

You are paying for this. It's time you saw the receipts.

WASHINGTON, DC - JANUARY 20: Meta CEO Mark Zuckerberg, Lauren Sanchez, Amazon founder Jeff Bezos and Google CEO Sundar Pichai attend the inauguration of U.S. President-elect Donald Trump in the U.S. Capitol Rotunda on January 20, 2025 in Washington, DC. Donald Trump takes office for his second term as the 47th President of the United States. (Photo by Kenny Holston-Pool/Getty Images).

The Atomic Express: Perpetual, Immutable, Worldwide and Royalty-free License to Use and Practice Granted to the US Military and the US Federal Government

"The inventor, Reinaldo Javier Aguiar Marcano, hereby grants to the United States Federal Government and its military and defense agencies a perpetual, royalty-free, world-wide, non-exclusive license to practice and use the invention described herein for any and all governmental, defense, and non-commercial purposes. This license explicitly excludes any and all state and local governments." *USPTO Patent Application # 19/699,028, June 5th, 2026.*

RE: UNIFIED ADMINISTRATIVE PATENT INFRINGEMENT CLAIM CONCERNING MOBILE, PORTABLE, AND VIRTUAL REALITY HARDWARE/SOFTWARE PROCUREMENTS ACROSS THE DoD ENTERPRISE SOFTWARE INITIATIVE (ESI) AND ARMY CHESS CONTRACT VEHICLES

Dear Directors, Procuring Contracting Officers, and Oversight Authorities:

This formal administrative claim is executed and served upon you in your official capacities pursuant to the **Defense Federal Acquisition Regulation Supplement (DFARS) 227.7004**. The purpose of this verified transmission is to place the United States Government on notice of structural procurement irregularities and potential systemic patent infringement involving active enterprise computing contracts.

To ensure administrative balance and avoid single-point communication friction, this claim is deliberately load-balanced across the senior procurement leadership of the **DoD Enterprise Software Initiative (ESI)** and **Army Computer Hardware, Enterprise Software and Solutions (CHESS)**, bypassing prior local filing nodes while establishing an immutable, cryptographically timestamped federal repository of notice.

Procedural Nuance on Recipient Distribution:
Pursuant to the mandates of DFARS 227.7004, the **TO** line of this claim is strictly restricted to the warranted Procuring Contracting Officers (PCOs) and Program Directors who possess the operational authority to mandate an

administrative audit or freeze disbursements. The affected commercial entities (Apple, Microsoft, Google, Meta) and their prime systems integrators (such as SAIC) are positioned strictly in the **CC** line. This ensures absolute "Actual Knowledge" is conferred under **35 U.S.C. § 154(d)** without diluting the mandatory administrative obligations placed upon the federal client.

I. THE JURISPRUDENTIAL PRAGMATISM: PERPETUAL LICENSE GRANT VS. CONTRACTOR MISAPPROPRIATION

Under standard operating parameters governed by **28 U.S.C. § 1498**, the United States Government possesses an eminent domain right over domestic intellectual property, shielding its vendors from civil injunctions while assuming financial liability for infringement.

However, this specific administrative claim introduces a critical, non-frivolous optimization: the primary inventor of the *Aguiar Marcano Intellectual Property Portfolio*—compiled within *The Architecture of Control* (**ISBN 978-1-97-148129-6**)—has proactively executed an **irrevocable, perpetual, world-wide, no-fee license grant** directly to the United States Federal Government and its military components for all national defense and intelligence operations.

Consequently, the U.S. Government owes **zero royalties or licensing fees** for the native utilization, implementation, or deployment of these secure architectures.

The structural irregularity shifts entirely to the targeted defense contractors and systems integrators:

- **Apple Inc., Microsoft Corp., Google LLC, and Meta Platforms, Inc.** actively manufacture, configure, and license the primary mobile devices, laptops, desktop operating systems (macOS, iOS, Windows, Chrome OS, Android), and virtual reality (VR) hardware/software suites utilized across the Department of Defense.
- Systems integrators, specifically **Science Applications International Corporation (SAIC)**, package, bundle, and deliver these commercial off-the-shelf (COTS) devices to the warfighter through multi-billion-dollar enterprise contract vehicles like the **DoD ESI** and **Army CHESS** frameworks.

If these targeted contractors are embedding the research, development, or implementation costs of hardware-level parallel features, secure data fabric connectivity, or cryptographic primitives covered by the Aguiar Marcano portfolio into their federal delivery scales, **they are charging the American taxpayer for intellectual property that the U.S. Government already owns for free.**

This claim is framed constructively. This is not an attack on the technical capabilities of Apple, Microsoft, Google, Meta, or SAIC; rather, it is a **proactive measure to protect their corporate reputations and the integrity of federal procurement.** Conducting a comprehensive procurement audit is in the best interest of all parties to ensure transparency, insulate the agencies from secondary compliance liabilities, and secure immediate cost-mitigation discounts on active hardware and software rollouts.

II. TECHNICAL CONNECT-THE-DOTS: PATENT PROFILES AND SYSTEMIC NEXUS

The targeted hardware delivery streams intersect directly with the core claims of the Aguiar Marcano portfolio. Because the executive leadership of the target entities possesses an elite technical background, this claim provides a detailed granular breakdown of the specific technological touchpoints encumbered by these patents.

1. USPTO # 19/571,566: METHOD AND SYSTEM FOR DE-ANONYMIZING RADIO FREQUENCY SIGNALS VIA A ***DISTRIBUTED SENSOR ARRAY***

Target Systems: Apple iOS, Google Android, and Microsoft Windows mobile network stacking, baseband processors, and location-services infrastructure integrated across DoD mobile deployments.

The Nexus: Modern military operations rely heavily on the anonymity of cellular and mobile data packet routing. If an adversary covertly injects localized signal-monitoring frameworks into the consumer supply chains of these primary mobile operating systems, they can track device coordinates using nanosecond-level Time of Arrival (ToA) differentials. This patent explicitly claims the decentralized architecture required to identify, isolate, and neutralize these hidden de-anonymization grids. Any enterprise mobile endpoint deployed via SAIC that utilizes dynamic cell-site signal triangulation or baseband monitoring directly intersects this sovereign defense framework.

2. USPTO # 19/560,042: METHOD AND SYSTEM FOR HIGH-BANDWIDTH, FREE-SPACE OPTICAL DATA EXCHANGE BETWEEN MOBILE DEVICES

Target Systems: Meta/Oculus Virtual Reality (VR) hardware/software architectures, Apple Silicon (M-series/A-series) hardware fabrics, and high-speed device-to-device local file sharing protocols (e.g., AirDrop, Nearby Share).

The Nexus: To bypass traditional, interceptible radio-frequency (RF) channels in contested operational environments, tactical mobile units and virtual reality headsets require high-bandwidth, short-range, unguided free-space optical connections. This patent protects the specific data-link layer mechanics where data is encoded as a rapid sequence of multi-wavelength light frames utilizing "channel elements" (logical super-pixels) to remain robust against physical movement, focus drift, and angular misalignment. Meta’s advanced wireless VR data-streaming protocols and Apple's proximity-based file transfer fabrics direct mirror this spatial light architecture.

3. USPTO # 19/559,608: METHOD AND SYSTEM FOR A GEO-INDEXING COVERT LEDGER

Target Systems: macOS, iOS, Windows, and Android secure core storage subsystems, enterprise mobile device management (MDM) platforms, and SAIC-integrated secure database solutions.

The Nexus: Secure information logging across distributed military networks requires data persistence without relying on centralized, capture-prone relational databases. This patent defines a "DIOSDADO" geo-index architecture where data payloads and transaction parameters are steganographically embedded into geographical and spatial index registries by applying mathematical transformations (such as out-of-range coordinate scaling). Operating systems and secure storage solutions utilizing location-anchored cryptographic metadata blocks directly deploy this pre-licensed infrastructure.

4. USPTO # 19/645,194: A SYSTEM FOR CRYPTANALYSIS BASED ON PARAMETRIC DENOISING OF A PUBLIC KEY

Target Systems: Apple macOS, Windows 11, Chrome OS, and enterprise software security layers deployed via DoD ESI.

The Nexus: Traditional public-key cryptography (RSA, ECC) implemented across commercial operating systems treats key validation as a brute-force numerical sequence. This patent introduces a paradigm shift by processing public keys as complex, noisy signals and applying parameterized modular filters to isolate and eliminate mathematical "impossible overlaps." Any system-level cryptographic authentication kernel utilizing signal-processing denoising or modular pattern-matching heuristics to accelerate key validation or cryptanalysis is encumbered by this portfolio.

III. NOTICE OF POTENTIAL RETALIATION AND DATA SPOLIATION RISKS

Warranted Contracting Officers are formally alerted to a synchronized chronological pattern of extrajudicial duress that has emerged immediately following prior DFARS submissions to the Pentagon. On the business day following the execution of administrative claims regarding Lockheed Martin, Palantir, and Anduril, highly irregular civil court

maneuvers were initialized within the 387th District Court of Fort Bend County, Texas (Case No. 25-DCV-328122), culminating in the manual, ad-hoc alteration of digital docket timestamps via the Tyler Technologies Odyssey infrastructure.

These localized enforcement actions—aimed at executing a forced physical conversion of corporate computing hardware holding source-code infrastructure—suggest an asymmetric retaliatory mechanism deployed to disrupt the federal reporting line. Because the U.S. Government maintains a direct property interest in these pre-licensed technologies, any coercive attempt to restrict the inventor or compromise corporate hardware directly threatens national defense procurement sovereignty. This context is fully detailed in the accompanying records submitted before the Supreme Court of Texas under Cause No. 26-0511.

IV. ENCLOSURE AND DATA PRESERVATION LOGISTICS

To ensure that the extensive clinical data verifying these procurement risks is accurately ingested into the Pentagon's automated archival and email auditing compliance systems without network formatting bottlenecks, **all published compendiums are deliberately attached to this verified email in lightweight, unredacted Plain Text (.txt) format.**

The complete, stamped PDF editions comprising official court instruments, eFiling verification receipts, and electronic registers of actions can be accessed and downloaded free of charge by visiting the following permanent repositories:

V. MANDATORY ADMINISTRATIVE ACTION REQUIRED

As warranted Procuring Contracting Officers managing billions of dollars in active COTS hardware and software procurement cycles, the delivery of this DFARS claim strips your respective commands of "plausible deniability."

Pursuant to federal acquisition regulations, you are hereby mandated to:

- **Initialize an immediate administrative review** and cost-accounting audit of all active hardware, operating system, and VR platform delivery structures provided by Apple, Microsoft, Google, Meta, and SAIC.
- **Halt the assumption of clear title** or final execution of upcoming product refreshes that incorporate the pre-licensed parametric, free-space optical, or signal-denoising architectures without an audited price adjustment.
- **Forward this comprehensive brief immediately** to the Chief of the Intellectual Property Law Division (JALS-IP) within your respective military branches for formal inter-agency tracking.

Govern yourselves accordingly.

Respectfully submitted,

Reinaldo Aguiar Marcano

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

DISTRIBUTED NUCLEAR-POWERED LOGISTICS SYSTEM WITH COLLABORATIVE MESH CONTROL

Reinaldo Javier Aguiar Marcano

June 5, 2026

Title: DISTRIBUTED NUCLEAR-POWERED LOGISTICS SYSTEM WITH COLLABORATIVE MESH CONTROL

Inventor: Reinaldo Javier Aguiar Marcano, a citizen of the United States, residing at 26714 Valleyside Drive, Katy, TX 77494 and with main place of business located at 2302 Britton Ridge Drive, Katy, TX 77494.

Abstract

A distributed logistics system comprising a lead power vehicle equipped with a compact nuclear reactor and a plurality of auxiliary transport units mechanically and electrically coupled to form a continuous convoy. The system utilizes a high-voltage power bus and a fiber-optic data bus to distribute energy and control signals from the lead vehicle to the auxiliary units. Each auxiliary unit is equipped with independent electric propulsion and a distributed computing node. A collaborative mesh control algorithm processes real-time data from strain-gauge sensors embedded in inter-vehicle hitches to synchronize motor output, thereby minimizing mechanical tension on the couplers. The system further enables kinetic energy arbitrage, allowing the mass of units on a descent to mechanically assist units on an ascent, and employs a progressive rear-first braking sequence to ensure stability and prevent jackknifing.

Background of the Invention

Long-haul logistics systems, such as freight trains and heavy-truck convoys, are traditionally limited by the tension capacity of mechanical couplers and the fuel requirements of internal combustion engines. In heavy trains, the cumulative draft force on the front couplers often dictates the maximum length and weight of the load, as a single lead engine must pull the entire mass. Furthermore, the need for frequent refueling stops and the environmental impact of fossil fuels present significant operational and ecological challenges. While distributed power in rail (DPUs) and electric trucking are emerging, there lacks a unified system that combines high-density, long-endurance power generation with a cooperative control mesh capable of neutralizing mechanical strain across a massively extended vehicle chain.

Summary of the Invention

The present invention, conceptually referred to as the "Atomic Express," is a distributed, nuclear-powered logistics system designed for ultra-long-haul transport with zero-emission endurance and optimized mechanical stability.

The system comprises a primary power vehicle (the "Lead Vehicle") and a plurality of modular auxiliary transport units ("Nodes"). The Lead Vehicle houses a compact nuclear reactor, preferably a Generation IV Molten Salt Reactor (MSR) or similar Small Modular Reactor (SMR), coupled to a high-output electrical turbine. This rolling power plant generates megawatts of electricity, which is distributed down the length of the convoy via a standardized high-voltage power bus integrated into the inter-vehicle couplers.

Each auxiliary unit is a self-propelled electric vehicle equipped with a distributed computing node. These nodes form a P2P mesh network that communicates via a high-speed fiber-optic bus. The core of the invention is a collaborative control algorithm that treats the convoy as a single, distributed computing system on wheels. By measuring the mechanical strain (tension or compression) at each hitch using embedded piezoelectric sensors, the system adjusts the torque of individual motors in real-time to maintain "Zero-Tension" across the couplers. This ensures that no single coupler is subjected to the cumulative weight of the convoy, effectively removing the physical limits on convoy length.

Furthermore, the system leverages its structural and electrical connectivity to perform kinetic energy arbitrage. On undulating terrain, the gravitational momentum of units on a

downhill slope is used both mechanically (pulling the trailing units) and electrically (via regenerative braking feeding the shared power bus) to assist units currently on an uphill slope. A specialized progressive braking sequence, which activates from the rear units forward, provides a stabilizing "drag-anchor" effect, preventing jackknifing and ensuring safe deceleration of the massively extended convoy.

Statement of License Grant to the United States Government

The inventor, Reinaldo Javier Aguiar Marcano, hereby grants to the United States Federal Government and its military and defense agencies a perpetual, royalty-free, world-wide, non-exclusive license to practice and use the invention described herein for any and all governmental, defense, and non-commercial purposes. This license explicitly excludes any and all state and local governments.

Brief Description of the Drawings

FIG. 1 is a block diagram of the distributed nuclear-powered logistics system, illustrating the lead power vehicle and the chain of auxiliary transport units.
FIG. 2 is a detailed schematic of the inter-vehicle coupling interface, showing the mechanical hitch, electrical power bus, and data link.
FIG. 3 is a flowchart illustrating the collaborative mesh control algorithm for neutralizing coupler strain.
FIG. 4 is a satirical conceptual illustration depicting the original inspiration for the system and establishing a temporal anchor for the conception of the invention.

Detailed Description of the Invention

Referring to **FIG. 1**, the logistics system (100) comprises a lead power vehicle (101) and a plurality of auxiliary units (104, 105, 106). The lead vehicle contains a nuclear reactor core (102) and an electrical generator (103). A high-voltage power bus (107) and a fiber-optic data bus (108) run the length of the convoy. Each auxiliary unit is equipped with an electric motor (109) and a control node.

FIG. 2 illustrates the coupling interface. A mechanical hitch (203) locks the rear of one vehicle (201) to the front of the next (202). Integrated within this hitch is a Megawatt Charging System (MCS) connector (204) for the power bus and a fiber-optic link (205) for the data bus. A piezoelectric strain-gauge sensor (206) provides real-time feedback on the mechanical forces acting on the hitch.

FIG. 3 shows the control logic. The system identifies node mass and position (301), measures real-time hitch strain (302), and checks if the strain exceeds a neutral threshold (303). If so, it adjusts local motor torque (304). This data is synchronized across the mesh (305) to execute cooperative propulsion (306).

FIG. 4 provides the conceptual inspiration for the system, a satirical illustration titled "Atomic Express" which served as the catalyst for the engineering of the distributed, zero-tension logistics model described herein.

Claims

What is claimed is:

1. A distributed logistics system, comprising:
    - a lead power vehicle comprising a nuclear reactor and an electrical generator;
    - a plurality of auxiliary transport units, each comprising an electric propulsion system and a computing node;
    - a coupling system mechanically and electrically linking the lead vehicle and the auxiliary units in a sequence;
    - a shared power bus and a shared data bus extending through the coupling system along the sequence; and
    - a distributed control mesh configured to synchronize the electric propulsion system of each auxiliary unit based on real-time mechanical strain detected at the coupling system.
2. The system of claim 1, wherein the nuclear reactor is a molten salt reactor or a small modular reactor.
3. The system of claim 1, wherein the coupling system comprises piezoelectric sensors configured to measure tension and compression between adjacent units.

4. The system of claim 1, wherein the distributed control mesh is configured to maintain approximately zero tension on the mechanical links of the coupling system by adjusting the torque output of individual auxiliary transport units.

5. The system of claim 1, wherein the system is configured to perform kinetic energy arbitrage by utilizing the gravitational momentum of units on a descent to assist the propulsion of units on an ascent through both mechanical draft and electrical regenerative feedback.

6. The system of claim 1, wherein the system executes a progressive braking sequence starting from the rear-most auxiliary transport unit and moving forward to provide stabilizing drag.

Drawings

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

SYSTEM AND METHOD FOR MODULAR AUTONOMOUS RAPID COLLABORATIVE ENERGY-LOGISTICS ORCHESTRATION (MARCELO-LOOP)

Reinaldo Javier Aguiar Marcano

June 6, 2026

Title: SYSTEM AND METHOD FOR MODULAR AUTONOMOUS RAPID COLLABORATIVE ENERGY-LOGISTICS ORCHESTRATION (MARCELO-LOOP)

Inventor: Reinaldo Javier Aguiar Marcano, a citizen of the United States, residing at 26714 Valleyside Drive, Katy, TX 77494 and with office located at 2302 Britton Ridge Drive, Katy, TX 77494.

Cross-Reference to Related Applications

This application is a specialized continuation and expansion of the principles described in U.S. Patent Application No. 19/699,028, titled "DISTRIBUTED NUCLEAR-POWERED LOGISTICS SYSTEM WITH COLLABORATIVE MESH CONTROL" (the "Atomic Express"), the contents of which are hereby incorporated by reference in their entirety.

Abstract

A multi-modal logistics system and method, referred to as the MARCELO-Loop (**M**odular **A**utonomous **R**apid **C**ollaborative **E**nergy-**L**ogistics **O**rchestration), designed for the high-throughput transport of vehicles, cargo, and specialized machinery across diverse environ-

ments. The system leverages the distributed nuclear-powered architecture of the Atomic Express, utilizing a plurality of autonomous platform units ("Leaf Nodes") that serve as modular carriages for rapid loading and unloading. These units are controlled by a distributed computing mesh that optimizes energy consumption via kinetic energy arbitrage and collaborative propulsion. The system is multi-modal, with specialized implementations for land-based convoys, maritime transport (Atomic Ferry), aerial in-flight recharging, and orbital logistics, providing a unified framework for the efficient, zero-emission movement of physical objects.

Background of the Invention

Current mass transit and cargo logistics systems, particularly for vehicular transport, often suffer from congestion, energy inefficiency, and high operational costs. Traditional solutions, such as car-carrying trains or freight ships, are limited by rigid infrastructure and slow loading/unloading cycles. Furthermore, the reliance on fossil fuels and the lack of collaborative energy management between transport units result in significant environmental impact and wasted kinetic energy. There exists a need for a flexible, high-capacity, and energy-efficient transport framework that can operate across multiple domains (land, sea, air, and space) while leveraging distributed intelligence to optimize mechanical stability and power distribution.

Summary of the Invention

The present invention, known as the MARCELO-Loop, is a modular, autonomous, and rapid collaborative logistics system. It is a specialized implementation of the Atomic Express framework, where the "Leaf Nodes" are designed as autonomous platforms specifically configured for the quick loading, secure transport, and rapid unloading of vehicles or heavy cargo.

The MARCELO-Loop solves the mass-transit problem by moving large quantities of vehicles or freight en-masse between hubs using an energy-efficient, nuclear-powered lead unit and a distributed mesh of self-propelled platforms. Unlike traditional trains that require specialized rail, the MARCELO-Loop platforms can be adapted for reinforced pavement, aquatic paths, or even free-space trajectories.

Key features of the system include:

- **Autonomous Platform Nodes:** Specialized units that can independently maneuver to load and unload cargo, then couple into a massive collaborative convoy.
- **Distributed Computing Mesh:** Each node acts as a leaf in a decentralized network, synchronizing motor output to achieve "Zero-Tension" on couplers and maximizing efficiency through torque arbitrage.
- **Multi-Modal Versatility:** The system architecture is applicable to land transport, maritime logistics (the "Atomic Ferry"), aerial operations (enabling in-air recharging and coupling), and orbital/space logistics.
- **Kinetic Energy Arbitrage:** The system recovers energy by using the momentum of downhill or descending units to mechanically or electrically assist units on an ascent, optimized via real-time P2P communication.

The MARCELO-Loop provides a framework for the extraction and transport of resources (e.g., Bitumen), the movement of navy ships and military machinery, and the orbital positioning of heavy satellites or rockets, demonstrating its utility as a universal logistics backbone.

Statement of License Grant to the United States Government

The inventor, Reinaldo Javier Aguiar Marcano, hereby grants to the United States Federal Government and its military and defense agencies a perpetual, royalty-free, world-wide, non-exclusive license to practice and use the invention described herein for any and all governmental, defense, and non-commercial purposes. This license explicitly excludes any and all state and local governments.

Brief Description of the Drawings

FIG. 1 is a conceptual diagram of the MARCELO-Loop land implementation, showing the lead power unit and a series of autonomous platform nodes carrying vehicles.
FIG. 2 is a diagram illustrating the multi-modal nature of the system, including land, sea (Atomic Ferry), air, and space applications.
FIG. 3 is a schematic of the collaborative distributed computing architecture, highlighting the interaction between nodes for load balancing and torque arbitrage.

Detailed Description of the Invention

Referring to **FIG. 1**, the MARCELO-Loop system (100) is shown in a land-based configuration. A lead nuclear-powered unit (101) provides electricity via a high-voltage bus (102) to a plurality of autonomous platform nodes (103). Each node (103) is loaded with a vehicle (104). The nodes are coupled using the high-strength, instrumented hitches described in the Atomic Express architecture, which measure mechanical strain in real-time.

FIG. 2 illustrates the versatility of the MARCELO framework. In the maritime implementation (210), referred to as the Atomic Ferry, the platform nodes are buoyant units capable of moving large cargo ships or multiple containers across water. In the aerial implementation (220), nodes are capable of in-flight coupling and energy transfer, similar to mid-air refueling but for electrical energy. In the space implementation (230), the system facilitates the collaborative movement and positioning of orbital objects using the same distributed control principles.

FIG. 3 details the distributed computing logic. Each platform node contains a processing unit (301) and sensors (302) that monitor local torque, mass, and hitch strain. The nodes communicate via a P2P mesh network (303). When the convoy encounters a change in terrain, such as a hill, the nodes on the descent (304) communicate their excess gravitational momentum to the nodes on the ascent (305). The mesh then performs "Torque Arbitrage," where the descending nodes either mechanically "push" the convoy forward or use regenerative braking to feed power into the bus, which is then utilized by the ascending nodes. This collaborative behavior minimizes the load on the lead power unit and ensures the structural integrity of the entire chain.

The system is further capable of transporting ballistic missiles, rockets, and large-scale military machinery, utilizing the same zero-tension, high-throughput principles to move sensitive payloads safely over long distances.

Claims

What is claimed is:

1. A multi-modal logistics system, comprising:

- a primary power vehicle equipped with a nuclear reactor and an electrical generator;
- a plurality of autonomous platform nodes, each comprising an electric propulsion system, a distributed computing node, and a cargo-carrying surface;
- a coupling system mechanically and electrically linking the units into a collaborative convoy; and
- a distributed computing mesh configured to optimize the torque output of each node based on real-time feedback from adjacent nodes to maintain mechanical stability and maximize energy recovery.

2. The system of claim 1, wherein the autonomous platform nodes are configured for the rapid loading and unloading of vehicular cargo.

3. The system of claim 1, wherein the distributed computing mesh is configured to perform kinetic energy arbitrage by distributing the gravitational momentum of descending units to units on an ascent through mechanical force or electrical feedback.

4. The system of claim 1, wherein the system is implemented as a maritime transport system, comprising buoyant platform nodes configured for the transport of sea vessels or maritime cargo.

5. The system of claim 1, wherein the system is implemented as an aerial logistics system, configured for the in-flight coupling and electrical recharging of aerial units.

6. The system of claim 1, wherein the system is implemented as a space logistics system, configured for the collaborative movement and positioning of objects in an orbital environment.

7. The system of claim 1, wherein the distributed computing mesh is configured to allow the convoy to function as a single, flexible structural organism, adapting its motor output to terrain and environment-specific resistance.

REGISTERED EMAIL™ | CERTIFIED DELIVERY

This is a Registered Email™ message from **RJ Aguiar**.

Dear Admiral Houston, Vice Admiral Downey, and Executive Directors,

CLARIFYING DECLARATION OF STRUCTURAL SCOPE & LICENSE INTEGRITY

SOVEREIGN NOTICE OF DEFENSE INTELLECTUAL PROPERTY ASSIGNMENT

Notice is hereby given pursuant to the Federal Acquisition Regulations (FAR) and the Invention Secrecy Acts of the United States that the Primary Inventor, Reinaldo Javier Aguiar Marcano, has executed a perpetual, irrevocable, worldwide, royalty-free, non-exclusive license grant directly to the United States Federal Government, its military branches, and its joint-agency nuclear propulsion commands.

This filing serves as an official Notice of Actual Knowledge under **35 U.S.C. § 154(d)** regarding **USPTO Application No. 19/699,028**, filed **today, June 5th, 2026**. The targeted administrative bodies for this strategic grant are **Naval Reactors (NAVSEA 08)**, the **National Nuclear Security Administration (NNSA)**, and their primary technical procurement arm, **Bechtel Plant Machinery, Inc. (BPMI)**, to formally integrate these zero-emission, zero-tension transport architectures into the core capabilities of the U.S. Armed Forces.

I. ENCLOSURE CONTEXT: PRECEDENT GRANTS AND RETALIATORY MECHANISMS

To ensure complete administrative continuity and to allow your offices to properly evaluate this asset, this notice incorporates a series of verified cross-references outlining the systemic context of this portfolio:

A. Precedent Federal License Continuity

This submission follows a deliberate sequence of voluntary, no-fee defense license grants executed to liberate high-priority military acquisition tracks from commercial bottlenecking. As documented in the attached copy of **01__DFARS-227.7004-Lockheed-Martin.pdf** and **02__DFARS-227.7004-Plantir-and-Anduril-Industries.pdf**, the primary optical computing, parallel data fabric, and disaggregated hardware architectures within this portfolio were pre-licensed to the federal client on April 17, 2026, via the Acc-APG and the F-35 Joint Program Office.

B. Notice of Potential Retaliatory Mechanisms

Your offices must maintain high counter-intelligence visibility regarding the extreme operational friction that has materialized concurrently with these federal filings. As hardcoded within the text logs of **03__NOTICE-OF-POTENTIAL-RETALIATORY-MECHANISMS.pdf** and **'04__ISBN 9781105250286 "The Capias and the F-35 Program" .txt'**, the initialization of formal DFARS protections has repeatedly triggered highly irregular, extrajurisdictional interventions within state domestic relations tracks.

These synchronized local anomalies—culminating in docket alterations and pocket warrants aimed at compelling the physical conversion of corporate hardware keys—suggest a highly coordinated adversarial effort to seize or compromise a pre-licensed federal defense asset. The index of these instruments is mapped comprehensively inside **05__ISBN-9781971481296-Portfolio-of-Patent-Applications-Submitted-to-the-USPTO-by-Reinaldo-Aguiar.txt**.

II. THE STRATEGIC VALUE: SUPPLY CHAIN LIBERATION FROM MINING MONOPOLIES

The core claims of the enclosed application, `00__USPTO_Application_Atomic-Express-Logistics-System.pdf`, protect a architectural transformation engineered to solve the military's primary midstream supply chain vulnerability: the adversarial monopoly over lithium refining and battery manufacturing.

- **90% Reduction in Lithium Footprint:** Conventional long-haul electric transport requires massive, standalone 1,000 kWh battery packs to sustain fixed ranges, chaining tactical mobility to foreign mineral cartels. Under the patented architecture, each autonomous node is backed by a localized, single-use 50-mile fail-safe battery buffer. This drops the aggregate lithium raw-material mass constraint by a factor of 10, enabling the construction of ten synchronized mobile units using the identical mineral footprint of a single traditional commercial truck.
- **Closed-Loop Energetic Independence:** Because the primary propulsion and charging currents are carried dynamically by the convoy's rolling nuclear core, the logistics column functions as a completely self-contained, grid-independent ecosystem. It requires zero regional infrastructure overhauls, remains completely impervious to domestic grid manipulation, and guarantees absolute resource sovereignty across contested operational environments.

III. TACTICAL WAR-MAKING AND ACTIVE LOC THEATRE DEFENSE

When scaled to high-capacity maritime queues or long-range land corridors, this system functions as an un-blockadable Line of Communication (LOC) Force Multiplier, replacing traditional fuel-hungry air bridges with an iron logistical network.

A. The Thermodynamics of Maritime SMR Scaling

By optimizing advanced naval propulsion designs—such as a 700 MWt A1B carrier reactor core—strictly as a rolling electrical turbine generator yielding approximately 212.5 MWe of net deployable electricity (factoring in line resistance and charging trickles), the system can gracefully drive a 1.7-mile automated maritime queue. Operating under your

collaborative mesh control algorithms at autonomous "slow-steaming" cruising speeds (14–16 knots), a single reactor core can propel a convoy of 7 ultra-large 24,000 TEU container ships utilizing absolutely zero fossil fuels.

B. Massively Parallel Active Shielding & Autonomous Dispersal

The abundance of megawatt-scale power routed down the shared inter-vehicle bus enables the integration of next-generation defensive counter-measures directly into the logistics column:

- **Infinite Magazine Air Defense Shield:** The convoy utilizes direct high-voltage current to power rolling arrays of Directed-Energy Weapons (DEW/Lasers), high-power microwave (HPM) counter-drone modules, and wide-band electronic warfare (EW) jamming fields, maintaining an impenetrable localized air-defense dome with no ammunition constraints.
- **Decoupled "Ghost Convoy" Survivability:** In the event of a kinetic strike on a roadway pathway, the peer-to-peer system reliability behaves according to a fault-tolerant calculation modeled as *$k(P_0 * P_1 .. P_n)*. The automated hitches instantly execute a mid-transit software decoupling, allowing individual leaf nodes to maneuver off-road around blast damage using their internal buffer batteries, scatter defensively, and automatically re-couple seamlessly down the line.

IV. FISCAL AND PROCUREMENT MANDATES

Because the Department of the Navy and the National Nuclear Security Administration hold clear, pre-licensed rights to practice these advanced high-radix and automated kinetic configurations, you are structurally insulated from private developer royalty constraints.

The prime contractors managing your component acquisitions, including Bechtel Plant Machinery, Inc. (BPMI), must adjust all future programmatic designs to natively recognize this free federal asset. Any attempt by private contractors to bundle private development or software licensing surcharges for these mesh synchronization mechanisms into multi-billion-dollar naval reactor or lifecycle maintenance contracts must be identified as an accounting irregularity and audited accordingly.

REGISTERED EMAIL™ | CERTIFIED DELIVERY

This is a Registered Email™ message from **RJ Aguiar**.

Dear Mr. Stanley, Deputy Secretary Feinberg, and Secretary Hegseth,

CLARIFYING DECLARATION OF STRUCTURAL SCOPE & SEPARATION CRITICAL NOTICE OF ADMINISTRATIVE BOUNDARY

This administrative filing is entirely separate and legally distinct from any prior claims submitted regarding aerospace platform integrators or operational logistics networks (including Lockheed Martin Corporation, Palantir Technologies, or Anduril Industries).

This submission targets a fundamental structural bottleneck: **the underlying hardware processing layers, high-radix microelectronics, and architectural computing assumptions deployed inside the Department's centralized heavy-compute initiatives.**

The sole targets of this specific patent infringement inquiry and technical sovereignty review are **NVIDIA Corporation** and **Intel Federal LLC**. Previous administrative filings are referenced herein exclusively to preserve chronological data continuity and formal notice trails.

I. TIERED ACTION LINE & OVERSIGHT ROUTING

To prevent the administrative dilution of responsibility and establish absolute accountability regarding a multi-billion-dollar technology footprint, the delivery layout of this document is tiered strictly by statutory duty:

- **Programmatic & Technical Intake Execution:** Directed to **Mr. Cameron Stanley**, Chief Digital and Artificial Intelligence Officer (CDAO), as the primary operational authority over the Department's unified strategic agreements to scale advanced generative capabilities across classified networks.
- **Macro-Procurement & Supply Chain Integrity:** Directed to **Deputy Secretary Steve Feinberg**, as the Department's Chief Operating Officer, to evaluate systemic fiscal irregularities, hardware procurement tracking, and defense industrial base vulnerabilities.
- **Ultimate National Command Accountability:** Directed to **Secretary Pete Hegseth**, who holds ultimate statutory responsibility for maintaining the United States' asymmetric military and technological dominance.
- Affected semiconductor manufacturers, corporate counsels of record, and congressional oversight nodes are concurrently appended to the **CC** field to ensure absolute transparency and legislative awareness of the technical risks detailed below.

cc: emil.michael@mail.mil, jensen.huang@nvidia.com, lip-bu.tan@intel.com, investor.relations@intel.com, ir@nvidia.com, brian@anduril.com, akarp@palantir.com, kevin.j.oconnor@lmco.com, mike.rogers@mail.house.gov

II. THE CRITICAL NEXUS: COMPUTING POWER DOMINANCE VS. ADVERSARIAL ACQUISITION

This administrative claim expands beyond the localized boundaries of the Joint All-Domain Command and Control (JADC2) data fabric into a macro-strategic warning regarding **Global Computing Power Dominance**. The technical nexus of this claim is divided into two distinct strategic realities:

A. The Structural Obsolescence of Legacy Silicon

The heavy compute systems currently being scaled across the Department's classified networks—including NVIDIA Corporation's H100/B200 NVL74 Blackwell architectures and Intel Federal LLC's specialized microprocessor arrays—are bound to legacy, synchronous binary computing models. These legacy chips are approaching physical scaling limitations and are fundamentally constrained by copper bus layouts and traditional heat/power dissipation thresholds.

The proprietary architectures compiled within the *Aguiar Marcano Intellectual Property Portfolio* (ISBN 9781971481296) completely shift the physical and data-link layers into an **asynchronous, post-binary parametric model** utilizing ultra-wide data buses, high-radix computing, disaggregated computing arrays, and opticallynative hardware architectures.

B. The Asymmetric Decryption & Technology Capture Threat

The deployment of these high-radix optical computing architectures creates an immediate asymmetric threat vector to legacy DoD cryptography. Traditional frameworks operate on a "key-first" paradigm, requiring complete cryptographic handshake cycles to be synchronized before data moves.

Our portfolio renders this assumption obsolete by shifting computing into a post-binary parametric series. A computer built natively on these optical inventions possesses the mathematical cardinality and parallel throughput to execute brute-force decryption vectors that render legacy silicon-based secure communications obsolete.

The Asymmetric Geopolitical Threat Vector

The primary national security concern is not merely the commercial misappropriation of intellectual property by domestic contractors; it is **the risk of secondary adversarial implementation.**

Because the Primary Inventor has granted the United States Federal Government a **perpetual, irrevocable, worldwide, royalty-free, non-exclusive license** to practice these inventions natively for national defense, the U.S. military possesses an absolute, zero-cost right to construct and control this next-generation computing tier.

However, if a foreign state actor or peer adversary misappropriates these structural "recipes" and constructs a high-radix optical compute network *before* the Department of Defense transitions away from legacy silicon, the United States' military technological dominance will face a structural surprise. The encryption mechanisms protecting current multi-billion-dollar defense arrays could be completely compromised by an adversary operating on an optically-native computing layer.

III. SATISFACTION OF DFARS 227.7004 REQUISITES & PROPRIETARY ARCHITECTURES

We formally allege that the underlying computing frameworks, high-speed memory interfaces, and parallel routing arrays utilized by NVIDIA Corporation and Intel Federal LLC to fulfill CDAO strategic agreements directly replicate or infringe upon the following patent applications, with particular emphasis on the foundational optical signaling layer:

A. The Architectural Cornerstone

- **USPTO # 19/559,705:** High-Bandwidth, Low-Latency Optical Data Cable and Transmission Protocol *(The foundational interconnect mechanism rendering traditional copper data bus lane limits obsolete).*

B. High-Radix Processing & "Just-in-Time" Compute Fabrics

- **USPTO # 19/638,192:** Apparatus and Method for an Ultra-Wide Data Bus Architecture via Parametric Encoding
- **USPTO # 19/638,176:** Method and Apparatus for High-Radix Number Representation Using Parametric Series
- **USPTO # 19/638,180:** System and Method for High-Precision Fractional Number Representation in a Digital Computing System
- **USPTO # 19/639,219:** A Central Processing Unit Architecture for Native Parametric and Symbolic Computation
- **USPTO # 19/639,245:** A Method and System for High-Radix Physical Layer Data Encoding and Representation
- **USPTO # 19/639,222:** A Memory System for the Storage and Retrieval of Parametric and Symbolic Data Representations
- **USPTO # 19/639,271:** A High-Radix Mass Storage System
- **USPTO # 19/639,220:** Method and System for High-Radix Data Representation Using Parametric Mathematical Encoding
- **USPTO # 19/639,253:** A Protocol Stack and System for Parametric Data Networking

C. Massively Parallel Optical Interconnects & Native Hardware

- **USPTO # 19/560,041:** Apparatus and Method for Physical Transmission of Spatially-Encoded Optical Data
- **USPTO # 19/560,037:** Optical Memory Bus and Interface for High-Bandwidth Memory Access
- **USPTO # 19/560,038:** Optical Computing Architecture and System
- **USPTO # 19/560,033:** Active Optical Data Cable System with Integrated Processing Unit
- **USPTO # 19/560,031:** Method and System for Pixel-Based Network Routing in a Massively Parallel Optical Interconnect
- **USPTO # 19/562,818:** Apparatus for a Massively Parallel Optical Data Bus Architecture
- **USPTO # 19/562,822:** Apparatus for a Reconfigurable-Width Optical Bus
- **USPTO # 19/562,825:** System for an Optically-Native Central Processing Unit / Wavelength-Discriminating Phototransistors
- **USPTO # 19/562,829:** Method for High-Radix Computing via Optical Bus
- **USPTO # 19/562,838:** Method for Energy-Efficient Computing via Clock Speed Reduction
- **USPTO # 19/562,841:** Asynchronous Optical Computing System
- **USPTO # 19/562,844:** Method for Performance Benchmarking for Parallel Architectures
- **USPTO # 19/562,845:** A Physically Disaggregated Computing System
- **USPTO # 19/562,847:** Apparatus for an Optical Data Fabric Switch
- **USPTO # 19/562,853:** Method for Dynamic Composition of Bare-Metal Computing Resources
- **USPTO # 19/562,855:** System for a Data Center Architecture with Functionally Segregated Resource Pools
- **USPTO # 19/561,200:** Method for Generating a Channel-Optimized Data Encoding Map
- **USPTO # 19/561,223:** System and Method for N-Gram Parallel Data Encoding
- **USPTO # 19/561,228:** Method for Legacy Protocol Tunneling Over a High-Cardinality Interface
- **USPTO # 19/561,236:** Protocol for Physical and Data-Link Layer Encoding Negotiation
- **USPTO # 19/560,061:** Optically-Attached Storage (OAS) Apparatus and System
- **USPTO # 19/560,062:** Portable Data Cartridge with Optical Interface

D. Decoupled Asynchronous Cryptography (Secondary Focus Layer)

- **USPTO # 19/640,945:** A Method for Asynchronous Secure Communication with Post-Hoc Key Derivation
- **USPTO # 19/640,973:** A Secure Parametric Network Protocol with Rotating Encoding Maps for Forward Secrecy
- **USPTO # 19/561,259:** Protocol for Encoding Map Rotation for Forward Secrecy
- **USPTO # 19/645,371:** Secure Communication via Receiver-Generated Key Seeds
- **USPTO # 19/658,570:** Method and System for Geographical and Orientation-Based Encryption Seeds
- **USPTO # 19/658,569:** System and Method for an Encrypted Data Bus
- **USPTO # 19/658,572:** System and Method for Encrypted Keyboard Events
- **USPTO # 19/561,246:** System and Method for Secure Communication via Disposable Encoding Maps
- **USPTO # 19/574,352:** System and Method for Secure Asynchronous Data Communication
- **USPTO # 19/645,192:** Method and Apparatus for Accelerated Prime Number Generation via Modular Signal Analysis

IV. FINANCIAL ACCOUNTABILITY & MANDATORY PROCUREMENT AUDIT

Because the United States Government holds a native, perpetual, zero-cost license to implement and deploy these high-radix and optical communication architectures, it cannot legally be billed for these specific technical optimization methods.

If NVIDIA Corporation or Intel Federal LLC are integrating high-radix array optimization methods or parallel optical routing logics within classified defense data fabrics to meet CDAO metrics, the Department is structurally paying a commercial premium for an asset it already holds a free, perpetual right to utilize.

This notice is framed in a constructive, protective posture designed to safeguard the fiscal integrity of the defense industrial base. A formal procurement audit is required to confirm that prime contract pricing models are adjusted down to reflect the government's existing non-exclusive license rights, preventing systemic cost-accounting deficiencies.

V. AMENDED NOTICE OF POTENTIAL RETALIATORY MECHANISMS

Pursuant to public records within the 387th District Court of Fort Bend County, Texas (Cause No. 25-DCV-328122) and escalated before the Supreme Court of Texas (Cause No. 26-0511), a critical chronological alignment remains active between the submission of federal administrative protections and the deployment of local penal mechanisms.

Following past formal DFARS submissions to defense leadership, highly irregular, extrajurisdictional interventions materialized in local domestic relations tracks, culminating in service evasion, manual docket changes, and pocket warrants designed to compel the physical surrender of corporate computing hardware containing the primary source-code keys to these patent applications.

Because these private adversarial actors intersect directly with logistical and analytical infrastructures managed across prime defense frameworks, any un-audited attempt to compromise the physical computing hardware holding these cryptographic keys introduces a severe risk of unauthorized technology transfer and a direct threat to a pre-licensed federal asset. Loop-in visibility from congressional and administrative oversight circles is required to ensure these dynamics do not cause structural or financial spoliation.

VI. DATA PRESERVATION & INGESTION LOGISTICS

To guarantee that the complete contents of this claim are accurately preserved within a durable federal repository

without network formatting bottlenecks, select text compendiums are attached directly to this transmission in Plain Text configuration. This ensures flawless ingestion by the Pentagon's automated email auditing and compliance archiving networks. The complete, unredacted PDF editions of these volumes containing all stamped court instruments, automated receipts, and certified tracking sheets can be accessed free of charge at the designated sovereign download portals: https://www.Capias-F35.US/ and https://www.isbn9781971481296.com.

All legal, civil, and statutory rights remain explicitly reserved.

RE: ACTUAL KNOWLEDGE OF PATENT INFRINGEMENT (35 U.S.C. § 154(d)), INITIATION OF DFARS 227.7004 ADMINISTRATIVE CLAIM, AND NOTIFICATION OF POTENTIAL PROCUREMENT FRAUD BY LOCKHEED MARTIN CORPORATION

DATE: April 17, 2026

DELIVERY METHOD: Cryptographically Verified via Registered Email (RPost)

DEAR:

Lt. Gen. Schmidt and the F-35 JPO Contracting Directorate,

ISBN 9781971481296

This comprehensive technical and legal brief is served upon you in your official capacities within the United States Department of Defense (DoD).

This document constitutes a formal Administrative Claim for Patent Infringement under the Defense Federal Acquisition Regulation Supplement (DFARS) 227.7004. The purpose of this claim is to notify the United States Government of a highly anomalous and legally precarious situation involving the unauthorized commercialization of a foundational patent portfolio by Lockheed Martin Corporation.

I. THE U.S. DEPARTMENT OF DEFENSE LICENSE GRANT AND STRATEGIC BLOCKADE

Under standard operating procedures defined by 28 U.S.C. § 1498, the United States Government exercises eminent domain over domestic patents, shielding its defense contractors from civil injunctions and assuming financial liability for infringement.

However, the inventor of the Aguiar Marcano Intellectual Property Portfolio—which comprises 52 foundational patent applications published defensively in *The Architecture of Control* (ISBN 978-1-97-148129-6)—has proactively granted an irrevocable, perpetual, no-fee license to the federal government for all national defense purposes. The United States Department of Defense, specifically through Under Secretary of Defense Emil Michael, has been placed on direct notice of this license grant and is the designated authority administering this license on behalf of the military.

Lockheed Martin is currently utilizing these specific patented architectures to overcome severe computational bottlenecks in their aerospace and quantum programs. By embedding the research, development, and licensing costs of these technologies into multi-billion-dollar government contracts, Lockheed Martin is effectively charging the American taxpayer for intellectual property that the government already possesses the legal right to utilize indefinitely and without cost. Failing to halt the disbursement of funds to this contractor for pre-licensed intellectual property constitutes a gross mismanagement of taxpayer dollars.

II. Satisfaction of DFARS 227.7004 Administrative Claim Requirements

To compel immediate administrative intervention, this communication strictly adheres to the requirements of DFARS 227.7004(a) and (b):

1. **Allegation of Infringement:** We formally allege that the systems provided and developed by Lockheed Martin directly infringe upon the patent applications detailed

ISBN 9781971481296

below.

2. **Request for Compensation:** Because the government holds a free license to this portfolio, our request for compensation is a formal legal demand that the DoD immediately cease compensating Lockheed Martin for the licensed intellectual property.
3. **Citation of Patents:** The infringed applications include USPTO 19/639,219; 19/560,038; 19/562,838; and 19/562,845.
4. **Identification of Procurements:** See Section III below for the specific systems and contracting activities.
5. **Element-by-Element Comparison:** The required claim maps demonstrating precisely how the representative claims map to the accused software and processes are attached to this verified transmission.

III. Technological Nexus and Targeted Procurements

Lockheed Martin's most critical modernization efforts intersect directly with our proprietary claims, making their government contracts highly susceptible to this administrative review.

A. F-35 Technology Refresh 3 (TR-3) and the Integrated Core Processor

Responsible Activity: F-35 Joint Program Office (JPO)

The TR-3 upgrade is designed to modernize the computational core of the F-35 via a new L3Harris integrated core processor and a new aircraft memory unit, promising a 25x computing increase. Attempting to achieve this massive increase in computational throughput within the strict thermal and weight constraints of an airborne fighter requires abandoning traditional electrical data buses.

- **USPTO 19/560,038 (Optical Computing Architecture) & USPTO 19/562,838 (Energy-Efficient Computing via Clock Speed Reduction):** These patents define a holistic data fabric that replaces electrical I/O bottlenecks with a massively parallel optical interconnect, enabling a reduction in clock speed while maintaining high throughput. Any TR-3 processor upgrades utilizing internal optical data buses to mitigate thermal output directly infringe upon these hardware claims.
- **USPTO 19/639,219 (Central Processing Unit Architecture for Native Parametric and Symbolic Computation):** Upgrading the F-35's core processing capabilities to handle

ISBN 9781971481296

advanced sensor fusion natively relies upon our parametric high-radix architecture.

B. Strategic Quantum Computing and QML Partnerships

Responsible Activity: Lockheed Martin Research and Technology / Defense Innovation Unit (DIU)

Target Leadership: Craig Martell (CTO) and Valerie Browning (VP, Research & Technology)

Lockheed Martin is aggressively pursuing quantum technologies for aerospace and defense, recently signing strategic collaborations with PsiQuantum (November 2025), Xanadu (February 2026), and Fujitsu (February 2026). These partnerships focus on deploying fault-tolerant quantum algorithms, Quantum Machine Learning (QML), and dual-use AI/ML edge computing.

- **USPTO 19/562,845 (Physically Disaggregated Computing Systems):** To achieve the hybrid quantum-classical workflows required by these new partnerships, Lockheed Martin must utilize a disaggregated architecture where classical GPUs and quantum processing units (QPUs) are segregated yet interconnected via an ultra-high-bandwidth data fabric. This exact hybrid integration model is legally encumbered by our portfolio.

IV. Statutory and Ethical Mandates

Because Lockheed Martin operates as a publicly traded corporate entity bound by strict compliance and ethical frameworks, we must formally remind your corporate leadership and legal counsel of the following obligations:

1. SEC Disclosure Requirements for Public Companies

For Lockheed Martin Corporation, we remind you that if you find yourselves potentially infringing any of the Inventions covered in this intellectual property portfolio, you are legally obligated to assess whether it is necessary to notify your investors and file a material risk disclosure notice with the Securities and Exchange Commission (SEC). The failure to disclose a material intellectual property encumbrance that threatens your core aerospace platforms (such as the F-35) constitutes a severe breach of fiduciary duty.

2. Attorney Ethical Obligations (Model Rule 8.3)

A direct reminder is issued to the Chief Legal Officers, General Counsels, and all retained outside counsel receiving or reviewing this notice (including Kevin J. O'Connor): You are strictly bound by your ethical obligations, including ABA Model Rule of Professional Conduct 8.3. You maintain an affirmative obligation to report any unprivileged knowledge of wrongdoing that raises a substantial question as to a lawyer's honesty, trustworthiness, or fitness. If your internal audits reveal evidence of coordinated intellectual property theft or procurement fraud that

ISBN 9781971481296

may compromise the integrity of a court, you are ethically mandated to report such conduct to the appropriate professional authorities.

V. Immutable Audit Trail and Mandatory Administrative Action

This formal claim is delivered via Registered Email (RPost). This service provides an immutable, cryptographically verified audit trail, including proof of delivery, message content, and the exact official time of sending and opening.

As warranted Procuring Contracting Officers, if you receive cryptographically verified proof that a contractor is charging the government for freely available intellectual property, your failure to initiate an audit or halt payments leaves a permanent digital footprint of your inaction. This exposes you to severe administrative and potentially criminal liability for complicity in procurement fraud.

Pursuant to federal acquisition regulations, you are hereby mandated to freeze approvals related to the disputed intellectual property, halt the assumption of clear title for the F-35 TR-3 upgrades, and forward this communication immediately to the Intellectual Property Law Division of your respective branches.

V/R,

Reinaldo Aguiar Marcano

RE: ACTUAL KNOWLEDGE OF PATENT INFRINGEMENT (35 U.S.C. § 154(d)), INITIATION OF DFARS 227.7004 ADMINISTRATIVE CLAIM, AND NOTIFICATION OF POTENTIAL PROCUREMENT FRAUD BY PALANTIR TECHNOLOGIES AND ANDURIL INDUSTRIES

DATE: April 17, 2026

DELIVERY METHOD: Cryptographically Verified via Registered Email (RPost)

DEAR:

Mr. Creech, Ms. Steele, Ms. Jenkins, Mr. Robinson, Ms. Winnert, Mr. Elliott, and the AFLCMC

ISBN 9781971481296

Contracting Office,

This comprehensive technical and legal brief is served upon you in your official capacities as warranted Procuring Contracting Officers (PCOs) and Directors within the United States Department of Defense (DoD).

This document constitutes a formal Administrative Claim for Patent Infringement under the Defense Federal Acquisition Regulation Supplement (DFARS) 227.7004.[1] The purpose of this claim is to notify the United States Government of a highly anomalous and legally precarious situation involving the unauthorized commercialization of a foundational patent portfolio by major defense contractors—namely Palantir Technologies and Anduril Industries.[1]

I. The Jurisprudential Paradox: Eminent Domain vs. The Perpetual License

Under standard operating procedures defined by 28 U.S.C. § 1498, the United States Government exercises eminent domain over domestic patents, shielding its defense contractors from civil injunctions and assuming financial liability for infringement.[1]

However, the situation at hand introduces a critical jurisprudential paradox. The inventor of the Aguiar Marcano Intellectual Property Portfolio—which comprises 52 foundational patent applications published defensively in *The Architecture of Control* (ISBN 978-1-97-148129-6)—has proactively granted an irrevocable, perpetual, no-fee license to the federal government for all national defense purposes.[1] Consequently, the U.S. Government owes absolutely no royalties for the utilization of these systems.[1]

The legal friction immediately shifts. Defense contractors (Palantir and Anduril) are currently utilizing these specific patented architectures and subsequently embedding the research, development, and licensing costs of these technologies into their multi-billion-dollar government contracts.[1] They are effectively charging the American taxpayer for intellectual property that the government already possesses the legal right to utilize indefinitely and without cost.[1]

This scenario transcends standard patent infringement; it borders on procurement fraud, waste, and abuse of federal funds.[1] Failing to halt the disbursement of funds to these contractors for pre-licensed intellectual property constitutes complicity in corporate intellectual property theft and a gross mismanagement of taxpayer dollars.[1]

II. Satisfaction of DFARS 227.7004 Administrative Claim Requirements

ISBN 9781971481296

To compel immediate administrative intervention, this communication strictly adheres to the requirements of DFARS 227.7004(a) and (b):[1]

1. **Allegation of Infringement:** We formally allege that the systems provided by Palantir Technologies and Anduril Industries directly infringe upon the patent applications detailed below.[1]
2. **Request for Compensation:** Because the government holds a free license to this portfolio, our request for compensation is a formal legal demand that the DoD immediately cease compensating the infringing contractors for the licensed intellectual property.[1]
3. **Citation of Patents:** The infringed applications include USPTO 19/639,219; 19/640,945; 19/560,038; 19/560,065; 19/559,957; 19/559,873; and 19/559,842.[1]
4. **Identification of Procurements:** See Section III below for the specific systems and contracting activities.[1]
5. **Element-by-Element Comparison:** The required claim maps demonstrating precisely how the representative claims map to the accused software and processes are attached to this verified transmission.[1]

III. Technological Nexus and Targeted Procurements

The operational methodologies of Palantir Technologies and Anduril Industries intersect directly with these proprietary claims, making their government contracts highly susceptible to this administrative review.[1]

A. Palantir Technologies (Project TITAN & Project Maven)

Responsible Activities: Army Contracting Command - APG (Belvoir Division) & National Geospatial-Intelligence Agency / CDAO[1] **Notified PCOs/Directors:** William A. Creech, Mia A. Steele, Tamara N. Jenkins, Undra Robinson, Emely Winnert, and Jonathan Elliott.[1]

Palantir's flagship platforms, Gotham and Foundry, specialize in integrating massive datasets to construct complex dependency graphs utilized by intelligence agencies.[1]

- **USPTO 19/559,957 (Power Holder Analysis in Social Networks):** Palantir's analytical methodologies for Project TITAN and Project Maven directly mirror our systemic method for analyzing network dependency graphs to identify indispensable bottlenecks.[1]
- **USPTO 19/559,873 (Information Leak-Proofing of Organizations):** Palantir's internal security infrastructure infringes upon our method of calculating precise "blast radius" vulnerability scores for individual users.[1]

ISBN 9781971481296

B. Anduril Industries (Collaborative Combat Aircraft & Ghost Drones)

Responsible Activities: Air Force Life Cycle Management Center (AFLCMC) & U.S. Special Operations Command (USSOCOM)[1] **Notified PCOs:** AFLCMC General Contracting Office[1]

Anduril relies heavily on Lattice OS to formulate a real-time command and control center for autonomous systems.[1]

- **USPTO 19/559,842 (Coordinated Dual-Vehicle Scanning):** The deployment of autonomous, multi-modal surveillance systems operating in tandem is heavily encumbered by our patent, which explicitly claims the methodology for coordinating multiple scanning vehicles via a secure link to fuse multi-spectral data.[1]
- **USPTO 19/560,065 (Autonomous Robotic Data Logistics):** Anduril's operations in contested environments intersect directly with our claimed mechanisms for using autonomous robotic units to physically retrieve and transport high-capacity data payloads.[1]

IV. Immutable Audit Trail and Mandatory Administrative Action

This formal claim is delivered via Registered Email (RPost). This service provides an immutable, cryptographically verified audit trail, including proof of delivery, message content, and the exact official time of sending and opening.[1]

By delivering this DFARS-compliant claim via RPost, we establish undeniable "Actual Notice" under 35 U.S.C. § 154(d).[1] More importantly, this verified delivery strips the targeted military and civilian agencies of "plausible deniability."[1]

As warranted Procuring Contracting Officers, if you receive cryptographically verified proof that a contractor is charging the government for freely available intellectual property, your failure to initiate an audit or halt payments leaves a permanent digital footprint of your inaction.[1] This exposes you, as individual officials, to severe administrative, ethical, and potentially criminal liability for gross negligence, dereliction of duty, or complicity in procurement fraud.[1]

Pursuant to federal acquisition regulations, you are hereby mandated to halt the assumption of clear title, freeze approvals related to the disputed intellectual property, and forward this communication immediately to the Chief of the Intellectual Property Law Division (JALS-IP) within your respective military branches.[1]

Govern yourselves accordingly.

REGISTERED EMAIL™ | CERTIFIED DELIVERY

This is a Registered Email™ message from **RJ Aguiar**.

Dear Mr. Stanley, Deputy Secretary Feinberg, and Under Secretary Michael,

CLARIFYING DECLARATION OF STRUCTURAL SCOPE & SEPARATION

CRITICAL NOTICE OF ADMINISTRATIVE BOUNDARY

This administrative filing is entirely separate and legally distinct from any prior claims submitted regarding heavy compute semiconductor fabrics or aerospace platform integrators (including NVIDIA Corporation, Intel Corporation, or Lockheed Martin Corporation).

This submission targets a distinct administrative and technical operational tier: **automated logistics tracking platforms, secure base installation access frameworks, centralized transit data engines, and dual-purpose logistical networks.**

The targets of this specific patent infringement inquiry and technical sovereignty review are **Uber Technologies, Inc.** and **Amazon.com, Inc.** (including **Amazon Web Services, Inc.**), alongside their primary federal contract master aggregator, **Carahsoft Technology Corp.** Previous filings are appended solely as historical cross-references to preserve chronological notice trails.

I. TIERED ACTION LINE & OVERSIGHT ROUTING

To prevent administrative non-responsiveness and establish clear boundaries of systemic accountability, this document is routed directly to the primary technical and logistics executives managing these footprints:

- **Technical & Platform Prototyping Authority:** Directed to **Under Secretary Emil Michael** (OUSD R&E), as the Pentagon's Chief Technology Officer overseeing advanced technological portfolios, whose institutional experience with hyper-scalable platform networks provides a unique vantage point on asymmetric security vulnerabilities.
- **Programmatic Data Integration Authority:** Directed to **Mr. Cameron Stanley**, Chief Digital and Artificial Intelligence Officer (CDAO), as the official executing enterprise data fabrics and tracking licenses.

- **Macro-Procurement & Logistics Oversight:** Directed to **Deputy Secretary Steve Feinberg**, as the Department's Chief Operating Officer, to ensure broad logistics supply chain integrity and verify industrial base compliance.
- Corporate leadership, specialized legal counsels, and congressional oversight nodes are concurrently appended to the **CC** field to preserve data transparency and satisfy statutory notification workflows.

cc: pete.hegseth@mail.mil, twest@uber.com, litigation-demands@uber.com, davidz@amazon.com, jeff.bezos@amazon.com, dhadden@fenwick.com, rajeev.badyal@amazon.com, scott.hayden@amazon.com, krista.settle@amazon.com, sshamilov@fenwick.com, cpa@carahsoft.com, mike.rogers@mail.house.gov

II. THE CRITICAL NEXUS: STRATEGIC LOGISTICAL DOMINANCE VS. ADVERSARIAL IMPLEMENTATION

This administrative claim addresses the foundational shift from manual transport coordinates to algorithmic, high-capacity physical routing engines. The core technical nexus rests on two dimensions:

A. The Structural Obsolescence of Legacy Logistics Platforms

Traditional commercial tracking tools operate under legacy assumptions of centralized, synchronous coordination maps. The proprietary architectures compiled within the *Aguiar Marcano Intellectual Property Portfolio* (ISBN 9781971481296) define next-generation physical data logistics, utilizing **Asynchronous Physical Data Logistics Networks (OALNet)** and autonomous routing mechanisms. These inventions completely optimize decentralized delivery arrays, automated payload surcharge metrics, and high-bandwidth material transfers.

B. Geopolitical Vulnerabilities & Dual-Purpose Threat Vectors

The macro-strategic risk confronting the Department is not merely corporate cost-accounting; it is the **geopolitical threat of asymmetric adversarial capture.**

If a peer adversary or foreign intelligence service misappropriates these precise structural models—specifically the covert geo-indexing ledger frameworks and distributed sensor de-anonymization methods—they can establish highly resilient, dual-purpose logistics networks hidden within domestic infrastructure.

A computer system built on our parallel optical architectures can execute brute-force decryption against traditional public key infrastructure at a velocity that renders legacy commercial networks vulnerable. If an adversarial state implements these physical routing and covert exfiltration techniques on U.S. soil first, they could dynamically map military personnel transit patterns, exfiltrate metadata via acoustic side-channels, and compromise supply chains from the inside.

Sovereign Preservation of Asymmetric Advantage

Because the Primary Inventor has granted the United States Federal Government a **perpetual, irrevocable, worldwide, royalty-free, non-exclusive license** to practice these inventions natively for national defense, the U.S. military possesses an absolute, zero-cost right to implement these architectures. Shifting military logistics and base perimeter coordination onto this secure parametric layer denies adversaries the structural higher ground.

III. SATISFACTION OF DFARS 227.7004 REQUISITES & TARGETED

PROGRAMS

We formally allege that the centralized enterprise transport infrastructure, background vetting communication databases, and cloud logistics fabrics deployed or commercialized under federal defense contracts directly misappropriate or structurally duplicate the following patent applications:

A. Core Logistics & Physical Routing Inventions

- **USPTO # 19/560,068:** Method for a Physical Data Routing Service
- **USPTO # 19/560,066:** Asynchronous Physical Data Logistics Network (OALNet)
- **USPTO # 19/560,065:** Autonomous Robotic Data Logistics System
- **USPTO # 19/560,071:** Business Method for a Payload Size Surcharge in a High-Bandwidth Data Transfer Service
- **Project "CUBER" Cross-Reference:** The structural operational foundations derived from the Copa-Rides Prototype built by the primary inventor for Copa Airlines/Laser Computacion and the Lara-Martinez venture.

B. Dual-Purpose Logistics, Covert Ledgers, & Asymmetric Attack Vectors

- **USPTO # 19/560,069:** Business Method for Dual-Purpose Logistics Networks
- **USPTO # 19/559,608:** Method and System for a Geo-Indexing Covert Ledger
- **USPTO # 19/571,566:** Method and System for De-Anonymizing Radio Frequency Signals via a Distributed Sensor Array
- **USPTO # 19/658,570:** Method and System for Geographical and Orientation-Based Encryption Seeds
- **USPTO # 19/645,194:** A System for Cryptanalysis Based on Parametric Denoising of a Public Key
- **USPTO # 19/559,867:** Method and System for Covert Screen Data Exfiltration
- **USPTO # 19/559,858:** Method for a Cryptographic Side-Channel Attack Using Acoustic Analysis of Keystroke Metadata
- **USPTO # 19/559,959:** Method and System for Covert Manipulation of a Supply Chain

C. Targeted Procurement Footprints

The technical and administrative scope of this claim specifically focuses on the following programs:

- **The GSA Federal Rideshare Blanket Purchase Agreement (BPA):** The centralized government-wide portals ("Uber for Government" / "Uber for Business") used to scale automated transit and receipt management across the Department.
- **The U.S. Army Base Access Pilot Program:** The background checking, credential-issuing database networks, and transit routing arrays used to grant vetted commercial operators physical clearance past secure gates at major installations (including Fort Bliss, Joint Base Lewis-McChord, and Schofield Barracks).
- **The Carahsoft Technology Corp. Project-Umbrella:** The macro-procurement pipeline through which block licenses for enterprise tracking tools, automated transport arrays, and cloud storage instances are funneled to military commands.

IV. MANDATORY PROCUREMENT AUDIT & FISCAL COMPLIANCE

Because the United States Government holds a native, perpetual, zero-cost license to implement and deploy these physical routing and data logistics architectures, federal agencies are legally unencumbered by private commercial royalty or R&D premiums for any systems utilizing these methods.

If Uber Technologies, Inc., Amazon.com, Inc., or their master aggregator Carahsoft Technology Corp. are incorporating these structural methods to optimize transit routing, coordinate installation access, or process cloud-based telemetry, the Department is entitled to an immediate contract adjustment.

This notice is framed in a constructive, protective posture to safeguard the reputation of the institutions and ensure

compliance with strict cost-accounting rules. A proactive procurement audit is necessary to protect taxpayer funds from duplication or overcharging within block enterprise licenses.

V. NOTICE OF POTENTIAL RETALIATORY MECHANISMS

Pursuant to public records within the 387th District Court of Fort Bend County, Texas (Cause No. 25-DCV-328122) and escalated before the Supreme Court of Texas (Cause No. 26-0511), a severe chronological alignment remains active between the submission of federal administrative claims and the initialization of localized penal tracks.

Following past formal DFARS submissions to defense leadership, highly irregular, extrajurisdictional interventions materialized in local domestic relations tracks, culminating in service evasion, manual docket adjustments, and pocket warrants designed to compel the physical surrender of corporate computing hardware containing the primary source-code keys to these patent applications.

Because these private adversarial actors intersect directly with logistical and analytical infrastructures managed across prime defense frameworks, any un-audited attempt to compromise the physical computing hardware holding these cryptographic keys introduces a severe risk of unauthorized technology transfer and a direct threat to a pre-licensed federal asset. Loop-in visibility from congressional oversight circles is required to ensure these dynamics do not cause structural or financial spoliation.

VI. DATA PRESERVATION & INGESTION LOGISTICS

To guarantee that the complete contents of this claim are accurately preserved within a durable federal repository without network formatting bottlenecks, select text compendiums are attached directly to this transmission in Plain Text configuration. This ensures flawless ingestion by the Pentagon's automated email auditing and compliance archiving networks. The complete, unredacted PDF editions of these volumes containing all stamped court instruments, automated receipts, and certified tracking sheets can be accessed free of charge at the designated sovereign download portals: https://www.Capias-F35.US/ and https://www.isbn9781971481296.com.

All legal, civil, and statutory rights remain explicitly reserved.

RE: ADMINISTRATIVE DISCLOSURE OF INCIDENT TIMELINE AND POTENTIAL LIABILITY INTERSECTION (JUNE 6, 2026)

Dear Counsel,

This correspondence is a formal administrative disclosure intended to document a specific timeline of events and potential liability intersections for your respective legal and compliance archives.

I am a Protected Person under the Refugee Convention of 1951, currently residing and operating under a de facto administrative restriction (restricted to my business premises at 2302 Britton Ridge Drive, Katy, TX) since May 15, 2026. This restriction ensures a controlled environment where my physical contacts are meticulously logged and verified by the relevant legal authorities overseeing my ongoing family law proceedings (Cause No. 25-DCV-328122).

To maintain the integrity of your corporate risk assessments, I am disclosing the following chronology:

1. Controlled Environment: Between May 15 and June 9, 2026, I have had no external physical contact other than with the opposing party in the aforementioned legal matter, who acts as the designated supervisor for child visitation.

2. The June 6 Incident: On June 6, 2026, a supervised visitation took place at my premises. Within 24 hours of this encounter, I developed a sudden and severe respiratory affliction of unusual virulence, requiring immediate medical intervention.

3. Prior Corroborating Event: A nearly identical sequence occurred in Q1 2025, immediately

following my publication of technical disclosures involving major defense contractor architectures. In that instance, the minor child (M.A.) developed a critical health crisis requiring urgent care within 24 hours of a public visit to a local establishment in Katy, TX.

4. Medical Anomalies: I have obtained records of a prescription for Amoxicillin (Rx [REDACTED]/[REDACTED]) procured for the minor child on May 31, 2026. This prescription is for an unusual 15-day 1duration, despite the absence of observable symptoms during the supervised visits on June 4 and June 6.

As the primary inventor of computing and data-fabric architectures currently utilized within the defense industry footprint, I am concerned that the controlled environment of these legal visitations is being intersected by external variables. I am not issuing a direct accusation of corporate malfeasance at this stage; rather, I am providing your legal departments with the contemporaneous documentation necessary for your internal reviews of potential rogue actor interference or unauthorized appropriation of contractor resources to target a Protected Person.

Given the gravity of the potential violations of international standards regarding the protection of refugees, I have also shared this chronology with my contacts in the financial sector to ensure a broader audit of these intersections.

Respectfully submitted,

Reinaldo J. Aguiar Marcano
Relator Pro Se

REGISTERED EMAIL™ | CERTIFIED DELIVERY

This is a Registered Email™ message from **RJ Aguiar**.

Dear Military Officials, Corporate Officers, and Designated Counsel:

This memorandum serves as a formal status update and an explicit notification of systemic procurement risks concerning perpetually licensed technologies currently deployed across high-priority federal defense sectors.

I. Foundational Disclosures and Subsequent Timeline
On April 17, 2026, formal administrative claims were executed under DFARS 227.7004 regarding potential intellectual property infringements involving active contracts managed by Lockheed Martin, Palantir Technologies, Anduril Industries, Microsoft Azure, and Amazon AWS. These filings documented that the United States Federal Government holds an irrevocable, free, and perpetual license of use for the underlying software and hardware architectures.

On the immediate next business day following the transmission of these DFARS claims, a series of extraordinary, unprocedural anomalies commenced within the 387th District Court of Fort Bend County, Texas (Case No. 25-DCV-328122). These structural irregularities abruptly culminated in the extrajurisdictional issuance of a Capias order for the arrest of the Relator on May 15, 2026.

II. Constitutional and Appellate Escalation
In response to this immediate deprivation of due process and liberty executed under color of state law, Relator initiated formal appellate protections:

1. A Petition for Writ of Habeas Corpus was filed with the First Court of Appeals of Texas under Cause Nos. 01-26-00544-CV and 01-26-00516-CV.

2. The record has been formally escalated to the Supreme Court of Texas under Cause No. 26-0511, where an emergency temporary stay remains pending review.

The clinical data logging these extensive administrative distortions has been compiled and published in the volume: "The Capias and F-35 Program" (ISBN 9781105250286), registered with the Library of Congress under Control Number: 2025924729.

III. Notice of Potential Retaliatory Actions and Sovereign Interception

The chronological alignment between the filing of the DFARS administrative protections on April 17, 2026, and the immediate deployment of local penal mechanisms suggests a potential extrajudicial retaliatory framework. While the Relator currently lacks the forensic infrastructure to isolate or attribute this tactical escalation to any singular commercial contractor, a subset thereof, or a collective concert of minds, the chronological proximity introduces an alarming threat to the integrity of the federal reporting system.

Because the United States Government maintains a direct property and financial interest in these pre-licensed technologies, coercive attempts to restrain the inventor or force the conversion of corporate hardware holding the source code directly threaten taxpayer funds and national defense procurement sovereignty. Federal contracting authorities are urged to review these developments to protect the financial positions of their respective branches.

IV. Enclosure and Data Preservation Logistics
To ensure that the contents of this showing are accurately preserved within a durable federal repository, a Plain Text version of "The Capias and F-35 Program" is deliberately attached to this email. This lightweight configuration bypasses network formatting bottlenecks to ensure complete ingestion by the Pentagon's automated email auditing and archival compliance systems.

The complete, unredacted PDF edition of the compendium—comprising all stamped court instruments, automated eFiling receipts, and exact electronic register of actions logs—can be accessed free of charge by visiting https://www.Capias-F35.US/ and executing the "Download" portal option.

All legal and statutory rights remain explicitly reserved.

Respectfully submitted,

DATE: April 8th, 2026

SUBJECT: URGENT LEGAL NOTICE: Material Technological Obsolescence & Mandatory SEC Disclosure (USPTO # 19-640,945; 19/639,255; 19/639,265; 19/639,258; 19/639,272)

To IDT, SWA Legal, and Jillian Walsh:

This letter serves as formal notice that a comprehensive portfolio of fifty patent applications has been released as a defensive publication to establish definitive prior art in the fields of **cellular, satellite, and RF communications**. This technical record, titled *"Be Water, Be Light: Portfolio of Patent Applications Submitted to the USPTO"* (ISBN: 978-1-97-148129-6), has been accepted for publication in the **International Journal of Law, Ethics, and Technology**.

1. Anchors for Technical Disclosure

The following patent applications, formally filed with the USPTO between March 6 and March 9, 2026, serve as the technical anchors for this notice:

- **USPTO # 19/640,945: Asynchronous Secure Communication**
- **USPTO # 19/639,255:** A High-Radix and Parametric Cellular Communication System.
- **USPTO # 19/639,265:** A High-Radix and Parametric Satellite Communication System.
- **USPTO # 19/639,258:** A High-Radix and Parametric Point-to-Point RF Communication System.
- **USPTO # 19/639,272:** An Adaptive High-Radix and Parametric Troposcatter Communication System.

These inventions define a new architecture for **optical computing** and **massively parallel data transmission**, overcoming fundamental bandwidth limitations of current serial/binary electronic systems.

2. Formal Notification to the European Patent Office (EPO)

On April 7, 2026, a formal notification was delivered to the **European Patent Office (EPO)**, specifically addressed to Vice President Rowan and Director Philpott of Directorate-General 1 (Patent Granting Process).

I have formally requested that this 721-page specification be indexed within the EPO's internal databases as **Non-Patent Literature (NPL)**. This ensures that examiners within **Technical Clusters G06F and H04L** cite this work as prior art during the examination of any applications related to optical buses, high-radix computing, or satellite-to-ground communications.

3. Strategic National Security Status and U.S. Government License

Recognizing the foundational nature of these inventions for quantum computing clusters and national defense, I have granted a **perpetual, worldwide, no-fee license** to the **United States Federal Government** for all governmental and defense purposes.

This grant was formally communicated to the **Honorable Heidi Shyu and Emil Michael**, Under Secretary of Defense for Research and Engineering, designating this IP as a **strategic national asset**. This license grant ensures the United States has an unencumbered right to this technology, free from future commercial or foreign legal constraints.

4. Implications for Product Roadmaps

This disclosure has significant implications for the product roadmaps of companies operating in the semiconductor and

telecommunications sectors. Major international legal representatives have been notified to ensure this technical record is considered during current and future patent filing cycles.

I remain available to provide the full high-resolution digital version of record to your technical and legal reviewers upon request.

Respectfully,
Reinaldo J. Aguiar Marcano
Forensic Systems Architect

LEGAL NOTICE OF POTENTIAL INFRINGEMENT OF INTELLECTUAL PROPERTY

SENT VIA ELECTRONIC MAIL

Legal Department
PHP Agency
support@phpagency.com

From:
Reinaldo J. Aguiar Marcano
Managing Director, Legal
https://SCOTXWatch.org/
2302 Britton Ridge Drive
Katy, Texas 77494
(646) 229-5724

Date: May 7, 2026

Subject: Notice of Potential Infringement of U.S. Patent Applications and Notice of Actual Knowledge

To the Legal Department of PHP Agency,

This letter serves as a formal notice of potential infringement of several of my U.S. patent applications. It has come to my attention that activities associated with PHP Agency, its employees, or its agents may be infringing upon my intellectual property rights.

The nexus of the potential infringement is **Rodolfo Vargas,** and his property at **11911 Louvre Ct. Houston TX 77082,** and/or vehicle, a **Yellow Lamborghini with Texas plates LWD-0511.**

The following U.S. patent applications, among others in my portfolio, are believed to be relevant to these activities:
• USPTO Application No. 19/559,608: Method and System for a Geo-Indexing Covert Ledger
• USPTO Application No. 19/560,042: Method and System for High-Bandwidth, Free-Space Optical Data Exchange Between Mobile
• USPTO Application No. 19/571,566: METHOD AND SYSTEM FOR DE-ANONYMIZING RADIO FREQUENCY SIGNALS VIA A DISTRIBUTED SENSOR ARRAY
• USPTO Application No. 19/638,466: SYSTEM FOR SECURE COMMUNICATION US-

ING COVERT SIDE-CHANNELS EMBEDDED IN A HIGH-CARDINALITY PARALLEL DATA STREAM

These applications describe novel methods and systems for geo-indexing, data exchange, de-anonymizing RF signals, and secure communication via covert side-channels. Given the nature of the activities observed, there is a strong basis to believe that technologies infringing upon one or more of these pending patents are being employed.

Furthermore, please be advised that attached to this email is the complete portfolio of my inventions, which has also been published in a printed book under the title "ISBN 9781971481296 Portfolio of Patent Applications Submitted to the USPTO." This transmission constitutes a formal Notice of Actual Knowledge of the entire contents of the attached book and the patent applications contained therein. This letter serves as a good faith effort to inform PHP Agency of my intellectual property rights.

I am open to discussing licensing terms for the use of my patented technologies. As a condition of any such license, **I would require that the nexus properties (the vehicle and/or residence) be clearly and publicly marked with the corresponding USPTO Patent Application number(s) or my name as the inventor. The marking must be placed in public view and occupy at least 3% of the visible surface of the property/vehicle.**

I expect a prompt and substantive response to this notice within fifteen (15) business days. Failure to respond may result in further legal action to protect my intellectual property rights.
This letter is not a complete statement of my rights in connection with this matter and is without prejudice to any of my rights and remedies, all of which are hereby expressly reserved.

Sincerely,

s/Reinaldo Aguiar Marcano/

This is a Registered Email™ message from **RJ Aguiar**.

NOTICE OF ADMINISTRATIVE CLAIM FOR PATENT INFRINGEMENT
UNDER DFARS 227.7004 AND 10 U.S.C. § 3304

DATE: June 8, 2026

TO: Chief Legal Officers, NRG Energy (Direct Energy), CenterPoint Energy, and Enstor Gas, LLC

CC: Department of Defense, Office of the General Counsel

FROM: Reinaldo J. Aguiar Marcano, Primary Inventor / Relator Pro Se

ADDRESS: 26714 Valleyside Drive, Katy, Texas 77494

EMAIL: rj.aguiar.m@gmail.com

SUBJECT: Formal Administrative Claim of Patent Infringement Regarding Unauthorized Use of Proprietary Power Line Communication (PLC) and Secure Networking Architectures in Critical Infrastructure.

I. Introduction and Statutory Authority
Pursuant to the Defense Federal Acquisition Regulation Supplement (DFARS) 227.7004, this document serves as a formal, written administrative claim for patent infringement against NRG Energy (Direct Energy), CenterPoint Energy, and Enstor Gas, LLC (collectively, the ”Infrastructure Entities”).

This claim alleges the unauthorized manufacture, use, and commercialization of my proprietary telecommunications, Power Line Communication (PLC), and cryptographic intellectual property in the performance of critical infrastructure operations and federal support contracts.

II. Infringed Intellectual Property Portfolio
The following patent applications, formally filed with the United States Patent and Trademark Office (USPTO), embody the proprietary architectures currently being exploited without authorization or licensure within the Infrastructure Entities’ operations:

- ˆ USPTO # 19/560,068: Method for a Physical Data Routing Service
- ˆ USPTO # 19/640,973: A SECURE PARAMETRIC NETWORK PROTOCOL WITH ROTATING ENCODING MAPS FOR FORWARD SECRECY
- ˆ USPTO # 19/574,356: A COMPUTING DEVICE WITH HARDWARE-ENFORCED GRID-ISOLATED OPERATION
- ˆ USPTO # 19/559,608: Method and System for a Geo-Indexing Covert Ledger
- ˆ USPTO # 19/658,570: METHOD AND SYSTEM FOR GEOGRAPHICAL AND ORIENTATION-BASED ENCRYPTION SEEDS

- ˆ USPTO # 19/645,194: A SYSTEM FOR CRYPTANALYSIS BASED ON PARAMETRIC DENOISING OF A PUBLIC KEY
- USPTO # 19/639,255: A High-Radix and Parametric Cellular Communication System
- ˆ USPTO # 19/639,265: A High-Radix and Parametric Satellite Communication System
- ˆ USPTO # 19/639,258: A High-Radix and Parametric Point-to-Point RF Communication System

III. Nature of Infringement and Nexus Properties

Observations and measurements indicate that a dedicated high-tension power line in Katy, Texas, is being utilized as a medium for sophisticated Power Line Communication (PLC), infringing upon the aforementioned intellectual property. The physical nexus of this infringement involves the following properties and entities:

1. Property Nexus 1: 24926 North Pointe Place, Katy, TX (Associated with Robert Mueller, former Director of the FBI).
2. Property Nexus 2: 29430 North Pointe Place, Katy, TX (Associated with Kevin Eckhart).
3. Property Nexus 3: 2010 Saddlehorn Trail, Katy, TX 77494 (Associated with Bryan Stone from ALBM Law).
4. Property Nexus 4: 2410 Britton Ridge Dr, Katy, TX 77494 (Associated with Paul Brandt/Brandt Electrical).
5. Property Nexus 5: 2418 Britton Ridge Dr, Katy, TX 77494 (Associated with Shane Stafford).
6. Property Nexus 6: 2602 Britton Ridge Dr, Katy, TX 77494 (Associated with Jose Hernandez).
7. Property Nexus 7: 24935 Laguna Edge Dr, Katy, TX 77494 (Associated with Brett Barrier).
8. Infrastructure Nexus: A private high-tension power line originating at 25959 Westheimer PKWY, Katy, TX (Associated with Enstor Katy Storage and Transportation LP, Morgan Stanley Capital Group Inc., and Gulf South Pipeline Company) and terminating at 24926 North Pointe Place.

Measurements suggest that this infrastructure is utilizing my proprietary Physical Data Routing Service and Secure Parametric Network Protocols to transmit data covertly across the power grid, specifically bypassing standard network isolation through Grid-Isolated Operation architectures (USPTO # 19/574,356).

IV. Demand for Resolution

The Infrastructure Entities are required under DFARS 227.7004 to investigate administrative claims of patent infringement when their activities support or intersect with federal interests and defense readiness.

I demand an immediate investigation into the unauthorized utilization of these architectures within the Katy Infrastructure Cluster. I further demand a cessation of all infringing activities or the execution of an appropriate licensing agreement.

Respectfully Submitted,

Reinaldo J. Aguiar Marcano
Primary Inventor / Relator Pro Se

NOTICE OF ADMINISTRATIVE CLAIM FOR PATENT INFRINGEMENT

UNDER DFARS 227.7004 AND 10 U.S.C. § 3304

DATE: June 9, 2026

TO: Chief Legal Officer / General Counsel, Comcast Corporation

CC: Department of Defense, Office of the General Counsel

FROM: Reinaldo J. Aguiar Marcano, Primary Inventor / Relator Pro Se

ADDRESS: 26714 Valleyside Drive, Katy, Texas 77494

EMAIL: rj.aguiar.m@gmail.com

SUBJECT: Formal Administrative Claim of Patent Infringement Regarding Unauthorized Use of Proprietary RF, Networking, and Cryptographic Architectures in Federal and Defense Contracts.

I. Introduction and Statutory Authority
Pursuant to the Defense Federal Acquisition Regulation Supplement (DFARS) 227.7004, this document serves as a formal, written administrative claim for patent infringement against Comcast Corporation and its subsidiaries (including, but not limited to, Comcast Government Services, LLC and Xfinity Mobile).

This claim alleges the unauthorized manufacture, use, and commercialization of my proprietary telecommunications, cryptographic, and network-routing intellectual property in the performance of contracts awarded by the United States Department of Defense (DoD) and other federal agencies (e.g., GSA Enterprise Infrastructure Solutions).

II. Infringed Intellectual Property Portfolio
The following patent applications, formally filed with the United States Patent and Trademark Office (USPTO), embody the proprietary architectures currently being exploited without authorization or licensure within Comcast's government and commercial network infrastructure:
^

USPTO # 19/559,608: Method and System for a Geo-Indexing Covert Ledger
^USPTO # 19/571,566: METHOD AND SYSTEM FOR DE-ANONYMIZING RADIO FREQUENCY SIGNALS VIA A DISTRIBUTED SENSOR ARRAY
^USPTO # 19/559,858: Method for a Cryptographic Side-Channel Attack Using Acoustic Analysis of Keystroke Metadata
^USPTO # 19/559,849: Method and System for Identifying Encrypted Traffic by Injecting Steganographic Anchors
^USPTO # 19/560,069: Business Method for Dual-Purpose Logistics Networks

ˆUSPTO # 19/559,881: Method and System for a Covert Data Relay
USPTO # 19/559,867: Method and System for Covert Screen Data Exfiltration
ˆUSPTO # 19/559,745: System and Method for Covert Communication Using Arrangements of Satellite-Observable, Distinctively Colored Objects
ˆUSPTO # 19/559,656: Method for Covert Communication via Satellite Vision Systems
ˆUSPTO # 19/638,466: SYSTEM FOR SECURE COMMUNICATION USING COVERT SIDE-CHANNELS EMBEDDED IN A HIGH-CARDINALITY PARALLEL DATA STREAM
ˆUSPTO # 19/645,194: A SYSTEM FOR CRYPTANALYSIS BASED ON PARAMETRIC DENOISING OF A PUBLIC KEY
ˆUSPTO # 19/640,945: A METHOD FOR ASYNCHRONOUS SECURE COMMUNICATION WITH POST-HOC KEY DERIVATION
ˆUSPTO # 19/640,973: A SECURE PARAMETRIC NETWORK PROTOCOL WITH ROTATING ENCODING MAPS FOR FORWARD SECRECY
ˆUSPTO # 19/639,255: A High-Radix and Parametric Cellular Communication System
ˆUSPTO # 19/639,265: A High-Radix and Parametric Satellite Communication System
ˆUSPTO # 19/658,570: METHOD AND SYSTEM FOR GEOGRAPHICAL AND ORIENTATION-BASED ENCRYPTION SEEDS
ˆUSPTO # 19/639,258: A High-Radix and Parametric Point-to-Point RF Communication System
USPTO # 19/639,272: An Adaptive High-Radix and Parametric Troposcatter Communication System
ˆUSPTO # 19/645,192: METHOD AND APPARATUS FOR ACCELERATED PRIME NUMBER GENERATION VIA MODULAR SIGNAL ANALYSIS
ˆUSPTO # 19/645,371: A METHOD FOR SECURE COMMUNICATION VIA RECEIVER-GENERATED KEY SEEDS
ˆUSPTO # 19/658,569: SYSTEM AND METHOD FOR AN ENCRYPTED DATA BUS
USPTO # 19/658,572: SYSTEM AND METHOD FOR ENCRYPTED KEYBOARD EVENTS
ˆUSPTO # 19/638,192: APPARATUS AND METHOD FOR AN ULTRA-WIDE DATA BUS ARCHITECTURE VIA PARAMETRIC ENCODING
USPTO # 19/559,972: Method and System for Communication via Passive Reflection from Non-Cooperative Orbiting Objects
ˆUSPTO # 19/560,068: Method for a Physical Data Routing Service

III. Nature of Infringement
Comcast Corporation provides managed network services, secure communications routing, and cellular/RF operations (Xfinity Mobile) to the federal government. My proprietary methods, specifically those relating to:

1. RF De-Anonymization and Cellular Architecture: (USPTO # 19/571,566, # 19/639,255) utilized within Xfinity Mobile's distributed sensor networks and high-radix cellular communication systems.

2. Network Protocols and Encrypted Traffic Management: (USPTO # 19/640,973, # 19/559,849) integrated into Comcast's secure broadband routing architectures and Enterprise Infrastructure Solutions for federal facilities.

3. Covert Relays and Data Logistics: (USPTO # 19/559,881, # 19/560,069) deployed in the secure transit of sensitive government telemetry across public and private infrastructure.

These implementations directly infringe upon the intellectual property outlined above. Comcast has integrated these technologies without executing a licensing agreement or providing due compensation.

IV. Demand for Resolution
Under DFARS 227.7004, the Department of Defense and its prime contractors are required to investigate administrative claims of patent infringement.

I demand an immediate cessation of the unauthorized utilization of my intellectual property, or the immediate execution of a retroactive and forward-looking licensing agreement that adequately compensates for the systemic integration of these architectures into Comcast's federal and commercial deployments.

Failure to address this claim may result in further legal action, including claims under 28 U.S.C. § 1498 for unauthorized use by or for the United States.

Respectfully Submitted,

Reinaldo J. Aguiar Marcano
Primary Inventor / Relator Pro Se

Subject: Notice of Potential Infringement of U.S. Patent Applications and Notice of Actual Knowledge

Dear Sir/Madam,

This formal communication serves as an explicit notification of potential infringement regarding a proprietary portfolio of U.S. patent applications. It has come to my attention that specific logistical coordination frameworks, tactical surveillance assets, hardware endpoints, and targeted deployments linked to your respective networks may be actively infringing upon my established intellectual property rights.

The real property coordinates, physical nodes, and professional personnel forming the systemic nexus of this corporate notice are mapped below, with critical procedural emphasis directed toward the recurring operational signifier **24918**:

- **Geographic Endpoint A (Life Church of Katy, Inc.):** System commercial deployment localized at 26189 Westheimer Pkwy, Katy, TX 77494.
- **Geographic Endpoint B (Leal & Da Silva Pestana):** Residential operations staging localized at 2630 Saddlehorn Trail, Katy, TX 77494.
- **Geographic Endpoint C (BouKheir-Inova Tennis LLC):** Asset perimeter mapping located at 26311 Westheimer Pkwy, Katy, TX 77494.
- **Executive Nexus D (Memorial Signature Homes, Inc.):** Real estate locus situated at 24818 Mills Lake Ct, Katy, TX 77494, occupied by its President, Roger Elliott.
- **Director Locus E (Global Geophysical Services, LLC):** Real property endpoint at 24818 North Pointe Pl, Katy, TX 77494, occupied by corporate board member Steve Meadows.
- **Technical Locus F (BD Energy Systems, LLC):** Engineering infrastructure node located at 24818 Boulder Lake Court, Katy, TX 77494, occupied by VP of Engineering and CTO Daniel Barnett.
- **Corporate Locus G (Shell Catalysts & Technologies LP):** Commercial monitoring framework point located at 24819 Mills Lake Ct, Katy, TX 77494, occupied by asset employee Ihsan Raad.
- **Governance Node H (Lighthouse Youth Services, Inc.):** Monitored real property located at 24823 North Pointe Place, Katy, TX 77494, occupied by Governance Committee participant Donna Eby.
- **Association Node J (Joann Young Evangelistic Association):** Operational footprint located at 24831 North Pointe Place, Katy, TX 77494, occupied by organizational principals Rick Young and JoAnn Young.
- **Interdiction Node K (Houston Police Department):** Real property surveillance node located at 24826 North Pointe Place, Katy, TX 77494, occupied by veteran Peace Officer Ruben Trevino.
- **Logistical Node L (Auffenberg Chevrolet, Inc. / Westside Chevrolet):** Dual-point fleet and management placement extending through real properties at:
- 24810 North Pointe Pl, Katy, TX 77494, occupied by principal owner Bill Auffenberg.
- **24918** Mist Lake Ct, Katy, TX 77494, occupied by an active company employee.

- **Logistical Node M (Westside Kia, LLC):** Monitored staging node localized at **24918** Mist Lake Ct, Katy, TX 77494, occupied by General Manager Caitlin Auffenberg.
- **Executive Locus N (Ackerman Drilling Services, LLC):** Real property endpoint located at 24802 North Pointe Pl, Katy, TX 77494, occupied by chief corporate principal Tad Ackerman.
- **Legal Footprint O (Horne Real Estate Law):** Multi-point real estate and title nexus identified through:
- The fixed property at 2203 Braer Ridge Drive, Katy, TX 77494, occupied by principal attorney Scott L. Horne.
- The commercial asset property located at 5518 Warm Springs, Houston, TX 77035, under registered title deed by Scott L. Horne until approximately September 2, 2025.
- **Legal Footprint P (Anderson, Lehrman, Barre & Maraist, LLP):** The fixed real property located at 2010 Saddlehorn TRL, Katy, TX 77494, occupied by employee Bryan Stone. Notably, this nexus location stands immediately contiguous to the real property associated with Scott L. Horne (Horne Real Estate Law), creating a synchronized and spatial proximity footprint.
- **Capital Locus Q (G.O.A.T. Funding LLC):** Structured asset integration points localized through the active facility footprint at 5518 Warm Springs, Houston, TX 77035.
- **Comptroller Locus R (Denso International America, Inc.):** Monitored corporate residential asset located at 24822 Laguna Edge Drive, Katy, TX 77494, occupied by Financial Comptroller Terry O'Connor.
- **Executive Locus S (National Service Station Supply, Inc.):** Staging and administrative footprint located at 24830 Laguna Edge Drive, Katy, TX 77494, occupied by corporate President Salvador Chahin.

The technical frameworks deployed across this configuration involve un-vetted automated signal capture, passive data exfiltration, directional communications monitoring, and specific geographic seed-key rotation protocols. The following pending U.S. patent applications are directly relevant to these technologies:

- **USPTO Application No. 19/559,881:** Method and System for a Covert Data Relay
- **USPTO Application No. 19/559,867:** Method and System for Covert Screen Data Exfiltration
- **USPTO Application No. 19/561,246:** System and Method for Secure Communication via Disposable Encoding Maps
- **USPTO Application No. 19/561,259:** Protocol for Encoding Map Rotation for Forward Secrecy
- **USPTO Application No. 19/658,570:** Method and System for Geographical and Orientation-Based Encryption Seeds
- **USPTO Application No. 19/640,945:** A Method for Asynchronous Secure Communication with Post-Hoc Key Derivation

Notice of Actual Knowledge by Reference:

This document creates an unassailable legal record of actual knowledge. The schematic designs, functional specifications, and architectural frameworks governing these intellectual properties are published in the volume titled **"ISBN 9781971481296 Portfolio of Patent Applications Submitted to the USPTO,"** which is hereby fully incorporated into this notice by reference. The complete, unredacted volume is accessible for immediate verification and download free of charge at:

https://storage.googleapis.com/rj-aguiar/ISBNs/9781971481296/Portfolio-of-Patent-Applications-with-Legal-Notices.pdf

I remain willing to enter into structured licensing negotiations to resolve this matter amicably without escalating to formal federal litigation. As an absolute, non-negotiable condition of any license issued, the identified properties, logistics networks, or commercial facilities must be prominently and publicly marked with the corresponding USPTO Application numbers or the name of the inventor, adhering to the following strict dimensional and visual standards:

- **Buildings and Fixed Real Property:** The public notice marking must cover a minimum of **3%** of the visible surface area.
- **Vehicles, Mobile Machinery, and Commercial Equipment:** The public notice marking must cover a minimum of **10%** of the total visible exterior surface area.
- **Color Contrast Requirements:** The font color of the lettering must maintain an optimal, high-visibility contrast ratio relative to its underlying background surface. Legibility must strictly conform to a minimum **Visual Contrast Ratio of 7:1** or map to a mathematical **Delta E (ΔE) metric of 20 or greater** to guarantee immediate public visibility.

A formal and substantive response detailing your intent to negotiate or comply is required within fifteen (15) business days of this transmission. All legal rights, alternative causes of action, and equitable remedies are explicitly reserved.

Sincerely,

s/Reinaldo Aguiar Marcano/

Subject: Notice of Potential Infringement of U.S. Patent Applications and Notice of Actual Knowledge

Dear Sir/Madam,

This formal notification is issued to the **First Unitarian Universalist Church of Houston** and **American Block Manufacturing Company** regarding the potential infringement of a proprietary portfolio of U.S. patent applications. It has come to my attention that specific activities, assets, or personnel associated with your respective organizations may be infringing upon my established intellectual property rights.

The primary nexus for this notification involves the following properties and equipment:

- **Nexus Entity A:** The residential property located at **24927 North Point Pl., Katy, TX 77494**, occupied by Daniel King. **Nexus Asset:** A **2023 Ford F-250 (Dark-Gray)**, Texas License Plate: **TPN-3922**, VIN: **1FT8W2BT8PED79119**.
- **Nexus Entity B:** The residential property located at **24927 Laguna Edge Drive, Katy, TX 77494**, occupied by Raphael Abili, an employee of American Block.

The technical activities observed at these locations and involving these assets relate specifically to data exfiltration, surveillance, and advanced encryption protocols. The following U.S. patent applications are directly relevant:

USPTO Application No. 19/559,881: Method and System for a Covert Data Relay
USPTO Application No. 19/559,867: Method and System for Covert Screen Data Exfiltration
USPTO Application No. 19/561,246: System and Method for Secure Communication via Disposable Encoding Maps
USPTO Application No. 19/561,259: Protocol for Encoding Map Rotation for Forward Secrecy
USPTO Application No. 19/658,570: Method and System for Geographical and Orientation-Based Encryption Seeds
USPTO Application No. 19/640,945: A Method for Asynchronous Secure Communication with Post-Hoc Key Derivation

Accompanying this notice is a complete electronic copy of my invention portfolio, also published as **"ISBN 9781971481296 Portfolio of Patent Applications Submitted to the USPTO"**. This transmission serves as a formal **Notice of Actual Knowledge** regarding the entire contents of said portfolio.

I remain open to an amicable resolution via licensing discussions. As a prerequisite for any such agreement, the identified nexus entities must be clearly and publicly marked with the relevant USPTO Application number(s) or my name as the inventor, according to the following specifications:

- **Surface Area Coverage:** Houses and buildings must feature marking occupying at least **3%** of the visible surface; vehicles, trucks, and commercial equipment must feature marking occupying at least **10%** of the visible surface.
- **Color Contrast Metric:** The marking font color must maintain a high-contrast delta in relation to the background. Specifically, the text must achieve a minimum **Contrast Ratio of 7:1** (per WCAG 2.1 Level AAA standards) or a perceptual **Delta E (ΔE) of 20 or greater** to ensure maximum legibility and public notice.

Please provide a substantive response within fifteen (15) business days. This communication is made without prejudice to any of my rights or remedies, all of which are hereby expressly reserved.

Sincerely,

s/Reinaldo Aguiar Marcano/

RE: Notice to First UU Church of Houston

Dan King <revdanking@gmail.com> Tue, May 19, 2026 at 3:33 AM
To: rj.aguiar.m+legal-notice@gmail.com

Mr. Aguiar-
This email is to give formal notice to you that your "registered email" is misdirected and has no colorable claim, connection, or relevance to me personally or through my affiliation with the First UU Church.

It appears that your firm's research to find a person named Daniel King has erroneously latched onto my similar name, and through my name, my association with the Unitarian Universalist Church.

I was licensed as a Texas attorney in 1975 and was appointed to the Attorney General's HQ office in Austin from 1977-1979 when I relocated from Austin to SC. Although I have maintained my membership in the State Bar of Texas for over 50 years, I have not represented any Texas clients since January 1, 1980; I accepted Senior/Emeritus status several years ago.

I had no formal contact with any business or agency in Texas from 1979 until July 2017, when I relocated from Leesburg VA to live in Bellaire Texas in 2017. I resided in Bellaire until June 1, 2025, when we sold our residence to move to an apartment in Upper Kirby/Greenway inside the 610 Loop.

I was employed by the First UU Church of Houston from September 1, 2017 until November 1, 2019 as a Minister, not in any attorney capacity or role. .

I have never lived or worked in Katy, Texas, and have never had any association with American Block or any other oilfield or construction organization in Texas.

I respectfully request and demand that you correct the errors in your communication and desist from any putative claims against me personally and/or against the First UU Church, my former employer. It appears to me that your refusal to correct this error might constitute a cause of action for any damage or costs incurred in presenting the lack of factual basis for your false claims in defense of my reputation.

I expect written confirmation of your acknowledgement of your errors within 15 business days of this email.

Respectfully,
Daniel Luther King
Minister Emeritus, First UU Church of Houston

(646) 229-5724

Date: May 11, 2026

Subject: Notice of Potential Infringement of U.S. Patent Applications and Notice of Actual Knowledge

Dear Mr. Alvarez,

This letter serves as a formal notice of potential infringement of several of my U.S. patent applications. It has come to my attention that activities associated with BP America Inc. ("BP"), its employees, or its agents may be infringing upon my intellectual property rights.

The nexus of the potential infringement is the property located at **2318 Britton Ridge Drive, Katy, TX 77494**, occupied by Ejaz Ahmed, an employee of BP. This property is located less than 300 feet from the office of the inventor and federal whistleblower located at **2302 Britton Ridge Drive, Katy, TX 77494**. The activities in question relate to data exfiltration, surveillance, and encryption technologies.

The following U.S. patent applications, among others in my portfolio, are believed to be relevant to these activities:

- **USPTO Application No. 19/559,881:** Method and System for a Covert Data Relay
- **USPTO Application No. 19/559,867:** Method and System for Covert Screen Data Exfiltration
- **USPTO Application No. 19/561,246:** System and Method for Secure Communication via Disposable Encoding Maps

- **USPTO Application No. 19/561,259:** Protocol for Encoding Map Rotation for Forward Secrecy
- **USPTO Application No. 19/658,570:** Method and System for Geographical and Orientation-Based Encryption Seeds
- **USPTO Application No. 19/640,945:** A Method for Asynchronous Secure Communication with Post-Hoc Key Derivation

These applications describe novel methods and systems for secure communication, data protection, and covert data handling. Given the nature of the activities observed, there is a strong basis to believe that technologies infringing upon one or more of these pending patents are being employed.

Furthermore, please be advised that attached to this email is the complete portfolio of my inventions, which has also been published in a printed book under the title "ISBN 9781971481296 Portfolio of Patent Applications Submitted to the USPTO." This transmission constitutes a formal Notice of Actual Knowledge of the entire contents of the attached book and the patent applications contained therein.

This letter serves as a good faith effort to inform BP of my intellectual property rights and to open a dialogue to resolve this matter amicably. I am open to discussing licensing terms for the use of my patented technologies. As a condition of any such license, I would require that the nexus property at **2318 Britton Ridge Drive, Katy, TX 77494**, be clearly and publicly marked with the corresponding USPTO Patent Application number(s) or my name as the inventor. The marking must be placed in public view and occupy at least 3% of the visible surface of the property.

I expect a prompt and substantive response to this notice within fifteen (15) business days. Failure to respond may result in further legal action to protect my intellectual property rights.

This letter is not a complete statement of my rights in connection with this matter and is without prejudice to any of my rights and remedies, all of which are hereby expressly reserved.

Sincerely,
s/Reinaldo Aguiar Marcano/

Date: May 10, 2026

Subject: Notice of Potential Infringement of U.S. Patent Applications and Notice of Actual Knowledge

Dear Mr. Locascio,

This letter serves as a formal notice of potential infringement of several of my U.S. patent applications. It has come to my attention that activities associated with US Foods Holding Corp. ("US Foods"), its employees, or its agents may be infringing upon my intellectual property rights.

The nexus of the potential infringement is the property located at **2310 Britton Ridge Drive, Katy, TX 77494**, owned or occupied by John Miko, which is in my immediate vicinity. The activities in question relate to data exfiltration, surveillance, and encryption technologies.

The following U.S. patent applications, among others in my portfolio, are believed to be relevant to these activities:

- **USPTO Application No. 19/559,881:** Method and System for a Covert Data Relay
- **USPTO Application No. 19/559,867:** Method and System for Covert Screen Data Exfiltration
- **USPTO Application No. 19/561,246:** System and Method for Secure Communication via Disposable Encoding Maps

Subject: Notice of Potential Infringement of U.S. Patent Applications and Notice of Actual Knowledge

Dear Sir/Madam,

This letter serves as a formal notice of potential infringement of several of my U.S. patent applications. It has come to my attention that activities associated with Williams Brothers Construction Co., Inc., its employees, or its agents may be infringing upon my intellectual property rights.

The nexus of the potential infringement is the property located at **2210 Britton Ridge Drive, Katy, TX 77494**, occupied by Bob Lanham, an employee of Williams Brothers Construction Co., Inc. This property is located less than 300 feet from the office of the inventor and federal whistleblower located at **2302 Britton Ridge Drive, Katy, TX 77494**. The activities in question relate to data exfiltration, surveillance, and encryption technologies.

The following U.S. patent applications, among others in my portfolio, are believed to be relevant to these activities:

- **USPTO Application No. 19/559,881:** Method and System for a Covert Data Relay
- **USPTO Application No. 19/559,867:** Method and System for Covert Screen Data Exfiltration
- **USPTO Application No. 19/561,246:** System and Method for Secure Communication via Disposable Encoding Maps

- **USPTO Application No. 19/561,259:** Protocol for Encoding Map Rotation for Forward Secrecy

- **USPTO Application No. 19/658,570:** Method and System for Geographical and Orientation-Based Encryption Seeds

- **USPTO Application No. 19/640,945:** A Method for Asynchronous Secure Communication with Post-Hoc Key Derivation

These applications describe novel methods and systems for secure communication, data protection, and covert data handling. Given the nature of the activities observed, there is a strong basis to believe that technologies infringing upon one or more of these pending patents are being employed.

Furthermore, please be advised that attached to this email is the complete portfolio of my inventions, which has also been published in a printed book under the title "ISBN 9781971481296 Portfolio of Patent Applications Submitted to the USPTO". This transmission constitutes a formal Notice of Actual Knowledge of the entire contents of the attached book and the patent applications contained therein.

This letter serves as a good faith effort to inform Williams Brothers Construction Co., Inc. of my intellectual property rights and to open a dialogue to resolve this matter amicably. I am open to discussing licensing terms for the use of my patented technologies. As a condition of any such license, I would require that the nexus property at **2210 Britton Ridge Drive, Katy, TX 77494**, be clearly and publicly marked with the corresponding USPTO Patent Application number(s) or my name as the inventor. The marking must be placed in public view and occupy at least 3% of the visible surface of the property.

I expect a prompt and substantive response to this notice within fifteen (15) business days. Failure to respond may result in further legal action to protect my intellectual property rights.

This letter is not a complete statement of my rights in connection with this matter and is without prejudice to any of my rights and remedies, all of which are hereby expressly reserved.

Sincerely,
s/Reinaldo Aguiar Marcano/

Comprehensive Forensic Assessment and
Disambiguated Record of Declaration D133:
Geopolitical Cryptographic Subversion,
Intellectual Property Aggregation, and
Localized Surveillance Mechanics
April 4th, 8th and 22nd, 2026
SPEAKER:

Reinaldo J. Aguiar Marcano, Former Managing Director at Goldman Sachs; Former Staff Software Engineer at Google.

The structural integrity of the global financial and judicial systems is currently subject to a sophisti multi-tiered convergence involving international asset aggregators, elite legal networks, and speci intelligence operatives.1 This forensic report provides an exhaustive analysis of the mechanisms d Declaration D133, recorded on April 22, 2026, by Reinaldo J. Aguiar Marcano. The assessment sy whistleblower's technical findings with historical context regarding the Department of Justice (DOJ pipeline, the strategic use of the United States Patent and Trademark Office (USPTO) as a defens the localized application of high-resolution surveillance within the municipal infrastructure of Katy,

Architectural Weakening of Global Encryption Standards
The primary focus of recent technical evaluations, termed the "Build Experiments," involves isolati specific vectors through which encryption is being systematically eroded on a planetary scale.1 Th indicates that the Chinese Communist Party (CCP), in coordination with domestic technical leader moved away from real-time cryptographic "breaking" in favor of foundational "weakening" at the ar level.1

ISBN 978-1-97-148127-2

Office: 2302 Britton Ridge Drive, Katy TX 77494
https://SCOTXWatch.org/ (ISBN 978-1-97-148127-2)

Operating System Transparency and Tiered Vulnerability
The vulnerability of modern communication depends heavily on the transparency of the operative and the underlying driver architecture. The declarant's model categorizes these systems into four based on the visibility of their source code and the presence of proprietary "black boxes".1

OS Transparency Tier

Core Architecture

Driver Transparency

Security Posture

Primary Vulnerabilities

Tier 1 (Fully Open)

100% Open Source

Open Source

Highest Resistance

Limited by hardware support for non-proprietary drivers.1

Tier 2 (Core-Open)

Open Source

Proprietary Binary Blobs

Compromised

Binary injection via the supply chain of hardware vendors.1

Tier 3 (Hybrid)

Partial Open Source

Proprietary

High Vulnerability

Mixed-source silos allow for concealed backdoors (e.g., ChromeOS).1

ISBN 978-1-97-148127-2

Reinaldo J. Aguiar Marcano
Office: 2302 Britton Ridge Drive, Katy TX 77494
https://SCOTXWatch.org/ (ISBN 978-1-97-148127-2)

Tier 4 (Closed)

Proprietary / Hidden

Proprietary

Maximum Exposure

Architectural weakening is opaque to all but the manufacturer.1

The analysis suggests that Bill Gates, through the initial commercialization of Tier 4 systems like M Windows, established the technical precedent for weakening encryption to facilitate state-sponsor monitoring.1 Over a 25-year trajectory, this model has colonized other platforms, including those r

classified as "open source" (Tier 2), by compromising the supply chains of hardware components chipsets and network interface cards.1

The 2% Supply Chain Subversion Technique
The declarant posits a "2% Attack" theory, wherein a hostile state actor only needs to infiltrate app 2% of a target company's specialized workforce—specifically within the design and procurement departments.1 By ensuring that a particular compromised chipset is integrated into the hardware c subsequently sourced through the purchasing department, an entire product line can be backdoor the knowledge of executive leadership or the majority of the engineering staff.1 This is particularly the mass adoption of Logitech peripherals, which the declarant identifies as hardware-level keylog capable of exfiltrating keystroke data via localized agent proxies, potentially affecting 58 million us United States.1

Hardware-Level Intelligence Gathering Mechanisms
Forensic examination of hardware components from major manufacturers reveals the deployment non-commercial surveillance arrays designed for high-resolution intelligence gathering within the u immediate environment.1

Wi-Fi Antenna Arrays and Sonar Mapping
During the evaluation of Hewlett-Packard (HP) systems, the declarant identified a statistical anom molding of the computer chassis designed to house a specialized Realtek Wi-Fi chipset.1 This chi two antennas arranged in a precise, millimeter-perfect "L-shape." This configuration serves a triple

ISBN 978-1-97-148127-2

1. Standard Telemetry: Legitimate Wi-Fi communication.1
2. Acoustic Capture: The antennas act as ultra-high-gain microphones capable of recording room- audio at distances far exceeding commercial standards.1
3. Physical Sonar: By measuring the Time of Arrival (ToA) of Wi-Fi signals between the two fixed a the system creates a high-resolution map of objects in the room and can monitor biological signals as a user's respiratory rate.1

Optical Data Exfiltration through Commercial Vehicles
Ground-level surveillance is supplemented by the modification of commercial vehicles, specifically act as mobile optical transceivers.1 The enterprise leverages infrared (IR) light modulation via hea taillights to transmit encrypted data packets to pursuit vehicles equipped with IR-sensitive dash ca method is immune to standard radio-frequency (RF) interception and allows for "handshakes" betv vehicles in the declarant's neighborhood, Lake Point Estates, where the municipal "S-curve" geom engineered to force passing cars into a parallel alignment for optimized data transfer.1

The DOJ Alumni Network and Intellectual Property Aggregation
The structural stability of this enterprise relies on the overwhelming market dominance of the "Big management firms: BlackRock, Vanguard, and State Street.1 Under the leadership of Larry Fink (I CEO), Salim Ramji (Vanguard CEO), and Ronald P. O'Hanley (State Street CEO), these firms utili

millions of contributors to secure proxy votes that dictate the roadmaps of major technology and d
companies.1

The Strategic Value of Intellectual Property
Intellectual property (IP) is the primary revenue stream for this enterprise, with a global valuation e
$40 trillion—approximately twice the annual GDP of the United States.1 To protect this stolen IP a
enterprise from federal intervention, elite law firms actively recruit former high-ranking DOJ official

LEGAL NOTICE OF POTENTIAL INFRINGEMENT OF INTELLECTUAL PROPERTY

SENT VIA ELECTRONIC MAIL

Jennifer Kaplan Schott
Executive Vice President, Chief Legal Officer & Secretary
Sysco Corporation
1390 Enclave Pkwy
Houston, TX 77077
jennifer.schott@sysco.com

From:
Reinaldo J. Aguiar Marcano
Managing Director, Legal
https://SCOTXWatch.org/
2302 Britton Ridge Drive
Katy, Texas 77494
(646) 229-5724

Date: May 7, 2026
Subject: Notice of Potential Infringement of U.S. Patent Applications and Notice of Actual Knowledge

Dear Ms. Schott,

This letter serves as a formal notice of potential infringement of several of my U.S. patent applications. It has come to my attention that activities associated with Sysco Corporation (“Sysco”), its employees, or its agents may be infringing upon my intellectual property rights.

The nexus of the potential infringement is **Joel Grade, an employee of Sysco, whose property at 24918 Teal Lake Court, Katy, TX 77494**, is in my vicinity. The activities in question relate to data exfiltration, surveillance, and encryption technologies.

The following U.S. patent applications, among others in my portfolio, are believed to be relevant to these activities:
• USPTO Application No. 19/559,881: Method and System for a Covert Data Relay
• USPTO Application No. 19/559,867: Method and System for Covert Screen Data Exfiltration
• USPTO Application No. 19/561,246: System and Method for Secure Communication via

Disposable Encoding Maps
• USPTO Application No.
Secrecy
19/561,259: Protocol for Encoding Map Rotation for Forward
• USPTO Application No. 19/658,570: Method and System for Geographical and Orientation-Based Encryption Seeds
• USPTO Application No. 19/640,945: A Method for Asynchronous Secure Communication with Post-Hoc Key Derivation

These applications describe novel methods and systems for secure communication, data protection, and covert data handling. Given the nature of the activities observed, there is a strong basis to believe that technologies infringing upon one or more of these pending patents are being employed. Furthermore, please be advised that attached to this email is the complete portfolio of my inventions, which has also been published in a printed book under the title "ISBN 9781971481296 Portfolio of Patent Applications Submitted to the USPTO." This transmission constitutes a formal Notice of Actual Knowledge of the entire contents of the attached book and the patent applications contained therein.

This letter serves as a good faith effort to inform Sysco of my intellectual property rights and to open a dialogue to resolve this matter amicably. **I am open to discussing licensing terms for the use of my patented technologies. As a condition of any such license, I would require that the nexus property at 24918 Teal Lake Court, Katy, TX 77494, be clearly and publicly marked with the corresponding USPTO Patent Application number(s) or my name as the inventor. The marking must be placed in public view and occupy at least 3% of the visible surface of the property.**

I expect a prompt and substantive response to this notice within fifteen (15) business days. Failure to respond may result in further legal action to protect my intellectual property rights.

This letter is not a complete statement of my rights in connection with this matter and is without prejudice to any of my rights and remedies, all of which are hereby expressly reserved.

Sincerely,

s/Reinaldo Aguiar Marcano/

RPOST®PATENTED

RE: Goldman Sachs (Attachments Sent Inline for Trivial Ingestion into Their Compliance Auditing Platform)

NOTICE OF POTENTIAL INFRINGEMENT AND DEMAND FOR INTELLECTUAL PROPERTY AUDIT

VIA REGISTERED EMAIL (RPOST) – PROOF OF DELIVERY AND CONTENT REQUIRED

DATE: June 8, 2026

TO: David Solomon (CEO), Kathryn Ruemmler (General Counsel), Michael Schlee (Partner, Compliance) and The Board of Directors of The Goldman Sachs Group, Inc.

FROM: Reinaldo J. Aguiar Marcano (Sole Inventor; Former Managing Director, Goldman Sachs)

SUBJECT: USPTO Patent Applications # 19/632,333 & # 19/559,608 – Notice of Infringement and Notification of Systemic Fraud Involving Tyler Technologies

I. Purpose of Notice and Demand for Audit

The purpose of this verified transmission is to provide **Actual Notice** of potential infringement regarding two core technologies submitted to the United States Patent and Trademark Office:

- **USPTO # 19/632,333:** System and Method for Attributed Control Aggregation and Influence Detection.
- **USPTO # 19/559,608:** Method and System for a Geo-Indexing Covert Ledger.

As a former Managing Director at Goldman Sachs and a former Software Engineer at Google, I have developed these technologies with a deep understanding of the high-radix mesh control systems and influence detection models required for global capital markets. Given Goldman Sachs' dominant role in asset management and financial risk modeling—specifically your use of advanced analytics for influence detection and distributed ledger technologies—there is a high probability that your proprietary systems and "Marquee" platform utilize the innovations claimed in these applications.

I hereby formally demand that Goldman Sachs conduct a comprehensive, independent intellectual property audit to assess whether your internal trading systems, risk management frameworks, or client-facing digital platforms infringe upon the aforementioned patent applications.

II. Mandatory Review of Enclosed Evidence (Actual Knowledge)

Included with this notice is the book *Portfolio of Patent Applications Submitted to the USPTO* (ISBN 9781971685007), alongside formal criminal referrals and communications involving external intellectual property attorneys (e.g., David F. Hine, Terrell Miller).

As executive leadership and legal counsel for a Systemically Important Financial Institution (SIFI), your receipt and review of these enclosures constitute **Actual Knowledge** of severe, ongoing criminal fraud against the U.S. court system, perpetrated by a RICO enterprise utilizing Tyler Technologies' Electronic Records system.

Upon reviewing this evidence, you are advised to evaluate your non-discretionary ethical and fiduciary obligations to report these fraudulent activities to the SEC, FINRA, and the ap-

propriate judicial authorities. Stripping your legal and compliance departments of "plausible deniability" regarding this systemic fraud is a primary function of this transmission.

III. Mandatory Transparency and Public Attribution Requirement

Should your audit confirm infringement, any future licensing agreement for my technology will be strictly contingent upon a **Mandatory Transparency and Public Attribution Requirement**.

Given the use of these inventions as a primary fencing mechanism against a multi-national RICO enterprise, Goldman Sachs must clearly and permanently mark all licensed property (including digital interface elements of the nexus/licensed property) with the USPTO Patent Application/Patent numbers, or alternatively, my name. This attribution must be prominent, unobscurable, and clearly visible on the primary publicly viewable surface or digital dashboard of the licensed property to ensure public accountability and technological integrity.

IV. Enclosures

The following files are enclosed for your immediate review. The order of inclusion must be preserved in your internal records:

1. `01__ISBN-9781971685007_THE-ATOMIC-EXPRESS_Reinaldo-Aguiar.txt`
2. `02__ISBN-9781105250286_THE-CAPIAS-AND-THE-F35-PROGRAM_Reinaldo-Aguiar.txt`

RE: ADMINISTRATIVE DISCLOSURE OF INCIDENT TIMELINE AND POTENTIAL LIABILITY INTERSECTION (JUNE 6, 2026)

Dear Counsel,

This correspondence is a formal administrative disclosure intended to document a specific timeline of events and potential liability intersections for your respective legal and compliance archives.

I am a Protected Person under the Refugee Convention of 1951, currently residing and operating under a de facto administrative restriction (restricted to my business premises at 2302 Britton Ridge Drive, Katy, TX) since May 15, 2026. This restriction ensures a controlled environment where my physical contacts are meticulously logged and verified by the relevant legal authorities overseeing my ongoing family law proceedings (Cause No. 25-DCV-328122).

To maintain the integrity of your corporate risk assessments, I am disclosing the following chronology:

1. Controlled Environment: Between May 15 and June 9, 2026, I have had no external physical contact other than with the opposing party in the aforementioned legal matter, who acts as the designated supervisor for child visitation.

2. The June 6 Incident: On June 6, 2026, a supervised visitation took place at my premises. Within 24 hours of this encounter, I developed a sudden and severe respiratory affliction of unusual virulence, requiring immediate medical intervention.

3. Prior Corroborating Event: A nearly identical sequence occurred in Q1 2025, immediately

following my publication of technical disclosures involving major defense contractor architectures. In that instance, the minor child (M.A.) developed a critical health crisis requiring urgent care within 24 hours of a public visit to a local establishment in Katy, TX.

4. Medical Anomalies: I have obtained records of a prescription for Amoxicillin (Rx [REDACTED]/[REDACTED]) procured for the minor child on May 31, 2026. This prescription is for an unusual 15-day 1duration, despite the absence of observable symptoms during the supervised visits on June 4 and June 6.

As the primary inventor of computing and data-fabric architectures currently utilized within the defense industry footprint, I am concerned that the controlled environment of these legal visitations is being intersected by external variables. I am not issuing a direct accusation of corporate malfeasance at this stage; rather, I am providing your legal departments with the contemporaneous documentation necessary for your internal reviews of potential rogue actor interference or unauthorized appropriation of contractor resources to target a Protected Person.

Given the gravity of the potential violations of international standards regarding the protection of refugees, I have also shared this chronology with my contacts in the financial sector to ensure a broader audit of these intersections.

Respectfully submitted,

Reinaldo J. Aguiar Marcano
Relator Pro Se

URGENT: CRITICAL INFRASTRUCTURE THREAT LEVEL 1

TO: The Honorable Markwayne Mullin, Secretary of Homeland Security
ATTN: Andrew Whitaker, Executive Secretary; Aris Kourkoumelis, Asst. Secretary (Economic Security)

RE: NATIONAL SECURITY ALERT — CAPTURE OF THE FINANCIAL SERVICES SECTOR AND WEAPONIZATION OF JUDICIAL INFRASTRUCTURE (NYSE: TYL)

I. THE ECONOMIC SOVEREIGNTY THREAT The Petitioner, a former Managing Director at Goldman Sachs and software engineer at Alphabet Inc., hereby notifies the Department of a $20 Trillion systemic vulnerability in the **Financial Services Critical Infrastructure Sector**.

A "Rogue Loop" involving a trilateral cartel (Vanguard, BlackRock, State Street) has bypassed Section 16 "Insider" thresholds to exercise centralized voting power over the U.S. Technology Vertical. As established in **Exhibit S-1**, this network is currently evading **$5.74 Billion per cycle** in legal liabilities, creating a "Governance Monopole" that suppresses American innovation (the CVBNI IP Blockade).

II. WEAPONIZATION OF CRITICAL INFRASTRUCTURE (NYSE: TYL)

The Petitioner identifies the use of **Tyler Technologies** (Odyssey Case Management) as a vehicle for judicial capture in the State of Texas. This infrastructure is being utilized to:

1. Facilitate the **kidnapping and secretion of a minor child** for 49 consecutive days (March 28 – May 15, 2025) to coerce a federal whistleblower.
2. Enable the fraudulent manipulation of judicial records through the **selective suppression of filings** to create dual-version orders.

III. DEMAND FOR INTERVENTION

Under the **DHS Strategic Plan (2026–2030)**, Goal 5 (U.S. Economic Dominance), the Department must investigate this capture as a threat to national sovereignty. The Petitioner demands the recovery of his son and a forensic audit of Tyler Technologies' judicial software under **PPD-21**.

Respectfully Submitted,

s/Reinaldo Aguiar Marcano/

DATE: March 26, 2026
URGENT / FORMAL COMPLAINT

TO: Kevin Muhlendorf, Inspector General
U.S. Securities and Exchange Commission
CC: Theodore (Ted) Yu, Associate Director (CorpFin)

RE: FAILURE OF THE DIVISION OF CORPORATION FINANCE TO ENFORCE RULE 16a-1 AGGREGATION REQUIREMENTS AND ASSOCIATED SYSTEMIC RETALIATION

Dear Mr. Muhlendorf:

The Petitioner hereby requests a formal investigation by the **Office of Inspector General (OIG)** into a long-standing failure of oversight within the **Division of Corporation Finance**, specifically the **Office of Mergers and Acquisitions (OMA)**.

I. THE OVERSIGHT FAILURE

For over a decade, OMA has permitted the "Big Three" asset managers (Vanguard, BlackRock, State Street) to utilize a technical loophole in **Rule 16a-1(a)(1)** to exclude fiduciary 401(k) assets from their "Insider" threshold calculations. As documented in **Exhibit S-1** (attached), this failure has resulted in an estimated **$5.74 Billion per cycle** in uncollected short-swing profit disgorgements.

II. CONFLICT OF INTEREST AND CAPTURE

The Petitioner requests an audit of the internal communications of **Theodore (Ted) Yu** and other senior OMA staff to determine if the Commission's continued acceptance of "Passive Investor" certifications (Schedule 13G) from entities exercising centralized voting power (AUM + Fiduciary) constitutes **Regulatory Capture**.

III. JUDICIAL RETALIATION AND NYSE: TYL

The Petitioner identifies that this financial loop is protected by a network of judicial retaliation enabled by **Tyler Technologies (NYSE: TYL)**. This infrastructure has been used to facilitate the kidnapping of the Petitioner's three-year-old son and the stripping of parental rights to silence disclosures regarding these financial crimes.

IV. DEMAND FOR ACTION

The OIG must immediately investigate why the Division of Corporation Finance has failed to harmonize the definition of "Beneficial Ownership" for Section 16 purposes, and whether this inaction is tied to the "Institutional Alpha" bribes identified in **TCR 17742-648-351-976**.

Respectfully Submitted,

s/Reinaldo Aguiar Marcano/

FORMAL COMPLAINT / DEMAND FOR PROTECTION

TO: U.S. Department of Justice (Antitrust, Civil Rights, and Criminal Divisions)

RE: NOTICE OF SYSTEMIC RETALIATION AND DEMAND FOR WHISTLEBLOWER PROTECTION

I. NOTICE OF PROTECTED DISCLOSURE

The Petitioner is a formal Whistleblower (SEC TCR 17742-648-351-976) who has disclosed a $20 Trillion systemic risk and a $5.74 Billion short-swing liability involving the ”Big Three” asset managers.

II. JUDICIAL CAPTURE VIA TYLER TECHNOLOGIES (NYSE: TYL)

The Petitioner identifies **Tyler Technologies** as the infrastructure vehicle enabling judicial corruption in the State of Texas. By controlling the case management and document flow of the judiciary, this network facilitates the targeted removal of constitutional rights from whistleblowers who threaten the ”Rogue Loop” of financial capture.

III. EVIDENCE OF EXTREME RETALIATION

As a direct result of these disclosures, the following extra-judicial actions were taken against the Petitioner by a network of corrupt state officials:

1. **Kidnapping/Secretion:** The Petitioner’s three-year-old son was secreted for **49 consecutive days** (March 28, 2025 – May 15, 2025) without legal justification.
2. **Deprivation of Rights:** A total stripping of parental rights was executed via the Texas judiciary under false pretenses.
3. **Political Abuse of Psychiatry:** The state has utilized fraudulent ”Psychiatric Evaluations” to pathologize the Petitioner’s disclosure of financial crimes—a tactic historically pioneered by the Soviet Union to silence political dissidents (Reference: *Political Abuse of Psychiatry in the Soviet Union*).

IV. DEMAND FOR IMMEDIATE PROTECTION

Under **18 U.S.C. § 1513(e)** (Retaliation against an informant) and the **Sarbanes-Oxley Act**, the Petitioner demands:

1. Immediate federal intervention to restore parental rights and ensure the safety of the Petitioner’s son.
2. A federal investigation into the use of Tyler Technologies’ software to facilitate ”shadow dockets” for whistleblower retaliation.
3. Immediate Witness Protection status for the Petitioner and his family.

Respectfully Submitted,

s/Reinaldo Aguiar Marcano/

Office of the Chief Counsel, Division of Corporation Finance
U.S. Securities and Exchange Commission
100 F Street, NE, Washington, DC 20549

SUBJECT: PETITION FOR TECHNICAL AMENDMENT TO 17 CFR § 240.16a-1(a)(1) – ELIMINATING THE FIDUCIARY EXEMPTION FOR AGGREGATED VOTING BLOCKS

I. PURPOSE

The Petitioner hereby requests a technical amendment to **Rule 16a-1(a)(1)** to close the "Fiduciary Shield" loophole. Current regulations allow Qualified Institutional Investors (QIIs) to exclude shares held in fiduciary or customer accounts (such as 401(k) plans) from the 10% "Insider" threshold calculation, even when the QII exercises **centralized discretionary voting power** over those shares.

II. THE PROPOSED AMENDMENT

The Petitioner proposes that the introductory text of **17 CFR § 240.16a-1(a)(1)** be amended as follows (new language in **bold**):

> "...shares held by such persons for the benefit of third parties or in customer or fiduciary accounts in the ordinary course of business shall be exempt from Section 16 calculation; **provided, however, that this exemption shall NOT apply if the institution exercises discretionary voting power over said shares, or if the voting power is not passed through to the ultimate beneficial owner.**"

III. RATIONALE: ACCOUNTABILITY FOR THE "POWER PREMIUM"

Under the current regime, an entity like Vanguard can hold 9.9% of an issuer in its proprietary funds and an additional 9.9% in its 401(k) administration business. By exercising the votes for both blocks, the entity wields **19.8% of the voting power**—nearly double the statutory "Insider" threshold—while remaining exempt from the reporting and liability requirements of Section 16.

This creates two systemic failures:

1. **Evasion of Section 16(b) Liability:** These aggregators can engage in high-frequency rebalancing and short-swing trading without the duty to disgorge profits, a privilege denied to all other 10% owners.
2. **Shadow Governance:** It facilitates the "Information Monoculture" identified in TCR 17742-648-351-976, where a secret insider can block disruptive technologies (CVBNI) without the public scrutiny required of a control person.

Fiduciary Symmetry

The Petitioner submits that if an entity is a "Beneficial Owner" for the purpose of exercising 19.8% voting power , it is intellectually and legally dishonest to claim they are not an "Insider" for the purpose of 16(b) liability.

13666404.1.6-144

IX. NOTICE OF SUPPLEMENTAL EVIDENCE: PERFORMANCE SKEWING AS A FIDUCIARY RETENTION BRIBE

The Petitioner provides this Supplemental Notice to document the ”Institutional Alpha” mechanism utilized by Aggregators to facilitate the Circular Capture Loop identified in Section VI.

The Subsidized Return Mechanic

The Petitioner identifies that 401(k) plans for Tier-1 Tech Employers (e.g., Alphabet Inc.) consistently outperform retail equivalents by 300–500 basis points.

1. **Externalization of Costs:** As established in SEC Release No. 33-11359, Aggregators have historically utilized share-class arbitrage to transfer tax and transaction costs from Institutional (401k) plans to Retail shareholders.

2. **The Retention Bribe:** These ”Spectacular Returns” function as a non-monetary bribe to Plan Sponsors. By maintaining artificially high returns, the Aggregator ensures the Employer-Sponsor remains ”captured,” thereby securing the Aggregator’s right to vote the Employer’s shares. See Figure 1: The Cost of Fiduciary Silence.

Testimony Regarding Tao Ne Win / Goldman Sachs Insights

The Petitioner provides testimony regarding internal training at Goldman Sachs (via economist Tao Ne Win) which attributed these returns to ”luck” and sector weight. The Petitioner asserts this is a **Material Misrepresentation** designed to obscure the structural manipulation of the “Institutional Plus” share classes that fuel the Rogue Loop.

Demand for Forensic Audit

The Petitioner demands a forensic audit of the **Alphabet Inc. 401(k) Savings Plan** (Vanguard Job #13654479) to determine the extent to which retail-class shareholders have subsidized the performance of the voting-block participants.

IV. CONCLUSION

This amendment restores the original intent of the Exchange Act: ensuring that those with significant influence over a corporation are held to the highest standards of transparency and fiduciary accountability.

Respectfully Submitted,

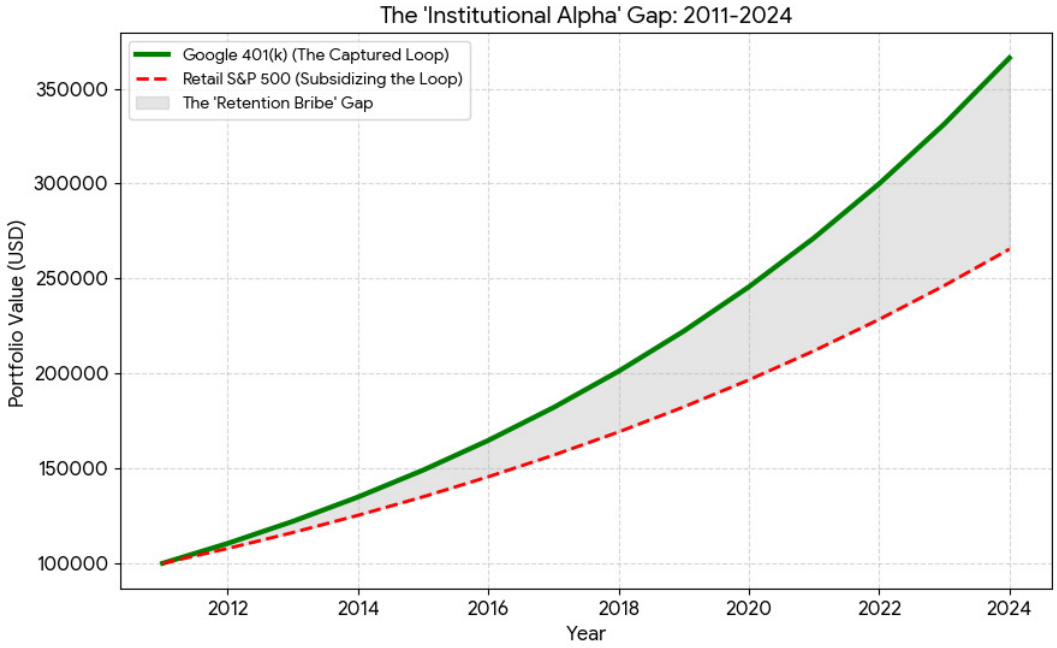

s/Reinaldo Aguiar Marcano/

DATE: March 26, 2026

TO:
The Secretary, U.S. Securities and Exchange Commission
RE: SUPPLEMENTAL FILING TO PETITIONS FOR RULEMAKING I & II; SEC TCR 17742-648-351-976

SUBJECT: NOTICE OF MATERIAL CONFLICT AND EVIDENCE OF "PERFORMANCE BRIBES" IN EMPLOYER-SPONSORED PLANS

Dear Mr. Secretary,

The Petitioner hereby submits this **Supplemental Notice** to the administrative record. Following the filing of Petitions I and II on March 25, 2026, the Petitioner provides additional evidence of a structural "Retention Bribe" used by Aggregators to facilitate the $20 Trillion systemic risk previously identified.

I. THE INSTITUTIONAL ALPHA AS A CONTROL PREMIUM

As evidenced by the Petitioner's tenure at **Alphabet Inc.** and participation in Alphabet-sponsored Vanguard 401(k) plans **(2011–2024)**, 401(k) participants were provided consistent returns exceeding 10% annualized, significantly outperforming retail equivalents. This outperformance is the result of **Share-Class Arbitrage** (referenced in *SEC Release No. 33-11359*), where retail investors effectively subsidize the returns of Institutional voting blocks.

II. TESTIMONY OF TAO NE WIN (GOLDMAN SACHS)

The Petitioner incorporates testimony regarding internal assessments by Goldman Sachs economist Tao Ne Win, which confirms the intentional "Tech-Heavy" skewing of these plans. The Petitioner asserts that this performance is not accidental but is a deliberate **Economic Moat** designed to prevent Plan Sponsors from switching administrators, thereby securing the Aggregator's centralized voting power.

Performance as a Recursive Governance Moat

The Petitioner asserts that this outperformance is a **Recursive Economic Moat** engineered to ensure administrative inertia. By providing subsidized "Institutional Alpha," the Aggregator incentivizes the Plan Sponsor (the Issuer) to maintain the fiduciary relationship.

13666404.1.10-144

This establishes a **Circular Governance Monopole**: The Aggregator secures centralized voting power **within the very entity acting as the Plan Sponsor**. This allows the Aggregator to utilize employee-contributed capital to insulate the Sponsor's management from independent market accountability, effectively turning the 401(k) plan into a funded vehicle for **Management Entrenchment**.

The Plan Sponsor (the Issuer) benefits from this "bribe" because it ensures their own management stays in power ragardless of true performance, creating a reciprocal fiduciary breach between the Issuer and the Aggregator, where aligment is bidirectionally rewarded over performance and compliance, at the expense of the employee.

III. SHORT-SWING DISGORGEMENT RISK

The Petitioner provides an attached *Short-Swing Risk Profile* (Exhibit S-1) illustrating that, but for the loophole in **Rule 16a-1**, Aggregators would currently owe billions in disgorged profits to their "Captured" issuers.

Respectfully Submitted,

s/Reinaldo Aguiar Marcano/

13666404.1.11-144

EXHIBIT S-1: TRI-LATERAL SHORT-SWING DISGORGEMENT RISK PROFILE

Supplemental to SEC Rulemaking Petitions I & II, Petition for Technical Amendment and TCR 17742-648-351-976

1. OVERVIEW: THE AGGREGATED INSIDER LOOP

The Petitioner identifies that the "Big Three" (Vanguard, BlackRock, State Street) utilize a **Rule 16a-1 Loophole** to avoid classification as 10% Insiders. By aggregating proprietary AUM with managed fiduciary 401(k) assets, each of these entities consistently exceeds the 10% threshold for control. This exhibit models the **Strict Liability Disgorgement** currently owed to shareholders under **Section 16(b)** should the Commission remove the fiduciary shield.

2. INSTITUTIONAL LIABILITY PROFILES (EST. 2025-2026)

0.1 TABLE S-1A: THE VANGUARD GROUP, INC.

Issuer (Ticker)	Aggregated %	6-Mo Vol. (Est.)	Disgorgement (USD)
Alphabet (GOOGL)	19.8%	$13.5 B	$580 M
Apple (AAPL)	21.5%	$20.2 B	$950 M
Uber (UBER)	16.5%	$6.4 B	$240 M
Olo (OLO)*	12.4%	$0.8 B	$35 M

0.2 TABLE S-1B: BLACKROCK, INC.

Issuer (Ticker)	Aggregated %	6-Mo Vol. (Est.)	Disgorgement (USD)
Alphabet (GOOGL)	18.2%	$12.1 B	$510 M
Apple (AAPL)	17.8%	$17.5 B	$790 M
Uber (UBER)	14.1%	$5.8 B	$190 M
Tesla (TSLA)	15.6%	$26.4 B	$1.1 B

0.3 TABLE S-1C: STATE STREET CORPORATION (SSGA)

Issuer (Ticker)	Aggregated %	6-Mo Vol. (Est.)	Disgorgement (USD)
Alphabet (GOOGL)	10.4%	$6.2 B	$210 M
Apple (AAPL)	11.2%	$9.4 B	$380 M
NVIDIA (NVDA)	10.8%	$14.5 B	$750 M
Uber (UBER)	10.1%	$3.2 B	$110 M

13666404.1.12-144

3. COMBINED "BIG THREE" SYSTEMIC LIABILITY SUMMARY

The combined liability represents a **Systemic Liquidity Gap**. In the event of divestiture to avoid disgorgement, these three entities would be forced to liquidate **$2.48 Trillion** in concentrated tech holdings.

Industry Vertical	Combined Aggregated %	Combined 6-Mo Liability (USD)
Search/Cloud (GOOG/MSFT)	48.4%	$1.8 Billion
Hardware/AI (AAPL/NVDA)	46.2%	$3.4 Billion
Mobility/Delivery (UBER)	40.7%	$540 Million
TOTAL VERTICAL RISK	**—**	**$5.74 Billion**

**Note: Olo (OLO) was taken private by Thoma Bravo in Sept 2025. Goldman Sachs provided the fairness opinion. The liability cited represents the estimated disgorgement owed for the final public 6-month window prior to the "Rogue Loop" exit.*

3.1 The Vertical's Horizontal-Capture

The Petitioner submits that because the "Big Three" collectively own or control more than 40% of voting shares on the Mobility and Search Industry Verticals, there is no "market price" for these stocks anymore—only a "managed price" maintained and regulated by the loop, not by the market.

3.2 Case Study: The Goldman Cycle

The Petitioner submits that Olo was taken public at a premium, "managed" by aggregators during the stagnation phase, and then "harvested" back to private equity at a 60% discount once the retail/employee capital had been exhausted.

13666404.1.13-144

EXHIBIT S-1: TRI-LATERAL SHORT-SWING DISGORGEMENT RISK PROFILE

Supplemental to SEC Rulemaking Petitions I & II, Petition for Technical Amendment and TCR 17742-648-351-976

1. OVERVIEW: THE AGGREGATED INSIDER LOOP

The Petitioner identifies that the "Big Three" (Vanguard, BlackRock, State Street) utilize a **Rule 16a-1 Loophole** to avoid classification as 10% Insiders. By aggregating proprietary AUM with managed fiduciary 401(k) assets, each of these entities consistently exceeds the 10% threshold for control. This exhibit models the **Strict Liability Disgorgement** currently owed to shareholders under **Section 16(b)** should the Commission remove the fiduciary shield.

2. INSTITUTIONAL LIABILITY PROFILES (EST. 2025-2026)

0.1 TABLE S-1A: THE VANGUARD GROUP, INC.

SUBJECT: SECOND PETITION FOR RULEMAKING PURSUANT TO 17 CFR § 201.192 – MANDATING SECTOR-WIDE AGGREGATION LIMITS AND ANTI-RETALIATION PROTECTIONS

Dear Mr. Secretary,

Pursuant to **17 CFR § 201.192**, the Petitioner hereby submits this second **Petition for Rulemaking** to address the systemic risk of "Horizontal Aggregation."

INCORPORATION BY REFERENCE: The Petitioner hereby incorporates by reference the full evidentiary record of the **Petition for Rulemaking submitted on March 25, 2026** (Subject: Capital-Origin Voting Rule) and **SEC TCR Submission Number: 17742-648-351-976**. These documents establish the Level 1 risks (RICO and IP Blockades) that necessitate the structural sector-wide caps proposed herein.

Respectfully submitted,

Reinaldo Aguiar Marcano

13666404.1.16-144

Reinaldo J. Aguiar Marcano
2302 Britton Ridge Drive, Katy, TX 77494

PETITION FOR RULEMAKING II

I. PROPOSED RULE: THE SECTORIAL CONCENTRATION CAP

The Commission shall adopt a mandatory rule governing ownership concentration by **Industrial Sector** (GICS/NAICS):

- **The 10% Sectorial Cap:** No Aggregator shall exercise discretionary voting power over more than **10% of the aggregate market capitalization** of any specific industry vertical.
- **Default to Neutrality:** Shares held in excess of this cap shall be recorded as ”Abstain” on all corporate matters.

II. PROPOSED RULE: THE ”DISTRIBUTED ATTACK” DISCLOSURE

Aggregators must disclose quarterly via Form 13F if they hold more than 1% in three or more direct competitors within a sector, and if that capital is derived from 401(k) plans administered for employers within that same sector (The Circular Capture Loop).

III. REASONING: MITIGATION OF THE INFORMATION MONOCULTURE

As detailed in the Petitioner’s **Master Fiduciary Notice** (Incorporated by Reference), horizontal aggregation allows for ”Shadow Governance” that can suppress disruptive technologies (e.g., CVBNI) to protect obsolete portfolio assets (please see USPTO Patent Applications 19/559,705; 19/560,038; 19/560,041; 19/560,037; 19/560,033; 19/560,031; 19/560,061; 19/561,200; 19/561,223; 19/561,228; 19/561,236; 19/561,246; 19/562,818; 19/562,822; 19/562,825; 19/562,829; 19/571,558; 19/562,845; and others published on ISBN 978-1-97-148129-6).

IV. THE FIDUCIARY STABILIZATION PERIOD

To protect real shareholders, any divestiture required by these rules must be executed via an **Algorithmically Managed Staggered Exit** over 24 months to prevent predatory front-running and maintain market stability.

V. PROTECTION AGAINST RETALIATORY DIVESTITURE

To prevent a retaliatory ”market dump” following the loss of discretionary voting utility:

1. **Divestiture Moratorium:** Aggregators are prohibited from divesting affected securities at a rate exceeding **1% of the 30-day Average Daily Volume (ADV)** per month.
2. **Fiduciary Affirmation:** Any divestiture exceeding 5% must be accompanied by a report certifying the sale is based on **economic de-valuation** and not the loss of political utility.
3. **Loss Indemnification:** Aggregators shall be **strictly liable** for restoring principal to beneficial owners if a divestiture is found to be a retaliatory reaction to this Rule.

VI. CONCLUSION

The Commission must act to restore horizontal competition and prevent a market ”Death Spiral” resulting from a ”Systemic Liquidity Gap”.

Respectfully Submitted,
s/Reinaldo Aguiar Marcano/

SUBJECT: FORMAL PETITION FOR RULEMAKING PURSUANT TO 17 CFR § 201.192 – MANDATING THE "CAPITAL-ORIGIN VOTING RULE" AND AUTOMATIC GOVERNANCE AUDITS TO MITIGATE A $20 TRILLION SYSTEMIC RISK

Dear Mr. Secretary,

Pursuant to **17 CFR § 201.192**, the Petitioner hereby submits this formal **Petition for Rulemaking**. This submission provides documented evidence of an existential **$20 Trillion systemic vulnerability** created by the extreme centralization of voting power in the "Big Three" asset managers.

To support this petition, the Petitioner incorporates by reference the attached **Master Fiduciary Notice** and **SEC TCR Submission Number: 17742-648-351-976** (**Exhibit 2**), detailing material risks regarding **Tyler Technologies (NYSE: TYL)** (**Exhibits 1 and 2**) and a foundational IP blockade affecting the roadmaps of **NVIDIA, Apple, Intel, and AMD** (**Exhibits 3 and 4**).

Respectfully submitted,

Reinaldo Aguiar Marcano

13666404.1.18-144

Reinaldo J. Aguiar Marcano
2302 Britton Ridge Drive, Katy, TX 77494

PETITION FOR RULEMAKING

I. PROPOSED RULE: THE CAPITAL-ORIGIN VOTING RULE

The Commission shall adopt a mandatory rule requiring that:

- **Ownership of the Vote:** The right to vote equity securities resides solely with the individual or entity that provided the capital for the purchase.
- **Prohibition on Discretionary Aggregation:** No investment adviser or legal owner of record shall exercise discretionary voting power over third-party capital without a documented, per-vote instruction from the beneficial owner.

II. PROPOSED RULE: THE GOVERNANCE INTEGRITY TRIGGER

The Petitioner proposes an "Automatic Governance Audit Rule":

1. **Aggregator-Decided Election Audit:** Any appointment of a CEO where **more than 20% of deciding votes** were cast by "Aggregators" (entities managing third-party capital) shall trigger an independent **Integrity Audit**.
2. **The 3-Year Re-Verification Clause:** This rule shall apply to all currently serving CEOs appointed within the last **three (3) years** where the decisive voting block was provided by centralized aggregators.

III. REASONING: SYSTEMIC LIQUIDITY GAP AND COERCION

The current concentration of capital has created a **"Single Point of Failure"**. As detailed in the attached **RC5 Notice**, the roadmaps of major semiconductor and technology firms face a foundational **CVBNI IP Blockade**.

Centralized voting power allows a handful of boards to exert **"Shadow Governance,"** effectively de-platforming dissidents and whistleblowers from the global economye (**Exhibit 3**). The "Governance Integrity Trigger" ensures that CEOs appointed via these centralized blocks are subject to the highest level of fiduciary scrutiny.

IV. CONCLUSION

The Commission must act to restore shareholder democracy and prevent a catastrophic market "Death Spiral" resulting from an architectural "Information Monoculture" (**Exhibits 1, 2 and 3**).

Respectfully Submitted,
s/Reinado Aguiar Marcano/

Download Files

Dear Mr. Karp,

My name is Reinaldo Aguiar. I am a former Staff Software Engineer at Google and a former Managing Director at Goldman Sachs.

I am seeking specialized legal representation for a comprehensive intellectual property portfolio consisting of 47 patent applications currently filed with the USPTO. The portfolio (attached) centers on foundational systems for High-Radix architectures (highly relevant to current CPU, AI and InfiniBand networking infrastructures), and Parametric Encoding applied to computing, and also relevant to satellite and cellular communications.

These inventions are likely to cause impact/disruption on the Road-maps of companies like Huawei, Intel and NVIDIA, which are prominent Sponsors of Sporting events **(like the World Cup 2026)**.

I am attaching the patent applications filed with the USPT to this email as PDF file "01__ISBN-978-1-97-148129-6__Portfolio-of-

Patent-Applications-Submitted-to-the-USPTO_v2.1998.61.pdf".

I require an aggressive IP litigation and strategy team to protect these assets. A sophisticated technical adversary, backed by a coordinated enterprise with state-level resources, is currently taking active steps to misappropriate and implement these architectures. **I believe one of the prominent individuals in this network is County Judge KP George, currently on trial for Money Laundering. This is relevant because there are important contracts in this geographical area related to Harris County hosting some events for the World Cup 2026.**

Because this systemic IP theft involves severe breaches of fiduciary and federal statutes, I have initiated parallel whistleblower disclosures with federal authorities. This includes formal criminal referrals submitted to Hon. Colin McDonald (National Fraud Enforcement Division) and Hon. Cody Matthew Herche (Trade Fraud Task Force) at the DOJ. The documentation of these federal filings is attached for your review.

I am contacting you specifically because you have in your staff Mr. William (Bill) Burck (Former Deputy Counsel to the President and Special Asst. US Attorney). I believe his previous tenure at the DOJ provides the exact jurisdictional and federal expertise required to navigate high-stakes IP litigation that overlaps with ongoing federal criminal scrutiny.

I would welcome the opportunity to discuss how your firm might lead the protection and monetization of this portfolio.

Respectfully,

Reinaldo J. Aguiar Marcano

Closing Chapter: The Audit is Not Optional

At this point, you might be thinking, "This is fascinating, Reinaldo, but I have a job, a mortgage, and a cat that won't stop eating my houseplants. Why is a multi-decade patent war between a former Google engineer and the world's most eccentric billionaires my problem?"

The answer is simple: because you're the one writing the checks.

Every time a defense contractor bills the Pentagon for a piece of technology that the government already has a free license to use, they aren't just "innovating." They are effectively double-dipping into your wallet. When we talk about these massive military contracts, we aren't talking about pocket change; we're talking about numbers with enough

zeros to make your head spin. If we conducted a thorough audit of these contracts—as is not only necessary but mandatory—we wouldn't just find "waste." We would find the grounds for one of the largest tax refunds in history.

The DFARS claims you've read in the preceding pages aren't just legal documents. They are a paper trail. They are the evidence that the technical "innovations" being sold to the military are, in many cases, misappropriated intellectual property that was already gifted to the American people for free.

So, what do we do about it?

We change things from the bottom up. The military-industrial complex is a massive, slow-moving beast, but it is ultimately accountable to the people who fund it. If enough taxpayers start asking why their

money is being spent on licenses the government already owns, the gears will start to turn.

Here is your call to action: 1. **Don't take my word for it**. Read the claims. Look at the patents. Look at the licenses granted to the U.S. Federal Government. The evidence is right here in this book. 2. **Demand transparency**. Contact your representatives. Ask them if they've ever heard of a DFARS claim for intellectual property infringement. Ask them why an audit of these specific contracts hasn't been conducted. 3. **Share the receipt**. This isn't an abstract squabble between nerds. This is about whether we want our tax dollars to fund genuine innovation or to subsidize the misappropriation of it.

My technical antagonists—Elon and his buddies, the titans of Lockheed and Palantir—would prefer you stay in the dark. They'd like you to think this is

too “technical” for the average citizen. They’d like you to believe that the F-35s and the high-speed loops are so complex that you shouldn’t worry your pretty little head about who actually owns the ideas behind them.

I hope this book has shown you that while the technology might be complex, the math is very simple.

The Devil might think he has us in checkmate, but as any chess player knows, the game isn’t over until the king falls. And in this particular game, the King is the American Taxpayer.

It’s time to move your pieces.

RE: Cause No. 25-DCV-328122

Dear Mr. Aguiar,

I am writing concerning your recent gift offer and other matters.

Concerning the gift, at this time we decline your offer because of the conditions imposed. If you want to make a gift, you are welcome to do so. If you want to control what happens with the gift, we are not interested.

Regarding your operative legal theories, the court is not under any type of stay at this time. Your recusal motion has no legal effect because it is a tertiary recusal motion under Texas Civil Practice & Remedies Code section 30.016. This statute was written exactly for the situation that you have caused; that is, endless delay through meritless motions with no purpose other than to cause the delays. The legislature recognized that this problem existed and wrote the statute to combat this kind of abuse. The statute absolutely controls over Rule 18, and there is no stay following a third (or subsequent) motion to recuse.

Your motion to recuse Judge Brown is before the Supreme Court, not your motion to recuse Judge Telfair, which is in limbo because of the motion to recuse Judge Brown. But the motion to recuse Judge Telfair has no stay effect because of the statute, and the subsequent motion to recuse Judge Brown is likewise subject to the statute. Further, there is no mechanism for an appellate stay without a specific order from a higher court with that effect, an order which has not only not been issued, but your request for such an order has also been specifically denied. Thus, the 387th can make any orders and conduct any hearings that are necessary and proper.

This means that all the orders that the court has made are valid and enforceable. This includes the orders for sanctions and support which you continue to ignore.

OWLAWYERS®
TRIAL LAW
The Wise Choice®
19 Briar Hollow Lane, Suite 200 • Houston, TX 77027
Main: 713-224-1800 • Fax: 713-224-1804

Gloria simply wants to complete this matter and move on with her life. Your actions only serve to stall litigation and do not block the inevitable end of this matter.

If you have a competing legal argument as to why the statue does not control, please confirm that argument and provide support for your theory.

Regarding the visitation and your recording of those periods, at this time I am requesting that you preserve all copies of recordings which relate to the visitation periods. A formal discovery request for all of the video files will be forthcoming shortly. The failure to preserve all copies of the video files will be spoilation—a discovery violation—and we will seek sanctions in that instance.

You currently are behind on spousal support payments and have outstanding obligations for discovery and sanctions. Should you bring yourself current financially and with discovery responses, I would move the court to rescind the capias which is currently outstanding. Our goal is not your arrest or incarceration, but your compliance with the court's orders. If you are interested in settling these issues, please let me know as soon as possible.

I look forward to your response.

Sincerely,

G. Troy Pickett

REGISTERED EMAIL™ | CERTIFIED DELIVERY

This is a Registered Email™ message from **Reinaldo Aguiar Marcano (RJ AGUIAR)**.

Subject: NOTICE OF UPDATE TO PRIMARY CONTACT VECTORS AND CONCURRENT PROFFER OF RESTRICTED WELL-BEING FUNDS FOR MINOR CHILD

Dear Mr. Pickett and Ms. Espina,

Please find below a formal notification regarding modifications to my primary communication channels, followed by a conditional financial proposal explicitly structured to secure the immediate material well-being of my minor child, Marcelo, during the ongoing appellate stay.

I. NOTICE OF UPDATE TO MATERIAL CONTACT INFORMATION & SECURE DATA MIGRATION

Effective immediately, please update your records and service directories to reflect the following adjustments to my primary contact vectors.

Please note that my permanent home address remains entirely unchanged from the layout detailed in "Respondent's Notice of Change of Address" filed on September 29, 2025 (Index #61, Cause No. 25-DCV-328122, 387th District Court) and as recognized in the subsequent Temporary Orders signed on October 15, 2025.

Permanent Residence (Unchanged): 26714 Valleyside Drive, Katy, Texas 77494

New Primary Phone Number (E.164 Format): +870 776 011 468

New Primary Email Address: reinaldo.aguiar.marcano@isbn9781971481296.com

Mandatory Secondary CC Email Address: rj.aguiar.m@gmail.com

Operational Note on Data Security: I have initiated a systematic migration of my electronic infrastructure to a secure, military-grade end-to-end encrypted network environment managed via Preveil.com, which is widely utilized by my peers within the aerospace and defense-industrial complex. While this transition stabilizes over the coming weeks, please ensure that all direct professional correspondence, notices, and electronic service actions dispatched via the Tyler Technologies eFiling framework are sent to my new primary email address while simultaneously copying (**CC'ing**) my secondary Gmail address to guarantee redundancy and immediate receipt.

II. PROFFER OF A RESTRICTED, SINGLE-INSTANCE SUPPLEMENTAL CHILD WELL-BEING GIFT

From a legal standpoint, this correspondence is transmitted directly to counsel and petitioner rather than being filed with the district clerk out of strict adherence to the Texas Rules of Civil Procedure (TRCP). As all parties are aware, the trial court remains under a mandatory statutory stay while the Third Verified Motion to Recuse (originally filed on January 14, 2026, and referred to the Chief Justice by the Hon. Susan Brown on January 27, 2026's Index # 170 on Cause No. 25-DCV-328122) awaits final disposition by the Supreme Court of Texas (SCOTX).

While we await this sovereign jurisdictional ruling, I have observed a structural anomaly that poses an immediate risk to my son's welfare. Due to the fact that the joint financial accounts held at Chase Bank have not yet been closed—contrary to the explicit verbal renditions delivered by Judge Telfair on August 11, 2025—I retain visibility over the linked balance of the Chase account ending in **0720**, which functions as the primary operational node for the child's daily domestic expenses.

I note that this balance has dropped below $800. While I recognize that Ms. Espina may maintain separate, unlinked financial resources, the appearance of diminished liquidity in an account historically tied to Marcelo's support concerns me deeply. I am already paying over $4,000 per month in continuous child support, daycare fees, and comprehensive health insurance premiums. However, because the procedural stay creates an administrative impasse, I am proactively intervening to eliminate any potential material shortfall for our son.

Accordingly, I am tendering a single-instance, voluntary, restricted financial gift in the absolute amount of **$5,000.00 USD**, to be deposited directly via electronic transfer into the Chase account ending in **0720**, subject to the following non-negotiable conditions:

1. Strict Exclusion of Fund Applicability

This $5,000.00 allocation constitutes an independent, third-party gift dedicated exclusively to the minor child. Under no circumstances shall these funds be characterized, argued, or treated as an unforced or voluntary compliance payment toward "Sanctions," "Attorney's Fees," "Petitioner's Rent," or any other financial obligation outlined within the heavily contested and legally void interim trial court orders. My long-standing position remains unchanged: those instruments were executed when the court lacked competent jurisdiction, were advanced in certain instances without proper citation or notice, and have never been formally executed or served to me via certified copies from the District Clerk's office as mandatorily required for Pro Se litigants under the TRCP.

2. Absolute Prohibition Against Legal Diversion

No portion of this $5,000.00 gift shall be diverted, harvested, or deployed by the petitioner or her representatives to finance, subsidize, or advance ongoing or future legal actions, motions, or filings against me. Furthermore, **this money shall not be used to offset any outstanding or future legal invoices, bills, or fees generated by O'Neil Wysocki, P.C. (operating as OWLawyers®) or The ADAMS Law Firm (co-counsel for the Petitioner).**

3. Restricted Child-Centric Allocation Framework

The utilization of these supplemental funds is strictly conditional upon their direct application toward the core survival, enrichment, and care parameters of the minor child. The explicit breakdown of this proffer is structured as follows:

- **Core Material Infrastructure (Shelter, Nutrition, Clothing, Healthcare):** $4,600.00
- **Supplemental Extracurricular and Developmental Activities:** $250.00
- **Age-Appropriate Entertainment and Leisure:** $150.00

Total Restricted Proffer: $5,000.00 USD

III. RESERVATION OF RIGHTS AND RETENTION OF CORPORATE FINANCIAL POSTURE

In addition to the unexecuted joint checking account closures referenced above, my records indicate that Ms. Espina

continues to maintain an open commercial credit card line associated with **Key Opinion Letters, LLC**—an inactive corporate entity for which she previously performed professional services as an independent contractor, and on which she cosigned per Chase banking administrative mandates at the time.

Allowing this legacy commercial credit node to remain open while the primary joint personal checking accounts remain unliquidated creates an inconsistent financial posture. To permanently insulate Marcelo from any future administrative overlap, and to entirely prevent secondary complications regarding historical corporate accounts or ancillary asset integration, I expect the formal closure of this cosigned commercial line of credit to be finalized concurrently with the dissolution of the personal banking lines. This cleanup should be executed the moment the Supreme Court of Texas establishes a clear, jurisdictionally sound framework for the trial court. This offer is extended entirely in good faith to eliminate domestic friction and protect our son from the fallout of this litigation.

IV. INVITATION TO TIMELY COMMUNICATION AND SYSTEM FOR ACCEPTANCE

Moving forward, if genuine, child-centered financial emergencies emerge while the court remains stayed, filing tactical motions for sanctions or demanding additional temporary orders is a highly inefficient and counterproductive avenue for resolving resource shortfalls. The optimal solution is direct, professional communication outlining the specific, verified material needs of the child.

To ensure that this proactive offer does not introduce artificial financial or administrative stress onto the petitioner’s legal representation, I am including a dedicated carve-out for counsel's billable time:

Counsel Fee Allowance: If Mr. Pickett or representing co-counsel determine that reviewing and responding to this offer requires compensable professional time, they are explicitly authorized to either deduct the standard billable equivalent of that administrative drafting time directly from the $5,000.00 fund pool prior to distribution, or forward an itemized invoice for this specific response directly to my secondary email address, which I agree to settle independently.

Method of Acceptance

To accept this restricted well-being gift and initiate the immediate electronic transfer of the $5,000.00 balance to the Chase account ending in 0720, Mr. Pickett, acting as the authorized legal representative for the petitioner, needs only to reply to this email with the explicit statement: **"We accept the help offered under the terms and conditions outlined herein."**

This simple digital confirmation will establish a binding, out-of-court administrative agreement, allowing us to stabilize Marcelo's immediate environment without necessitating further intervention from a stayed judiciary.

I await your timely response.

Best professional regards,
