In re Patent Application of:	Reinaldo Javier Aguiar Marcano
Application Number:	19/639,271
Confirmation Number:	6826
Filing Date:	April 5, 2026
Group Art Unit:	To Be Assigned
Examiner:	NGUYEN, QUANG M.
Title of Invention:	HIGH-RADIX MASS STORAGE SYSTEM

APPLICANT RESPONSE TO THE NOTICE OF INCOMPLETE REPLY, FORMAL CURE OF DECLARATION WITH REPLACEMENT OATH (37 CFR § 1.63), AND FORMAL REQUEST TO HOLD FEE REQUIREMENTS IN ABEYANCE PENDING DECISION ON CONCURRENTLY FILED PETITION UNDER 37 CFR § 1.183

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Sir:

In response to the Notice of Incomplete Reply mailed on August 17, 2026, the pro se Applicant, Reinaldo Javier Aguiar Marcano, respectfully submits this formal response and requests the Office to hold all procedural deadlines and remaining fee-payment requirements in abeyance pending the Director's decision on the concurrently filed Petition under 37 CFR § 1.183.

1. Technical Compliance and Formal Cure of Declaration Deficiency

Applicant notes that the pre-examination page-layout deficiencies cited in the initial USPTO notices (Abstract and Claims commencing on separate pages) were **completely and successfully cured** by the replacement pages submitted on July 31, 2026, and processed by the Office of Pre-Examination.

To resolve the outstanding declaration defect cited in the Notice of Incomplete Reply mailed on August 17, 2026, Applicant hereby submits a complete, executed **Replacement Inventor's Oath or Declaration under 37 CFR § 1.63** (appended natively below), which contains the explicit statutory declaration that:

"The above-identified application was made or authorized to be made by me."

With this submission, Applicant is now in **100% complete technical, layout, formatting, and declaration compliance** with all physical document and administrative standards. The sole remaining requirements are the basic filing fees, which are the direct subject of the concurrent 1.183 Petition.

2. Notification of Concurrently Filed Petition under 37 CFR § 1.183

Applicant formally notifies the Examiner and the Technology Center (TC) Director that concurrently with this response, Applicant has filed a formal **Petition to the Director under 37 CFR § 1.183** (appended natively hereto as **Appendix II**) to suspend prosecution on national defense procurement, constitutional due process, and physical incapacitation grounds.

The required petition filing fee under **37 CFR § 1.17(f)** (Fee Code: 2462 for Small Entity) is paid in full concurrently herewith. This 1.183 Petition specifically requests the Director to suspend all prosecution and **stay all other remaining pre-examination fee-payment requirements** (including the basic filing, search, examination, and non-DOCX fees) until such time as the Applicant's ongoing, state-court extrajudicial physical restraint is resolved and he is able to safely secure patent counsel.

Filing this Petition concurrently with the formalities response and paying the required petition fee ensures the protection of the record and avoids administrative abandonment while the equitable and constitutional grounds are evaluated by the Office of Petitions.

3. Cross-Reference and Incorporation of the Master Hub Application 19/559,705 Record

To establish the full, certified factual context of the extraordinary circumstances justifying this request, and pursuant to the Applicant's duty of candor under 37 CFR § 1.56, the Examiner and Technology Center (TC) Director are respectfully directed to the master record of Applicant's co-pending **Hub Application No. 19/559,705** (Filing Date: March 6, 2026; Title: *"HIGH-BANDWIDTH, LOW-LATENCY DATA TRANSMISSION SYSTEM AND PROTOCOL"*).

Specifically, the Examiner and Director are directed to:

1. The **Superseding Petition to Suspend Prosecution under 37 CFR § 1.183** e-filed in Hub Application No. 19/559,705 on August 20, 2026. This petition incorporates a comprehensive set of cryptographically verified administrative claims and exhibits (Exhibits E-1 through E-10) filed under DFARS 227.7004 with senior Department of Defense leadership and the general counsels of major aerospace contractors;

2. The companion **Petition to the Director under 37 CFR § 1.183 to Exercise the Mandatory Ministerial Duty to Waive Regulatory Pre-Examination Holds and Order Immediate Early Publication** e-filed in Hub Application No. 19/559,705 on August 4, 2026; and

3. The **active, original Habeas Corpus proceeding pending before the Supreme Court of the United States (Docket No. 26-186, Original)** and the companion high-court filings attached directly as native exhibits to the aforementioned petitions.

Because the instant application is a direct technological daughter/companion in the Asynchronous Base Optical Computing Technological Cluster that natively extends the foundational optical link of the 19/559,705 Hub, the national security risks, mail blockade, and physical constraints detailed of record in the Hub application are identical and fully applicable here. Accordingly, Applicant incorporates the entire file wrapper and master litigation record of Application No. 19/559,705 herein by reference.

4. Request to Hold Remaining Fee Requirements in Abeyance and Defer Abandonment

Pursuant to administrative efficiency, judicial economy, and constitutional due process, Applicant respectfully requests that the USPTO **hold all remaining pre-examination fee-payment requirements** (including the basic filing, search, examination, and non-DOCX fees, while the required petition filing fee has been paid concurrently herewith) **in abeyance** pending the final administrative decision of the Director on the concurrent Petition under 37 CFR § 1.183.

Forcing a pro se applicant to pay substantial filing fees and non-DOCX surcharges while they have an active, concurrent Petition to waive and stay those exact rules would render the 1.183 Petition process moot and violate basic tenets of administrative fairness. Accordingly, Applicant requests that the USPTO defer any notices of abandonment or further pre-examination actions until the Office of Petitions has officially ruled of record on the concurrent 1.183 Petition.

5. Conditional Request for Extension of Time

To the extent that any extension of time is deemed procedurally necessary under 37 CFR § 1.136(a) to maintain the pendency of this response and prevent administrative abandonment, such extension is requested conditionally herein, with the request that the fees for such extension be held in abeyance or waived under the concurrent Petition under 37 CFR § 1.183.

Respectfully submitted,

/Reinaldo Javier Aguiar Marcano/

August 20, 2026

REPLACEMENT INVENTOR'S OATH OR DECLARATION UNDER 37 CFR § 1.63

As the below-named inventor, I hereby declare that:

1. My name is **Reinaldo Javier Aguiar Marcano**, a citizen of the United States, residing at **26714 Valleyside Drive, Katy, Texas 77494**;

2. My correspondence and mailing address is **2302 Britton Ridge Drive, Katy, Texas 77494**;

3. My verified email addresses for electronic service are `reinaldo.aguiar.marcano@isbn9781971481296.com` and `rj.aguiar.m@gmail.com`;

4. I believe I am the original inventor of the claimed invention in the national utility application entitled:
   "HIGH-RADIX MASS STORAGE SYSTEM", which was filed with the USPTO under Application No. **19/639,271** on **April 5, 2026** (Confirmation No. **6826**);

5. **The above-identified application was made or authorized to be made by me**; and

6. I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code (18 U.S.C. § 1001).

Signature of Inventor: 

/Reinaldo Javier Aguiar Marcano/

Date of Signature: August 20, 2026

APPENDIX I: CO-PENDING PORTFOLIO PETITION

PETITIONER'S SUPERSEDING PETITION TO SUSPEND PROSECUTION UNDER 37 CFR § 1.183 ON NATIONAL DEFENSE AND CONSTITUTIONAL DUE PROCESS GROUNDS IN MASTER HUB APPLICATION NO. 19/559,705

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

In re Patent Application of:	Reinaldo Javier Aguiar Marcano
Application Number:	19/559,705
Confirmation Number:	6781
Filing Date:	March 6, 2026
For:	HIGH-BANDWIDTH, LOW-LATENCY DATA TRANSMISSION SYSTEM AND PROTOCOL
Group Art Unit:	To Be Assigned
Examiner:	To Be Assigned

SUPERSEDING PETITION TO THE DIRECTOR UNDER 37 CFR § 1.183 TO SUSPEND PROSECUTION ON CONSTITUTIONAL DUE PROCESS AND NATIONAL DEFENSE GROUNDS [REQUEST FOR EXPEDITED ADMINISTRATIVE PROCESSING]

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Sir:

Reinaldo Javier Aguiar Marcano, the inventor prosecuting the above-identified patent application Pro Se as Applicant and Petitioner, respectfully submits this Superseding Petition to the Director under **37 CFR § 1.183**. This submission supersedes and replaces the petition under 1.183 e-filed in this application on July 31, 2026, and any subsequent filings of record, in its entirety, to satisfy the Petitioner's absolute duty of candor and incorporate newly generated, critical, cryptographically verified documentary evidence of record (Exhibits E-1 through E-9).

Petitioner respectfully requests a temporary suspension of all prosecution and a stay of all procedural deadlines in this application for a period of six (6) months, or until such time as the Applicant is able to safely secure legal representation.

Petitioner further requests **expedited administrative processing** of this Superseding Petition based on urgent national security, sovereign interest, and national defense procurement grounds.

Because the required petition fee under **37 CFR § 1.17(f)** (Fee Code: 2462 for Small Entity) was already successfully paid and processed on July 31, 2026, no additional payment is required for this superseding filing.

In support of this Petition, Applicant and Petitioner respectfully shows the following extraordinary circumstances:

I. INTENT OF THE PETITION

The purpose of this Superseding Petition is to protect the primary Hub patent application of vital public, aerospace, and national security interest from procedural dismissal or involuntary abandonment. Due to an ongoing, coordinated state-court extrajudicial intervention that has resulted in the physical restraint of the pro se inventor, the systematic block of his postal correspondence, and an active emergency docketing before the Supreme Court of the United States, Applicant is currently legally and physically incapacitated from prosecuting this application or safely retaining patent counsel.

This Petition seeks to temporarily "freeze" the administrative status of this application to protect the underlying invention from loss, until the federal judiciary resolves the constitutional emergencies currently pending in the Supreme Court of the United States, after which Applicant intends to procure formal patent counsel to complete prosecution.

II. CREDENTIALS, INVENTOR TRACK RECORD, AND AEROSPACE SYNERGY

To establish credibility and assist the Office of Petitions in evaluating the high technological value of the targeted intellectual property, Applicant and Petitioner formally submits his established professional credentials as a technologist of record with the USPTO:

1. **Professional Stature:** Petitioner is a former Google Search Ranking Staff Engineer and a former Managing Director at Goldman Sachs.
2. **Demonstrated Patent Success:** Petitioner has a demonstrated history of successful patent prosecution before the USPTO and is the named sole inventor on two previously issued Google Inc. patents of significant commercial and operational relevance:
    - **U.S. Patent No. 9,275,419 B1** (*"Method for building, expanding or complementing a social graph based on contact information"*, Issued March 1, 2016, Assignee: Google Inc.).
    - **U.S. Patent Application Publication No. 2015/0205766 A1** (*"Serving combined resources to a browser client"*, Published July 23, 2015, Assignee: Google Inc.).

The technology in this cluster represents critical, foundational breakthroughs in optically-native computing, disaggregated compute clusters, asynchronous physical networks, and secure high-radix processing, specifically engineered to solve the massive physical, thermal, and weight constraints currently bottlenecking modern **aerospace** and quantum computing platforms.

These credentials demonstrate that the Petitioner is an established and successful inventor, and that the instant application represents highly sophisticated, high-value technology that demands serious, rigorous administrative protection.

III. THE MASTER PATENT DEPLOYMENT PORTFOLIO AND FOUR TECHNOLOGICAL CLUSTER VECTORS

This application is not an isolated filing, but rather the foundational anchor hub of a tightly integrated, co-dependent, forty-eight (48) application deployment portfolio. This master portfolio is technologically organized into four (4) distinct, dedicated technological cluster vectors, all anchored to the central many-to-one Hub of Application No. 19/559,705:

A. The Base Optical Computing Technological Cluster (14 Daughters)

This core cluster governs the foundational hardware optical computing link, optical memory bus, and optically-native CPU architectures:

1. **Application No. 19/561,236** (Title: *"PROTOCOL FOR PHYSICAL AND DATA-LINK LAYER ENCODING NEGOTIATION"*), which directly governs the lower-layer negotiation protocol for the 19/559,705 hub.
2. **Application No. 19/561,259** (Title: *"PROTOCOL FOR ENCODING MAP ROTATION FOR FORWARD SECRECY"*), which provides encoding map rotation protocol for forward secrecy.
3. **Application No. 19/561,223** (Title: *"SYSTEM AND METHOD FOR N-GRAM PARALLEL DATA ENCODING"*), which implements parallel data encoding techniques across the optical link.
4. **Application No. 19/561,228** (Title: *"METHOD FOR LEGACY PROTOCOL TUNNELING OVER A HIGH-CARDINALITY INTERFACE"*), which provides a method for legacy protocol tunneling over the high-cardinality interface.
5. **Application No. 19/562,825** (Title: *"SYSTEM FOR AN OPTICALLY-NATIVE CENTRAL PROCESSING UNIT"*), which discloses a system for an optically-native central processing unit using the link.

6. **Application No. 19/571,558** (Title: *"SYSTEM AND METHOD FOR HIGH-RADIX COMPUTING USING WAVELENGTH-DISCRIMINATING PHOTOTRANSISTORS"*), which implements high-radix computing using wavelength-discriminating phototransistors.

7. **Application No. 19/562,847** (Title: *"APPARATUS FOR AN OPTICAL DATA FABRIC SWITCH"*), which discloses the physical apparatus for an optical data fabric switch.

8. **Application No. 19/639,271** (Title: *"A HIGH-RADIX MASS STORAGE SYSTEM"*), which implements a high-radix mass storage system integrated with the bus.

9. **Application No. 19/560,031** (Title: *"METHOD AND SYSTEM FOR PIXEL-BASED NETWORK ROUTING IN A MASSIVELY PARALLEL OPTICAL INTERCONNECT"*), which discloses pixel-based network routing in a massively parallel optical interconnect.

10. **Application No. 19/560,038** (Title: *"OPTICAL COMPUTING ARCHITECTURE AND SYSTEM"*), which discloses the overall optical computing architecture and system.

11. **Application No. 19/562,838** (Title: *"METHOD FOR ENERGY-EFFICIENT COMPUTING VIA CLOCK SPEED REDUCTION"*), which implements energy-efficient computing via clock speed reduction inside the core.

12. **Application No. 19/562,845** (Title: *"A PHYSICALLY DISAGGREGATED COMPUTING SYSTEM"*), which discloses a physically disaggregated computing system using optical links.

13. **Application No. 19/639,219** (Title: *"A CENTRAL PROCESSING UNIT ARCHITECTURE FOR NATIVE PARAMETRIC AND SYMBOLIC COMPUTATION"*), which provides a central processing unit architecture for native parametric and symbolic computation.

14. **Application No. 19/640,945** (Title: *"A METHOD FOR ASYNCHRONOUS SECURE COMMUNICATION WITH POST-HOC KEY DERIVATION"*), which implements a method for asynchronous secure communication with post-hoc key derivation to protect cryptographic payloads from high-throughput optical cryptanalysis.

The Core Cryptographic Shield and ITAR National Security Nexus: The massive bandwidth and processing speeds enabled by Petitioner's companion optical computing systems represent an immense technological leap. However, these extremely high-throughput systems also introduce a severe national security risk: they make the brute-forcing of traditional, copper-bus-based encryption keys computationally trivial.

The master cryptographic application in the Optical cluster, **Application No. 19/640,945** (Title: *"A METHOD FOR ASYNCHRONOUS SECURE COMMUNICATION WITH POST-HOC KEY DERIVATION"*), represents the vital defensive "shield" designed to restore balance by providing a method for asynchronous secure communication with post-hoc key derivation that remains completely backwards-secure and resilient against continuous, optical-scale cryptanalysis.

Unlike companion applications in this cluster, Petitioner has deliberately **not** preemptively assigned or executed a public-interest license grant in the 19/640,945 specification. Because high-grade cryptographic technologies are subject to strict export controls under the **International Traffic in Arms Regulations (ITAR)** and **Export Administration Regulations (EAR)**, Petitioner recognized that executing a blind license grant without direct, coordinated interaction with authorized national security, defense, or NSA officials would be procedurally and legally irresponsible.

However, the lack of a pre-existing license grant makes the administrative protection of this application **even more urgent**. If the USPTO allows No. 19/640,945 to be abandoned in private pre-exam processing due to Applicant's forced silence, the technology falls into the public domain — allowing foreign adversaries to extract, copy, or patent the technology through international corporate proxies.

If a foreign adversary secures control of this backwards-secure, post-hoc key derivation technology, or implements it to neutralize US military cryptanalysis, **it will place American warfighters, intelligence operatives, and citizens deployed in contested operational theaters domestic and abroad at a catastrophic physical and strategic disadvantage.**

The Aerospace and JADC2 Nexus: Traditional electrical data buses are completely inadequate to handle the massive sensor fusion, real-time distributed computing, and high-throughput cryptographic data fabrics required by modern national defense platforms — such as the F-35 Joint Strike Fighter's Technology Refresh 3 (TR-3) upgrade, Collaborative Combat Aircraft (CCA), or the next-generation Joint All-Domain Command and Control

(JADC2) tactical network. Attempting to achieve these multi-gigabit computing arrays under the strict weight and thermal boundaries of airborne fighters and battlespace command networks requires abandoning legacy monolithic architectures. Physically disaggregated computing platforms and parametric encodings, natively interconnected via optical buses, represent the only physical means to overcome these bottlenecks. Due to the high strategic relevance of these technologies, the Petitioner has filed formal Administrative Claims for Patent Infringement under DFARS 227.7004 with senior DoD leadership concerning Lockheed Martin (April 17, 2026; Exhibit E-1), Palantir and Anduril (April 17, 2026; Exhibit E-2), as well as a unified tactical nexus claim concerning the JADC2 communications matrix served upon Secretary of Defense Pete Hegseth (June 4, 2026; Exhibit E-3).

Because this application cluster directly encumbers the next-generation aerospace computing upgrades currently being commercialized by major defense contractors, any procedural or administrative attack that targets the Petitioner's physical liberty or blocks his mail represents an existential threat to this entire federal-interest technology family.

B. The Parametric Encoding and Symbolic Representation Architectures Cluster (21 Daughters)

This cluster protects a hardware-agnostic, multi-medium mathematical paradigm of post-binary parametric encoding, symbolic data representation, and multi-state signaling. It includes: Application Nos. 19/640,973, 19/645,371, 19/559,656, 19/639,265, 19/638,192, 19/639,222, 19/639,253, 19/645,192, 19/700,254, 19/699,028, 19/638,176, 19/639,220, 19/639,245, 19/639,255, 19/639,258, 19/561,246, 19/574,352, 19/645,194, 19/641,125, 19/559,972, and 19/658,570.

C. The Asynchronous Disaggregated Computing and Dynamic Resource Orchestration Cluster (11 Daughters)

This cluster protects a hardware-agnostic computing paradigm of physically disaggregated computer architectures, functional segregation of bare-metal resource pools (CPUs, QPUs, and storage), and real-time asynchronous resource orchestration. It includes: Application Nos. 19/562,829, 19/562,841, 19/562,853, 19/562,855, 19/562,818, 19/562,822, 19/560,037, 19/560,061, 19/560,033, 19/562,844, and 19/560,062.

D. The Tactical Off-Grid Infrastructure and Physical Resiliency Cluster (8 Daughters)

This cluster protects a hardware-agnostic paradigm of autonomous robotic data logistics, asynchronous physical sneaker-net data transport networks, and secure off-grid physical dead drop routing protocols. It includes: Application Nos. 19/560,065, 19/560,066, 19/560,068, 19/560,069, 19/560,071, 19/574,356, 19/746,749, and 19/748,206.

IV. CONSTITUTIONAL DUE PROCESS AND FIFTH AMENDMENT PROPERTY RIGHTS

Under established federal law, a patent application is a cognizable **private property interest** protected under the **Due Process Clause of the Fifth Amendment** of the United States Constitution.

Under the governing procedural framework set forth in *Mathews v. Eldridge*, 424 U.S. 319 (1976), federal agencies are constitutionally required to provide essential procedural safeguards before depriving a citizen of protected property. To satisfy the pre-conditions of due process, the government must provide (1) actual and effective notice, and (2) a meaningful opportunity to be heard before an impartial decision-maker.

Factual capacity to participate is the core constitutional question. Here, due to a severe regional United States Mail blockade and a live, void civil Capias that constructively confines the pro se Applicant, the essential pre-conditions of due process have been completely demolished. Factual notice was impossible, and the capacity to meet administrative prosecution deadlines or physically travel to retain patent counsel was entirely suppressed.

Because the printed formalities notices were never physically delivered via the USPS, the Applicant received no notice of the outstanding requirements until discovering them by accident on the electronic USPTO Patent Center portal on July 30, 2026. Therefore, under constitutional due process mandates:

Under the USPTO's own regulations, MPEP provisions, and Fifth Amendment constitutional mandates, physical paper notice served via the United States Postal Service remains the primary, legally binding notification method for Pro Se litigants. E-Notification cannot

substitute for this primary method unless there is explicit and verified actual receipt.

Under the foundational standards of *Mullane v. Central Hanover Bank & Trust Co.*, 339 U.S. 306 (1950) and *Jones v. Flowers*, 547 U.S. 220 (2006), when the government becomes aware that its primary notice mechanism (physical mail) has failed—such as when paper letters are returned to sender as undeliverable due to a regional mail block it has a mandatory constitutional obligation to take active, reasonable alternative steps to ensure actual notice is received. Simply relying on passive electronic portal dockets or assuming emails (which may be filtered, rejected, or un-monitored) are received does not satisfy the state's burden under *Jones v. Flowers* once physical delivery fails.

Therefore, under constitutional due process mandates:

1. **Notice Commencement:** The statutory and regulatory response clock (the two-month period to reply) must formally commence on the date of actual notice namely, **July 30, 2026**—rather than the printed dispatch dates in April 2026.

2. **Fee Restoration:** Because the Applicant was unconstitutionally deprived of timely notice, forcing the Applicant to pay extension-of-time fees, late filing fees, and the petition filing fee under 37 CFR § 1.17(f) represents an unconstitutional deprivation of financial property. Since the Applicant acted in complete good faith and filed standard formalities responses (titled "APPLICANT RESPONSE TO PRE-EXAM FORMALITIES NOTICE") over a three-day period from July 30, 2026, to August 1, 2026, immediately upon acquiring actual notice, the USPTO is constitutionally and administratively obligated to fully refund or restore all extension-of-time fees, late filing fees, and the petition filing fee paid by the Applicant to bring these un-notified applications into compliance and seek this equitable relief.

Explicit Reservation of Rights and Non-Waiver: Due to the imminent threat of procedural decay and involuntary abandonment under duress, the Applicant acted immediately upon July 30 discovery by compiling and filing emergency Applicant Responses across all forty-four (44) affected applications over a three-day period from July 30, 2026, to August 1, 2026.

Under the governing standard of *D.H. Overmyer Co. v. Frick Co.*, 405 U.S. 174 (1972), any waiver of constitutional due process rights must be made knowingly, voluntarily, and intelligently, evaluated under a strict review of capacity and circumstances.

Accordingly, the Petitioner formally establishes that his emergency filings, executed over the three-day period from July 30, 2026, to August 1, 2026, were executed strictly as a protective measure under extreme administrative duress to preserve irreplaceable intellectual property from procedural forfeiture. These emergency filings **shall not be construed as a waiver of the Petitioner's Fifth Amendment Due Process rights, nor as a concession or waiver of the right to challenge the lack of timely, actual notice** under the law. Grounding this request under 37 CFR § 1.183 in these constitutional protections is necessary to preserve the administrative integrity of the record for potential judicial review by the Supreme Court of the United States.

V. STATEMENT OF EXTRAORDINARY FACTS, SOVEREIGN LICENSE, AND DFARS EXHIBITS

An extraordinary situation exists under 37 CFR § 1.183 because of a severe and coordinated collision of physical restraint, mail obstruction, and active federal national defense procurement disputes:

1. **Unconstitutional Physical Restraint under Void Capias:** A state trial court in Fort Bend County, Texas, acting in direct violation of mandatory automatic stays, issued a void civil Writ of Capias (arrest warrant) against the Applicant dated May 26, 2026 (attached hereto as **Exhibit E-8**), pursuant to a signed court Order for Capias dated May 15, 2026 (attached hereto as **Exhibit E-9**), weaponizing the local judiciary to impose a constructive *de facto* confinement upon the Applicant within his office space. Opposing parties and state clerks deliberately withheld and suppressed the publication and issuance of the Writ of Capias for eleven (11) days from May 15 to May 26, 2026, maliciously structured to prevent the Pro Se Applicant from seeking immediate judicial recourse, filing protective stays, or retaining registered legal counsel prior to being subjected to a continuous threat of physical arrest.

   This physical confinement commenced on May 15, 2026, and is still ongoing totaling 79 days of unlawful physical restraint as of the filing of this Petition. This maneuver forced the Pro Pro Se Applicant into a complex, dual-front legal battle: fighting a void Capias order (a direct threat to physical liberty) without the ability to safely travel to meet with or retain an attorney, while simultaneously facing critical administrative

deadlines at the USPTO (a direct threat to private property). This overlapping timing creates a simultaneous, dual violation of Due Process, maliciously engineered to run the clocks out on these irreplaceable federal-interest patent applications while the Applicant's physical liberty is actively suppressed.

2. **Systematic Obstruction of United States Mail and Factual Impact on USPTO Applications:** Furthermore, as documented in active court records, Applicant's physical residence and corporate office have been systematically targeted by third-party adversaries who falsely designated the properties as "vacant" with the United States Postal Service, blocking and returning critical paper correspondence.

   To this date, the Applicant has not received a single physical paper correspondence from the USPTO via the USPS for any of his multiple applications in active processing. If these letters were dispatched by the USPTO, they should have been returned to sender as undeliverable, meaning the USPTO should maintain records indicating the Applicant never received physical delivery.

   As a direct consequence of this mail blockage, the Applicant was completely unaware until July 30, 2026, of the existence of any of the forty-four (44) different "Notice to File Missing Parts" (or other pre-exam formalities letters) that had been issued and processed across forty-four (44) out of his seventy-eight (78) distinct pending applications. Many of these notices (e.g., printed on April 9, 2026) were outstanding for over one hundred and twelve (112) days before the Applicant discovered them online.

   Upon discovering this regional mail blockage on July 30, 2026, and despite currently operating under a live, void civil capias and being unable to secure physical legal representation, the Applicant immediately acted by drafting and filing an "APPLICANT RESPONSE TO PRE-EXAM FORMALITIES NOTICE AND PETITION FOR EXTENSION OF TIME" for all forty-four (44) of the applications that according to the USPTO portal had received a notice coded as NTC.MISS.PRT.

   An objective observation of the file wrappers reveals a notable pattern. The most targeted and foundational application in the portfolio, Hub Application No. 19/559,705 (filing date: March 6, 2026), had its "Notice to File Missing Parts" printed on April 9, 2026, yet the Applicant never received it. Furthermore, every single pending daughter application that specifically referenced, cited, or mentioned Hub Application No. 19/559,705 (specifically, Application Nos. 19/561,236, 19/561,259, 19/561,223, and 19/562,825) similarly received a "Notice to File Missing Parts" that was never physically delivered to the Applicant, causing all of their responses to become overdue.

Conversely, other applications filed before this group that had similar minor formalities imperfections but did not mention or reference the 19/559,705 Hub application do not appear to have been issued any such "Notice to File Missing Parts" according to the USPTO Patent Center portal.

While the Applicant presents these objective details strictly as factual observations of record to establish the extreme circumstances of regional mail disruption and not as an accusation of wrongdoing against any employee of the USPTO, they clearly illustrate why a temporary suspension of action and a waiver of strict deadlines are absolutely necessary to protect these critical, federal-interest assets from covert, procedural decay in administrative obscurity.

3. **Active Supreme Court of the United States Proceeding:** The legality of this Capias warrant, the systematic regional due process deprivations, and the obstruction of Applicant's correspondence are currently the subject of an active **Emergency Application for Writ of Injunction and Stay** pending before the **Supreme Court of the United States** under **Docket No. 26A39** (submitted to Circuit Justice Samuel A. Alito, Jr.), as well as a companion **Petition for an Extraordinary Writ of Habeas Corpus** filed on July 16, 2026.

   As of the date of this filing, the companion Habeas Corpus Petition has been pending docketing before the Supreme Court for 17 days. No physical mail or written correspondence regarding this high-court filing has been received by the Petitioner at his physical residence or office, which strongly suggests that the regional mail blockade may be actively impeding the Petitioner's ability to receive timely notifications from the Supreme Court clerk, mirroring the USPTO mail block.

4. **Active Sovereign Interest and Whistleblower Retaliation:** This entire technology cluster is of critical public and national sovereign interest. As drafted and filed in the specification of Hub Application No. 19/559,705, the Applicant has granted a perpetual, royalty-free, non-exclusive license to the United States Government and its agencies to practice and use the invention worldwide for any and all governmental and defense purposes.

   This technology is also the subject of multiple **Formal Administrative Claims for Patent Infringement under DFARS 227.7004** submitted by the Applicant to Senior Leadership of the Department of Defense and the general counsels of targeted defense primes. Facing immense commercial and legal liabilities under these claims, Applicant has reason to believe that private adversaries have actively engineered these

state-court civil traps and regional mail blocks specifically to force the procedural dismissal or involuntary abandonment of this critical application cluster, thereby attempting to neutralize the public-interest claims.

Incorporation of Cryptographically Verified DFARS Exhibits: To establish the objective reality of this federal procurement dispute and national security interest, Applicant attaches directly to the end of this Petition the following cryptographically verified administrative claims submitted under **DFARS 227.7004** to the Senior Leadership of the Department of Defense and the General Counsel of targeted contractors:

- **Exhibit E-1:** Administrative Infringement Claim under DFARS 227.7004 submitted to the F-35 Joint Program Office (JPO) Contracting Directorate and Lockheed Martin Corporation, concerning the F-35 Technology Refresh 3 (TR-3) integrated core processor, dated April 17, 2026.
- **Exhibit E-2:** Administrative Infringement Claim under DFARS 227.7004 submitted to the Army Contracting Command and the National Geospatial-Intelligence Agency, concerning Palantir Technologies (Project TITAN) and Anduril Industries, dated April 17, 2026.
- **Exhibit E-3:** Administrative Infringement Claim under DFARS 227.7004 JADC2 Tactical Communications Matrix submitted to Secretary of Defense Pete Hegseth, dated June 4, 2026.
- **Exhibit E-4:** Administrative Infringement Claim under DFARS 227.7004 submitted to SpaceX, Lockheed Martin, and Viasat concerning Space-to-Ground communications, dated April 17, 2026.
- **Exhibit E-5:** Administrative Infringement Claim under DFARS 227.7004 submitted to NVIDIA Corporation and Intel Federal LLC concerning heavy-compute silicon microelectronics layers, dated June 4, 2026.
- **Exhibit E-6:** Master Administrative Infringement Claim under DFARS 227.7004 concerning Mobile, Portable, and Virtual Reality platforms submitted to the DoD CIO and enterprise tech companies (Google, Apple, Microsoft, Meta, SAIC), dated June 5, 2026.
- **Exhibit E-7:** Administrative Infringement Claim and Compliance Risk Notice under DFARS 227.7004 submitted to JPMorgan Chase & Co., dated June 3, 2026.

VI. NARRATIVE ANCHOR OF THE MASTER RECORD

To establish the objective, certified facts of this extraordinary situation, and to avoid unnecessary administrative duplication, Applicant and Petitioner formally **retains and relies upon the Master Litigation Record** currently active and of record within the file wrapper of this instant **Hub Application No. 19/559,705**.

Specifically, the Director is directed to the formal **Information Disclosure Statement (IDS) filed in Application No. 19/559,705 on July 31, 2026**, which is fully active in this record, and to the following specific Non-Patent Literature (NPL) items:

1. **NPL Item (j) — Sullivan & Cromwell Correspondence:** E-filed on July 31, 2026, in this instant Application No. 19/559,705 as file 19-559-705-NPL-_j_Sullivan-Cromwell-Fax-12 pdf, this document contains the *"Chain of Correspondence with Sullivan & Cromwell LLP / RE: JPMorgan Chase & Co./Compliance"* (dated July 30-31, 2026). This of-record correspondence establishes that international financial compliance networks have been formally engaged with the immense liability and infringement risks posed by this specific technology cluster, proving the direct economic motive of the adversaries to force its procedural abandonment.

2. **NPL Item (d) — Certified Disclosure Log:** E-filed on July 31, 2026, in this instant Application No. 19/559,705 as file 19-559-705-NPL-_d_..., this document contains the *"Federal Patent Docket, Vol. I: The Certified USPTO Disclosure Log Exposing Corporate Lawfare and Securing Sovereign Defense Assets"* (published July 28, 2026), documenting the systematic, county-wide efforts of adversaries to disrupt Applicant's patent portfolio.

The Director is requested to review these active of-record documents directly within the active file wrapper of this instant Application No. 19/559,705 to verify the extreme measures being deployed to obstruct this prosecution.

VII. COMPLIANCE WITH 37 CFR § 1.183 AND THE REQUEST FOR RELIEF

Under **37 CFR § 1.183**, the Director may suspend or waive any non-statutory requirement of the regulations when an extraordinary situation exists and justice requires.

Applicant does not seek to waive any statutory requirements under Title 35 of the United States Code. Rather, Applicant seeks a temporary suspension of the USPTO's administrative rules under **37 CFR § 1.103(a)** (Suspension of Action) to waive the requirement that no reply be outstanding, and to protect this application while the physical and legal constraints are resolved by the federal courts.

Justice heavily requires this waiver. Denying this petition would allow hostile third parties to successfully co-opt state judicial power and mail delivery blocks to destroy a critical federal-interest asset, causing irreparable harm to both the inventor and the sovereign licensee.

VIII. PRAYER FOR RELIEF

WHEREFORE, Applicant and Petitioner respectfully prays that the Director:

1. Find that an extraordinary situation exists under 37 CFR § 1.183 where the interests of justice and the constitutional protections of the **Fifth Amendment** require the waiver of non-statutory administrative rules;

2. Grant **immediate expedited processing** of this Petition on National Defense and Aerospace procurement grounds;

3. Waive the strict response deadlines for any outstanding pre-exam notifications, including the Notice to File Missing Parts, formally reset the notice commencement date to July 30, 2026, and order a complete refund of all extension-of-time fees, late filing fees, and the petition filing fee paid concurrently herewith;

4. Order a **six-month administrative suspension of all prosecution** under 37 CFR § 1.103(a), to be renewed upon request if necessary, to protect this application from procedural dismissal or abandonment; and

5. Direct that all electronic notifications and correspondence in this application be routed to Applicant and Petitioner's secure registered email address (reinaldo.aguiar.marcano@isbn9781971481296.com) to bypass the physical mail block.

Respectfully submitted,

/Reinaldo Javier Aguiar Marcano/

Reinaldo Javier Aguiar Marcano, Pro Se Applicant and Petitioner
Date: August 2, 2026

RE: ACTUAL KNOWLEDGE OF PATENT INFRINGEMENT (35 U.S.C. § 154(d)), INITIATION OF DFARS 227.7004 ADMINISTRATIVE CLAIM, AND NOTIFICATION OF POTENTIAL PROCUREMENT FRAUD BY LOCKHEED MARTIN CORPORATION

DATE: April 17, 2026

DELIVERY METHOD: Cryptographically Verified via Registered Email (RPost)

DEAR:

Lt. Gen. Schmidt and the F-35 JPO Contracting Directorate,

ISBN 9781971481296

This comprehensive technical and legal brief is served upon you in your official capacities within the United States Department of Defense (DoD).

This document constitutes a formal Administrative Claim for Patent Infringement under the Defense Federal Acquisition Regulation Supplement (DFARS) 227.7004. The purpose of this claim is to notify the United States Government of a highly anomalous and legally precarious situation involving the unauthorized commercialization of a foundational patent portfolio by Lockheed Martin Corporation.

I. THE U.S. DEPARTMENT OF DEFENSE LICENSE GRANT AND STRATEGIC BLOCKADE

Under standard operating procedures defined by 28 U.S.C. § 1498, the United States Government exercises eminent domain over domestic patents, shielding its defense contractors from civil injunctions and assuming financial liability for infringement.

However, the inventor of the Aguiar Marcano Intellectual Property Portfolio—which comprises 52 foundational patent applications published defensively in *The Architecture of Control* (ISBN 978-1-97-148129-6)—has proactively granted an irrevocable, perpetual, no-fee license to the federal government for all national defense purposes. The United States Department of Defense, specifically through Under Secretary of Defense Emil Michael, has been placed on direct notice of this license grant and is the designated authority administering this license on behalf of the military.

Lockheed Martin is currently utilizing these specific patented architectures to overcome severe computational bottlenecks in their aerospace and quantum programs. By embedding the research, development, and licensing costs of these technologies into multi-billion-dollar government contracts, Lockheed Martin is effectively charging the American taxpayer for intellectual property that the government already possesses the legal right to utilize indefinitely and without cost. Failing to halt the disbursement of funds to this contractor for pre-licensed intellectual property constitutes a gross mismanagement of taxpayer dollars.

II. Satisfaction of DFARS 227.7004 Administrative Claim Requirements

To compel immediate administrative intervention, this communication strictly adheres to the requirements of DFARS 227.7004(a) and (b):

1. **Allegation of Infringement:** We formally allege that the systems provided and developed by Lockheed Martin directly infringe upon the patent applications detailed

ISBN 9781971481296

below.

2. **Request for Compensation:** Because the government holds a free license to this portfolio, our request for compensation is a formal legal demand that the DoD immediately cease compensating Lockheed Martin for the licensed intellectual property.

3. **Citation of Patents:** The infringed applications include USPTO 19/639,219; 19/560,038; 19/562,838; and 19/562,845.

4. **Identification of Procurements:** See Section III below for the specific systems and contracting activities.

5. **Element-by-Element Comparison:** The required claim maps demonstrating precisely how the representative claims map to the accused software and processes are attached to this verified transmission.

III. Technological Nexus and Targeted Procurements

Lockheed Martin's most critical modernization efforts intersect directly with our proprietary claims, making their government contracts highly susceptible to this administrative review.

A. F-35 Technology Refresh 3 (TR-3) and the Integrated Core Processor

Responsible Activity: F-35 Joint Program Office (JPO)

The TR-3 upgrade is designed to modernize the computational core of the F-35 via a new L3Harris integrated core processor and a new aircraft memory unit, promising a 25x computing increase. Attempting to achieve this massive increase in computational throughput within the strict thermal and weight constraints of an airborne fighter requires abandoning traditional electrical data buses.

- **USPTO 19/560,038 (Optical Computing Architecture) & USPTO 19/562,838 (Energy-Efficient Computing via Clock Speed Reduction):** These patents define a holistic data fabric that replaces electrical I/O bottlenecks with a massively parallel optical interconnect, enabling a reduction in clock speed while maintaining high throughput. Any TR-3 processor upgrades utilizing internal optical data buses to mitigate thermal output directly infringe upon these hardware claims.

- **USPTO 19/639,219 (Central Processing Unit Architecture for Native Parametric and Symbolic Computation):** Upgrading the F-35's core processing capabilities to handle

ISBN 9781971481296

advanced sensor fusion natively relies upon our parametric high-radix architecture.

B. Strategic Quantum Computing and QML Partnerships

Responsible Activity: Lockheed Martin Research and Technology / Defense Innovation Unit (DIU)

Target Leadership: Craig Martell (CTO) and Valerie Browning (VP, Research & Technology)

Lockheed Martin is aggressively pursuing quantum technologies for aerospace and defense, recently signing strategic collaborations with PsiQuantum (November 2025), Xanadu (February 2026), and Fujitsu (February 2026). These partnerships focus on deploying fault-tolerant quantum algorithms, Quantum Machine Learning (QML), and dual-use AI/ML edge computing.

- **USPTO 19/562,845 (Physically Disaggregated Computing Systems):** To achieve the hybrid quantum-classical workflows required by these new partnerships, Lockheed Martin must utilize a disaggregated architecture where classical GPUs and quantum processing units (QPUs) are segregated yet interconnected via an ultra-high-bandwidth data fabric. This exact hybrid integration model is legally encumbered by our portfolio.

IV. Statutory and Ethical Mandates

Because Lockheed Martin operates as a publicly traded corporate entity bound by strict compliance and ethical frameworks, we must formally remind your corporate leadership and legal counsel of the following obligations:

1. SEC Disclosure Requirements for Public Companies

For Lockheed Martin Corporation, we remind you that if you find yourselves potentially infringing any of the Inventions covered in this intellectual property portfolio, you are legally obligated to assess whether it is necessary to notify your investors and file a material risk disclosure notice with the Securities and Exchange Commission (SEC). The failure to disclose a material intellectual property encumbrance that threatens your core aerospace platforms (such as the F-35) constitutes a severe breach of fiduciary duty.

2. Attorney Ethical Obligations (Model Rule 8.3)

A direct reminder is issued to the Chief Legal Officers, General Counsels, and all retained outside counsel receiving or reviewing this notice (including Kevin J. O'Connor): You are strictly bound by your ethical obligations, including ABA Model Rule of Professional Conduct 8.3. You maintain an affirmative obligation to report any unprivileged knowledge of wrongdoing that raises a substantial question as to a lawyer's honesty, trustworthiness, or fitness. If your internal audits reveal evidence of coordinated intellectual property theft or procurement fraud that

ISBN 9781971481296

may compromise the integrity of a court, you are ethically mandated to report such conduct to the appropriate professional authorities.

V. Immutable Audit Trail and Mandatory Administrative Action

This formal claim is delivered via Registered Email (RPost). This service provides an immutable, cryptographically verified audit trail, including proof of delivery, message content, and the exact official time of sending and opening.

As warranted Procuring Contracting Officers, if you receive cryptographically verified proof that a contractor is charging the government for freely available intellectual property, your failure to initiate an audit or halt payments leaves a permanent digital footprint of your inaction. This exposes you to severe administrative and potentially criminal liability for complicity in procurement fraud.

Pursuant to federal acquisition regulations, you are hereby mandated to freeze approvals related to the disputed intellectual property, halt the assumption of clear title for the F-35 TR-3 upgrades, and forward this communication immediately to the Intellectual Property Law Division of your respective branches.

V/R,

Reinaldo Aguiar Marcano

DEAR:

Mr. Creech, Ms. Steele, Ms. Jenkins, Mr. Robinson, Ms. Winnert, Mr. Elliott, and the AFLCMC

ISBN 9781971481296

Contracting Office,

This comprehensive technical and legal brief is served upon you in your official capacities as warranted Procuring Contracting Officers (PCOs) and Directors within the United States Department of Defense (DoD).

This document constitutes a formal Administrative Claim for Patent Infringement under the Defense Federal Acquisition Regulation Supplement (DFARS) 227.7004.[1] The purpose of this claim is to notify the United States Government of a highly anomalous and legally precarious situation involving the unauthorized commercialization of a foundational patent portfolio by major defense contractors—namely Palantir Technologies and Anduril Industries.[1]

I. The Jurisprudential Paradox: Eminent Domain vs. The Perpetual License

Under standard operating procedures defined by 28 U.S.C. § 1498, the United States Government exercises eminent domain over domestic patents, shielding its defense contractors from civil injunctions and assuming financial liability for infringement.[1]

However, the situation at hand introduces a critical jurisprudential paradox. The inventor of the Aguiar Marcano Intellectual Property Portfolio—which comprises 52 foundational patent applications published defensively in *The Architecture of Control* (ISBN 978-1-97-148129-6)—has proactively granted an irrevocable, perpetual, no-fee license to the federal government for all national defense purposes.[1] Consequently, the U.S. Government owes absolutely no royalties for the utilization of these systems.[1]

The legal friction immediately shifts. Defense contractors (Palantir and Anduril) are currently utilizing these specific patented architectures and subsequently embedding the research, development, and licensing costs of these technologies into their multi-billion-dollar government contracts.[1] They are effectively charging the American taxpayer for intellectual property that the government already possesses the legal right to utilize indefinitely and without cost.[1]

This scenario transcends standard patent infringement; it borders on procurement fraud, waste, and abuse of federal funds.[1] Failing to halt the disbursement of funds to these contractors for pre-licensed intellectual property constitutes complicity in corporate intellectual property theft and a gross mismanagement of taxpayer dollars.[1]

II. Satisfaction of DFARS 227.7004 Administrative Claim Requirements

ISBN 9781971481296

To compel immediate administrative intervention, this communication strictly adheres to the requirements of DFARS 227.7004(a) and (b):[1]

1. **Allegation of Infringement:** We formally allege that the systems provided by Palantir Technologies and Anduril Industries directly infringe upon the patent applications detailed below.[1]
2. **Request for Compensation:** Because the government holds a free license to this portfolio, our request for compensation is a formal legal demand that the DoD immediately cease compensating the infringing contractors for the licensed intellectual property.[1]
3. **Citation of Patents:** The infringed applications include USPTO 19/639,219; 19/640,945; 19/560,038; 19/560,065; 19/559,957; 19/559,873; and 19/559,842.[1]
4. **Identification of Procurements:** See Section III below for the specific systems and contracting activities.[1]
5. **Element-by-Element Comparison:** The required claim maps demonstrating precisely how the representative claims map to the accused software and processes are attached to this verified transmission.[1]

III. Technological Nexus and Targeted Procurements

The operational methodologies of Palantir Technologies and Anduril Industries intersect directly with these proprietary claims, making their government contracts highly susceptible to this administrative review.[1]

A. Palantir Technologies (Project TITAN & Project Maven)

Responsible Activities: Army Contracting Command - APG (Belvoir Division) & National Geospatial-Intelligence Agency / CDAO[1] **Notified PCOs/Directors:** William A. Creech, Mia A. Steele, Tamara N. Jenkins, Undra Robinson, Emely Winnert, and Jonathan Elliott.[1]

Palantir's flagship platforms, Gotham and Foundry, specialize in integrating massive datasets to construct complex dependency graphs utilized by intelligence agencies.[1]

- **USPTO 19/559,957 (Power Holder Analysis in Social Networks):** Palantir's analytical methodologies for Project TITAN and Project Maven directly mirror our systemic method for analyzing network dependency graphs to identify indispensable bottlenecks.[1]
- **USPTO 19/559,873 (Information Leak-Proofing of Organizations):** Palantir's internal security infrastructure infringes upon our method of calculating precise "blast radius" vulnerability scores for individual users.[1]

ISBN 9781971481296

B. Anduril Industries (Collaborative Combat Aircraft & Ghost Drones)

Responsible Activities: Air Force Life Cycle Management Center (AFLCMC) & U.S. Special Operations Command (USSOCOM)[1] **Notified PCOs:** AFLCMC General Contracting Office[1]

Anduril relies heavily on Lattice OS to formulate a real-time command and control center for autonomous systems.[1]

- **USPTO 19/559,842 (Coordinated Dual-Vehicle Scanning):** The deployment of autonomous, multi-modal surveillance systems operating in tandem is heavily encumbered by our patent, which explicitly claims the methodology for coordinating multiple scanning vehicles via a secure link to fuse multi-spectral data.[1]
- **USPTO 19/560,065 (Autonomous Robotic Data Logistics):** Anduril's operations in contested environments intersect directly with our claimed mechanisms for using autonomous robotic units to physically retrieve and transport high-capacity data payloads.[1]

IV. Immutable Audit Trail and Mandatory Administrative Action

This formal claim is delivered via Registered Email (RPost). This service provides an immutable, cryptographically verified audit trail, including proof of delivery, message content, and the exact official time of sending and opening.[1]

By delivering this DFARS-compliant claim via RPost, we establish undeniable "Actual Notice" under 35 U.S.C. § 154(d).[1] More importantly, this verified delivery strips the targeted military and civilian agencies of "plausible deniability."[1]

As warranted Procuring Contracting Officers, if you receive cryptographically verified proof that a contractor is charging the government for freely available intellectual property, your failure to initiate an audit or halt payments leaves a permanent digital footprint of your inaction.[1] This exposes you, as individual officials, to severe administrative, ethical, and potentially criminal liability for gross negligence, dereliction of duty, or complicity in procurement fraud.[1]

Pursuant to federal acquisition regulations, you are hereby mandated to halt the assumption of clear title, freeze approvals related to the disputed intellectual property, and forward this communication immediately to the Chief of the Intellectual Property Law Division (JALS-IP) within your respective military branches.[1]

Govern yourselves accordingly.

REGISTERED EMAIL™ | CERTIFIED DELIVERY

This is a Registered Email™ message from **RJ Aguiar**.

Dear Mr. Stanley, Secretary Hegseth, and Mr. Michael:

This comprehensive administrative and technical disclosure is officially executed and served upon you in your formal capacities within the United States Department of Defense (DoD). This document constitutes a new, unified **Formal Administrative Claim for Patent Infringement under DFARS 227.7004**, a **Notice of Perpetual No-Fee License Grant**, and a formal **Notice of Potential Retaliatory Mechanisms** intersecting with critical defense procurement infrastructure.

I. Formal Administrative Claim under DFARS 227.7004: JADC2 Tactical Nexus

We formally allege that the Joint All-Domain Command and Control (JADC2) architectures, satellite communications, troposcatter modules, point-to-point radio frequency (RF) frameworks, and cryptographic data fabrics currently being commercialized and deployed by **Lockheed Martin Corporation**—and integrated alongside cloud architectures managed by **Microsoft Azure**, **Amazon AWS**, **Palantir Technologies**, and **Anduril Industries**—directly infringe upon the foundational patent applications compiled within the Aguiar Marcano Intellectual Property Portfolio (ISBN 9781971481296).

The targeted procurements natively intersect with the following core tracks of the **JADC2 data fabric** and distributed telecommunications arrays:

A. The Cryptographic Paradigm Shift: Elimination of the "Key-First" Bottleneck

Modern tactical networks are fundamentally constrained by sequential, "key-first" handshakes (e.g., traditional TLS/SSL frameworks), making them highly vulnerable to real-time Man-in-the-Middle (MITM) interception and traffic analysis. The following inventions completely render the legacy binary "key-first" paradigm obsolete by decoupling the data payload from synchronous key exchanges:

- **USPTO # 19/645,371 (Secure Communication via Receiver-Generated Key Seeds):** Inverts the traditional key exchange by having the intended receiver generate and push single-use key seeds over an uplink, ensuring the final message encryption key is never transmitted across the vulnerable downlink channel.

- **USPTO # 19/640,945 (Asynchronous Secure Communication with Post-Hoc Key Derivation):** Breaks temporal predictability by splitting transmissions into three asynchronous parts (Prefix, Message, Suffix) across separate paths, deriving the final decryption key post-hoc only after complete block concatenation.
- **USPTO # 19/658,570 (Geographical and Orientation-Based Encryption Seeds):** Utilizes real-time GNSS coordinates and IMU digital compass orientations relative to Magnetic North as continuous, high-fidelity physical entropy sources to generate keys immune to timestamp-based prediction.
- **USPTO # 19/640,973 & # 19/561,259 (Secure Parametric Network Protocol with Rotating Encoding Maps):** Enforces end-to-end forward secrecy across routed, multi-hop networks by utilizing disposable, time-variant encoding maps that rotate mid-session based on packet thresholds, preventing retrospective decryption of captured traffic.
- **USPTO # 19/658,572 (System and Method for Encrypted Keyboard Events):** Encrypts each individual keystroke event independently as a distinct ciphertext, defeating acoustic side-channel leaks and machine-learning-driven text structure analysis.

B. High-Radix, Post-Binary Tactical Communications

- To bypass the bandwidth and physical bottlenecks of serial binary serialization, the following technologies define a native, high-radix physical and data-link layer, processing abstract mathematical "recipes" and symbolic multi-state signals instead of standard bits:
- **USPTO # 19/639,265 (High-Radix and Parametric Satellite Communication System):** Modulates Earth-to-space and space-to-Earth RF links into N discrete, distinguishable physical states ($N > 2$) to optimize satellite transponder throughput.
- **USPTO # 19/639,272 (Adaptive High-Radix and Parametric Troposcatter Communication System):** Dynamically adjusts the channel radix (N) in real-time based on tropospheric fading and multipath metrics, scaling data density constructively.
- **USPTO # 19/639,255 (High-Radix and Parametric Cellular Communication System):** Implements post-binary symbolic data transport across wireless cellular segments natively.
- **USPTO # 19/639,258 (High-Radix and Parametric Point-to-Point RF Communication System):** Establishes fixed, line-of-sight wireless backhaul links operating on high-cardinality symbol maps.
- **USPTO # 19/638,466 (Secure Communication Using Covert Side-Channels Embedded in a High-Cardinality Stream):** Embeds logical side-channels (e.g., spatial positioning) within a primary optical or RF stream, phase-shifting key data relative to the primary payload via a pseudo-random offset.

C. Advanced Cryptanalysis, Data Logistics, and Signal De-Anonymization

- **USPTO # 19/645,192 (Accelerated Prime Number Generation via Modular Signal Analysis):** Partitions massive integer space into shards, mapping remainders to multi-state digital signals to detect "prime oases" and accelerate key generation.
- **USPTO # 19/645,194 (Cryptanalysis Based on Parametric Denoising of a Public Key):** Treats a public key as a noisy signal, applying parameterized modular filters to eliminate "impossible overlaps" and rapidly isolate prime factors.
- **USPTO # 19/559,656 (Covert Communication via Satellite Vision Systems):** Utilizes synchronized ground arrays to embed data-rich visual patterns directly into the imagery captured by non-cooperative orbital observation platforms.
- **USPTO # 19/559,972 (Communication via Passive Reflection from Non-Cooperative Orbiting Objects):** Employs an automated kinematic engine to map Low Earth Orbit (LEO) satellite trajectories, using their physical chassis as passive RF mirrors to bounce over-the-horizon signals without their active participation.
- **USPTO # 19/559,608 (Method and System for a Geo-Indexing Covert Ledger):** Formulates an identity-agnostic distributed ledger by encoding transactional units as out-of-range coordinate transformations mapped directly to public real estate metadata.
- **USPTO # 19/571,566 (De-Anonymizing Radio Frequency Signals via a Distributed Sensor Array):** Analyzes Time of Arrival (ToA) differentials across an array of passive sensors to derive precise directional vectors, matching transmissions with telecom provider event logs to de-anonymize encrypted streams.

II. Notice of Perpetual, Irrevocable Grant to the U.S. Federal Government

As explicitly hardcoded within the legal text of the underlying patent applications (compiled under ISBN

9781971481296), the Primary Inventor has proactively executed a **perpetual, irrevocable, worldwide, royalty-free, non-exclusive license grant** to the United States Federal Government and its defense and national security components for all sovereign defense purposes.
Because the U.S. Government possesses an absolute, zero-cost right to practice, implement, and deploy these high-radix and parametric cryptographic architectures natively, the financial implications for the national defense budget are substantial. The Department is legally unencumbered by private commercial royalty streams for any systems utilizing these "recipes" for JADC2 data-routing optimization.

III. Notice of Potential Retaliatory Mechanisms & Sovereign Interception Risks

Pursuant to the clinical logs detailed in *"The Capias and the F-35 Program"* (ISBN 9781105250286), a severe chronological alignment exists between the submission of formal DFARS disclosures and the immediate deployment of localized penal mechanisms.

Chronological Causality Tracking: On April 17, 2026, the Primary Inventor transmitted formal DFARS 227.7004 claims to the Pentagon. On the immediate next business day (April 21, 2026), adversarial counsel representing local domestic relations tracks abruptly accelerated a highly anomalous property discovery track. This track explicitly targeted the forced conversion and physical surrender of the independent corporate computing hardware containing the primary source-code keys to these exact patent applications.

Because these private actors are deeply intertwined with cloud, analytical, and logistics infrastructure managed across prime defense contractors—including **Palantir**, **Anduril**, **Lockheed Martin**, **Microsoft Azure**, and **Amazon AWS**—any un-audited attempt to seize or compromise the physical hardware holding these cryptographic source keys introduces a severe risk of data spoliation, unauthorized tech-transfer, and a direct threat to the financial and technological sovereignty of the U.S. government's pre-licensed asset.

IV. Constructive Requisition for a Procurement Audit

This notice is submitted in a constructive, non-adversarial posture designed explicitly to safeguard the integrity of the Department, the taxpayers, and the defense industrial base. It is in the shared interest of all stakeholders—including the defense primes—to ensure complete regulatory clarity.

If prime contractors are embedding the research, development, or licensing costs of these high-radix, post-binary, or asynchronous communication mechanisms into multi-billion-dollar federal procurement tracks, the government is effectively being billed for intellectual property it already holds a free, perpetual license to utilize.

Therefore, we respectfully request that the **Chief Digital and Artificial Intelligence Office (CDAO)**, alongside the **Intellectual Property Law Division (JALS-IP)**, initiate a targeted procurement audit of active JADC2 and communication modernized contracts to verify cost-accounting lines, enforce compliance with the government's native license, and protect the public archives from asymmetric exploitation.

Respectfully submitted,

Reinaldo J. Aguiar Marcano
Primary Inventor / Relator Pro Se

RE: ACTUAL KNOWLEDGE OF PATENT INFRINGEMENT (35 U.S.C. § 154(d)), INITIATION OF DFARS 227.7004 ADMINISTRATIVE CLAIM, AND NOTIFICATION OF POTENTIAL PROCUREMENT FRAUD BY LOCKHEED MARTIN CORPORATION

DATE: April 17, 2026

DELIVERY METHOD: Cryptographically Verified via Registered Email (RPost)

DEAR:

Lt. Gen. Schmidt and the F-35 JPO Contracting Directorate,

ISBN 9781971481296

This comprehensive technical and legal brief is served upon you in your official capacities within the United States Department of Defense (DoD).

This document constitutes a formal Administrative Claim for Patent Infringement under the Defense Federal Acquisition Regulation Supplement (DFARS) 227.7004. The purpose of this claim is to notify the United States Government of a highly anomalous and legally precarious situation involving the unauthorized commercialization of a foundational patent portfolio by Lockheed Martin Corporation.

I. THE U.S. DEPARTMENT OF DEFENSE LICENSE GRANT AND STRATEGIC BLOCKADE

Under standard operating procedures defined by 28 U.S.C. § 1498, the United States Government exercises eminent domain over domestic patents, shielding its defense contractors from civil injunctions and assuming financial liability for infringement.

However, the inventor of the Aguiar Marcano Intellectual Property Portfolio—which comprises 52 foundational patent applications published defensively in *The Architecture of Control* (ISBN 978-1-97-148129-6)—has proactively granted an irrevocable, perpetual, no-fee license to the federal government for all national defense purposes. The United States Department of Defense, specifically through Under Secretary of Defense Emil Michael, has been placed on direct notice of this license grant and is the designated authority administering this license on behalf of the military.

Lockheed Martin is currently utilizing these specific patented architectures to overcome severe computational bottlenecks in their aerospace and quantum programs. By embedding the research, development, and licensing costs of these technologies into multi-billion-dollar government contracts, Lockheed Martin is effectively charging the American taxpayer for intellectual property that the government already possesses the legal right to utilize indefinitely and without cost. Failing to halt the disbursement of funds to this contractor for pre-licensed intellectual property constitutes a gross mismanagement of taxpayer dollars.

II. Satisfaction of DFARS 227.7004 Administrative Claim Requirements

To compel immediate administrative intervention, this communication strictly adheres to the requirements of DFARS 227.7004(a) and (b):

1. **Allegation of Infringement:** We formally allege that the systems provided and developed by Lockheed Martin directly infringe upon the patent applications detailed

ISBN 9781971481296

below.

2. **Request for Compensation:** Because the government holds a free license to this portfolio, our request for compensation is a formal legal demand that the DoD immediately cease compensating Lockheed Martin for the licensed intellectual property.

3. **Citation of Patents:** The infringed applications include USPTO 19/639,219; 19/560,038; 19/562,838; and 19/562,845.

4. **Identification of Procurements:** See Section III below for the specific systems and contracting activities.

5. **Element-by-Element Comparison:** The required claim maps demonstrating precisely how the representative claims map to the accused software and processes are attached to this verified transmission.

III. Technological Nexus and Targeted Procurements

Lockheed Martin's most critical modernization efforts intersect directly with our proprietary claims, making their government contracts highly susceptible to this administrative review.

A. F-35 Technology Refresh 3 (TR-3) and the Integrated Core Processor

Responsible Activity: F-35 Joint Program Office (JPO)

The TR-3 upgrade is designed to modernize the computational core of the F-35 via a new L3Harris integrated core processor and a new aircraft memory unit, promising a 25x computing increase. Attempting to achieve this massive increase in computational throughput within the strict thermal and weight constraints of an airborne fighter requires abandoning traditional electrical data buses.

- **USPTO 19/560,038 (Optical Computing Architecture) & USPTO 19/562,838 (Energy-Efficient Computing via Clock Speed Reduction):** These patents define a holistic data fabric that replaces electrical I/O bottlenecks with a massively parallel optical interconnect, enabling a reduction in clock speed while maintaining high throughput. Any TR-3 processor upgrades utilizing internal optical data buses to mitigate thermal output directly infringe upon these hardware claims.

- **USPTO 19/639,219 (Central Processing Unit Architecture for Native Parametric and Symbolic Computation):** Upgrading the F-35's core processing capabilities to handle

ISBN 9781971481296

advanced sensor fusion natively relies upon our parametric high-radix architecture.

B. Strategic Quantum Computing and QML Partnerships

Responsible Activity: Lockheed Martin Research and Technology / Defense Innovation Unit (DIU)

Target Leadership: Craig Martell (CTO) and Valerie Browning (VP, Research & Technology)

Lockheed Martin is aggressively pursuing quantum technologies for aerospace and defense, recently signing strategic collaborations with PsiQuantum (November 2025), Xanadu (February 2026), and Fujitsu (February 2026). These partnerships focus on deploying fault-tolerant quantum algorithms, Quantum Machine Learning (QML), and dual-use AI/ML edge computing.

- **USPTO 19/562,845 (Physically Disaggregated Computing Systems):** To achieve the hybrid quantum-classical workflows required by these new partnerships, Lockheed Martin must utilize a disaggregated architecture where classical GPUs and quantum processing units (QPUs) are segregated yet interconnected via an ultra-high-bandwidth data fabric. This exact hybrid integration model is legally encumbered by our portfolio.

IV. Statutory and Ethical Mandates

Because Lockheed Martin operates as a publicly traded corporate entity bound by strict compliance and ethical frameworks, we must formally remind your corporate leadership and legal counsel of the following obligations:

1. SEC Disclosure Requirements for Public Companies

For Lockheed Martin Corporation, we remind you that if you find yourselves potentially infringing any of the Inventions covered in this intellectual property portfolio, you are legally obligated to assess whether it is necessary to notify your investors and file a material risk disclosure notice with the Securities and Exchange Commission (SEC). The failure to disclose a material intellectual property encumbrance that threatens your core aerospace platforms (such as the F-35) constitutes a severe breach of fiduciary duty.

2. Attorney Ethical Obligations (Model Rule 8.3)

A direct reminder is issued to the Chief Legal Officers, General Counsels, and all retained outside counsel receiving or reviewing this notice (including Kevin J. O'Connor): You are strictly bound by your ethical obligations, including ABA Model Rule of Professional Conduct 8.3. You maintain an affirmative obligation to report any unprivileged knowledge of wrongdoing that raises a substantial question as to a lawyer's honesty, trustworthiness, or fitness. If your internal audits reveal evidence of coordinated intellectual property theft or procurement fraud that

ISBN 9781971481296

may compromise the integrity of a court, you are ethically mandated to report such conduct to the appropriate professional authorities.

V. Immutable Audit Trail and Mandatory Administrative Action

This formal claim is delivered via Registered Email (RPost). This service provides an immutable, cryptographically verified audit trail, including proof of delivery, message content, and the exact official time of sending and opening.

As warranted Procuring Contracting Officers, if you receive cryptographically verified proof that a contractor is charging the government for freely available intellectual property, your failure to initiate an audit or halt payments leaves a permanent digital footprint of your inaction. This exposes you to severe administrative and potentially criminal liability for complicity in procurement fraud.

Pursuant to federal acquisition regulations, you are hereby mandated to freeze approvals related to the disputed intellectual property, halt the assumption of clear title for the F-35 TR-3 upgrades, and forward this communication immediately to the Intellectual Property Law Division of your respective branches.

V/R,

Reinaldo Aguiar Marcano

Date: May 7, 2026

Subject: Notice of Potential Infringement of U.S. Patent Applications and Notice of Actual Knowledge

Dear Mr. Harris and Mr. Cardaci,

This letter serves as a formal notice of potential infringement of several of my U.S. patent applications. It has come to my attention that activities associated with Space Exploration Technologies Corp. ("SpaceX"), particularly regarding its satellites and devices used to launch said satellites, may be infringing upon my intellectual property rights.

The following U.S. patent applications, among others in my portfolio, are believed to be relevant to these activities:

- **USPTO Application No. 19/559,745:** System and Method for Covert Communication Using Arrangements of Satellite-Observable, Distinctively Colored Objects
- **USPTO Application No. 19/559,656:** Method for Covert Communication via Satellite Vision Systems
- **USPTO Application No. 19/639,265:** A High-Radix and Parametric Satellite Communication System
- **USPTO Application No. 19/559,972:** METHOD AND SYSTEM FOR COMMUNICATION VIA PASSIVE REFLECTION FROM NON-COOPERATIVE ORBITING OBJECTS
- **USPTO Application No. 19/658,570:** METHOD AND SYSTEM FOR GEOGRAPHICAL AND ORIENTATION-BASED ENCRYPTION SEEDS

These applications describe novel methods and systems for satellite communication, covert signaling, and encryption. Given the nature of SpaceX's operations, there is a strong basis to believe that technologies infringing upon one or more of these pending patents are being employed.

Furthermore, please be advised that attached to this email is the complete portfolio of my inventions, which has also been published in a printed book under the title "ISBN 9781971481296 Portfolio of Patent Applications Submitted to the USPTO." This transmission constitutes a formal Notice of Actual Knowledge of the entire contents of the attached book and the patent applications contained therein.

This letter serves as a good faith effort to inform SpaceX of my intellectual property rights. I am open to discussing licensing terms for the use of my patented technologies. As a condition of any such license, I would require that the nexus properties (satellites and launch devices) be clearly and publicly marked with the corresponding USPTO Patent Application number(s) or my name as the inventor. The marking must be placed in public view and occupy at least 3% of the visible surface of the property.

I expect a prompt and substantive response to this notice within fifteen (15) business days. Failure to respond may result in further legal action to protect my intellectual property rights.

This letter is not a complete statement of my rights in connection with this matter and is without prejudice to any of my rights and remedies, all of which are hereby expressly reserved.

Sincerely,

s/Reinaldo Aguiar Marcano/

To: The European Patent Office
Attn: Directorate-General 1 (Patent Granting Process)
ICT Technical Cluster / Computing Division
80298 Munich, Germany

Date: April 7, 2026

Dear Vice President Rowan and Director Philpott,

I am writing to you in my capacity as a technologist, former Google Search Ranking engineer, and recognized political refugee under the 1951 Refugee Convention. This letter serves as form foundational body of intellectual property that has been placed into the public domain as a **defensive publication** to establish definitive prior art in the fields of high-performance computing, communications, and optical data transmission.

1. Scope of the Disclosure The published portfolio, titled *"Be Water, Be Light: Portfolio of Patent Applications Submitted to the USPTO"* (ISBN: 978-1-97-148129-6), documents a compreh architecting of computing infrastructure. Key technical disclosures include:

- **High-Radix Physical Layer Encoding:** A method for post-binary data representation using N discrete physical states (N>2).
- **Optically-Native CPU Architecture:** A system for native parametric and symbolic computation that eliminates premature numerical evaluation and fixed-width binary bottlenecks.
- **Massively Parallel Optical Interconnects:** A "photon-native" solution for data transmission using light frames where each pixel acts as an independent channel, enabling terabit-per-s
- **Disaggregated Data Centers:** Methods for dynamically composing bare-metal computer resources from independent pools of CPUs and memory via an optical fabric.

2. Legal Priority and Public Record The thirty-three patent applications compiled in this record were formally filed with the United States Patent and Trademark Office (USPTO) between M **March 9, 2026**. This technical record pre-dates current filing cycles for advanced satellite constellations and AI-optimized semiconductor architectures initiated in the second quarter of 2026 (ISBN: 978-1-97-148129-6) was accepted for publication on the yearly journal "The International Journal of Law, Ethics, and Technology" (please see acceptance email below).

3. Strategic National Security Status Recognizing the foundational nature of these inventions for quantum computing clusters and national defense, I have granted a **perpetual, no-fee, wo** to the United States Federal Government for all governmental and defense purposes. This effectively designates this IP as a strategic asset.

4. Request for Action Under the provisions of the European Patent Convention regarding the search for **Non-Patent Literature (NPL)**, I request that this 721-page specification be indexed v internal databases. This will ensure that your examiners, particularly within Technical Clusters **G06F** and **H04L**, cite this work as prior art during the examination of any applications related to high-radix computing, or satellite-to-ground covert communications.

Be advised that major international legal representatives (including **Quinn Emanuel Urquhart & Sullivan**) have been formally notified of this disclosure and its implications for the product r clients in the semiconductor and telecommunications sectors.
I remain available to provide the full high-resolution digital version of record to your technical reviewers upon request.

Respectfully,

Reinaldo J. Aguiar Marcano
Forensic Systems Architect

Dear Vice President Rowan and Director Philpott,

I am writing to you in my capacity as a technologist, former Google Search Ranking engineer, and recognized political refugee under the 1951 Refugee Convention. This letter serves as formal notice of a foundational body of intellectual property that has been placed into the public domain as a **defensive publication** to establish definitive prior art in the fields of high-performance computing, satellite communications, and optical data transmission.

1. Scope of the Disclosure The published portfolio, titled *"Be Water, Be Light: Portfolio of Patent Applications Submitted to the USPTO"* (ISBN: 978-1-97-148129-6), documents a comprehensive re-architecting of computing infrastructure. Key technical disclosures include:

- **High-Radix Physical Layer Encoding:** A method for post-binary data representation using N discrete physical states (N>2).
- **Optically-Native CPU Architecture:** A system for native parametric and symbolic computation that eliminates premature numerical evaluation and fixed-width binary bottlenecks.
- **Massively Parallel Optical Interconnects:** A "photon-native" solution for data transmission using light frames where each pixel acts as an independent channel, enabling terabit-per-second throughput.

- **Disaggregated Data Centers:** Methods for dynamically composing bare-metal computer resources from independent pools of CPUs and memory via an optical fabric.

2. Legal Priority and Public Record The thirty-three patent applications compiled in this record were formally filed with the United States Patent and Trademark Office (USPTO) between **March 6 and March 9, 2026.** This technical record pre-dates current filing cycles for advanced satellite constellations and AI-optimized semiconductor architectures initiated in the second quarter of 2026**.** This publication (ISBN: 978-1-97-148129-6) was accepted for publication on the yearly journal "The International Journal of Law, Ethics, and Technology" (please see acceptance email below).

3. Strategic National Security Status Recognizing the foundational nature of these inventions for quantum computing clusters and national defense, I have granted a **perpetual, no-fee, worldwide license** to the United States Federal Government for all governmental and defense purposes. This effectively designates this IP as a strategic asset.

4. Request for Action Under the provisions of the European Patent Convention regarding the search for **Non-Patent Literature (NPL).** I request that this 721-page specification be indexed within the EPO's internal databases. This will ensure that your examiners, particularly within Technical Clusters **G06F** and **H04L**, cite this work as prior art during the examination of any applications related to optical buses, high-radix computing, or satellite-to-ground covert communications.

Be advised that major international legal representatives (including **Quinn Emanuel Urquhart & Sullivan**) have been formally notified of this disclosure and its implications for the product roadmaps of their clients in the semiconductor and telecommunications sectors.
I remain available to provide the full high-resolution digital version of record to your technical reviewers upon request.

Respectfully,

Reinaldo J. Aguilar Marcano

This Registered Receipt™ email is verifiable proof of your Registered Email™ transaction. It contains:

1. An official time stamp.
2. Proof that your message was sent and to whom it was sent.
3. Proof that your message was delivered to its addressees or their authorized electronic agents.
4. Proof of the content of your original message and all of its attachments.

Note: By default, RPost does not retain a copy of your email or this receipt and you should not rely on the information above until the receipt is verified by the RMail system. Keep this email and its attachment in place for your records. General terms and conditions are available at Legal Notice. RMail services are patented, using RPost patented technologies, including US patents 8209389, 8224913, 8468199, 8161104, 8468198, 8504628, 7966372, 6182219, 6571334 and other US and non-US patents listed at RPost Communications.

Receipt: [Lockheed-Martin] FORMAL ADMINISTRATIVE CLAIM FOR PATENT INFRINGEMENT UNDER DFARS 227.7004 AND NOTIFICATION OF PROCUREMENT IRREGULARITIES CONCERNING PERPETUALLY LICENSED TECHNOLOGIES (Delivery Failure)

1 message

Receipt <receipt@r1.rpost.net> Fri, Apr 17, 2026 at 11:54 AM
To: rj.aguiar.m+legal-notice@gmail.com

REGISTERED RECEIPT
EVIDENCE OF DELIVERY, CONTENT & TIME
RMail

This receipt contains verifiable proof of your RPost transaction.
The holder of this receipt has proof of delivery, message and attachment content, and official time of sending and receipt. Depending on services selected, the holder also may have proof of encrypted transmission and/or electronic signature.

To authenticate this receipt, forward this email with its attachment to 'verify@r1.rpost.net' or click here

This Registered Receipt™ email is verifiable proof of your Registered Email™ transaction. It contains:

1. An official time stamp.
2. Proof that your message was sent and to whom it was sent.
3. Proof that your message was delivered to its addressees or their authorized electronic agents.
4. Proof of the content of your original message and all of its attachments.

Note: By default, RPost does not retain a copy of your email or this receipt and you should not rely on the information above until the receipt is verified by the RMail system. Keep this email and its attachment in place for your records. General terms and conditions are available at Legal Notice. RMail services are patented, using RPost patented technologies, including US patents 8209389, 8224913, 8468199, 8161104, 8468198, 8504628, 7966372, 6182219, 6571334 and other US and non-US patents listed at RPost Communications.

REGISTERED EMAIL™ | CERTIFIED DELIVERY

This is a Registered Email™ message from **RJ Aguiar**.

Dear Mr. Stanley, Deputy Secretary Feinberg, and Secretary Hegseth,

CLARIFYING DECLARATION OF STRUCTURAL SCOPE & SEPARATION CRITICAL NOTICE OF ADMINISTRATIVE BOUNDARY

This administrative filing is entirely separate and legally distinct from any prior claims submitted regarding aerospace platform integrators or operational logistics networks (including Lockheed Martin Corporation, Palantir Technologies, or Anduril Industries).

This submission targets a fundamental structural bottleneck: **the underlying hardware processing layers, high-radix microelectronics, and architectural computing assumptions deployed inside the Department's centralized heavy-compute initiatives.**

The sole targets of this specific patent infringement inquiry and technical sovereignty review are **NVIDIA Corporation** and **Intel Federal LLC**. Previous administrative filings are referenced herein exclusively to preserve chronological data continuity and formal notice trails.

I. TIERED ACTION LINE & OVERSIGHT ROUTING

To prevent the administrative dilution of responsibility and establish absolute accountability regarding a multi-billion-dollar technology footprint, the delivery layout of this document is tiered strictly by statutory duty:

- **Programmatic & Technical Intake Execution:** Directed to **Mr. Cameron Stanley**, Chief Digital and Artificial Intelligence Officer (CDAO), as the primary operational authority over the Department's unified strategic agreements to scale advanced generative capabilities across classified networks.
- **Macro-Procurement & Supply Chain Integrity:** Directed to **Deputy Secretary Steve Feinberg**, as the Department's Chief Operating Officer, to evaluate systemic fiscal irregularities, hardware procurement tracking, and defense industrial base vulnerabilities.
- **Ultimate National Command Accountability:** Directed to **Secretary Pete Hegseth**, who holds ultimate statutory responsibility for maintaining the United States' asymmetric military and technological dominance.
- Affected semiconductor manufacturers, corporate counsels of record, and congressional oversight nodes are concurrently appended to the **CC** field to ensure absolute transparency and legislative awareness of the technical risks detailed below.

cc: emil.michael@mail.mil, jensen.huang@nvidia.com, lip-bu.tan@intel.com, investor.relations@intel.com, ir@nvidia.com, brian@anduril.com, akarp@palantir.com, kevin.j.oconnor@lmco.com, mike.rogers@mail.house.gov

II. THE CRITICAL NEXUS: COMPUTING POWER DOMINANCE VS. ADVERSARIAL ACQUISITION

This administrative claim expands beyond the localized boundaries of the Joint All-Domain Command and Control (JADC2) data fabric into a macro-strategic warning regarding **Global Computing Power Dominance**. The technical nexus of this claim is divided into two distinct strategic realities:

A. The Structural Obsolescence of Legacy Silicon

The heavy compute systems currently being scaled across the Department's classified networks—including NVIDIA Corporation's H100/B200 NVL74 Blackwell architectures and Intel Federal LLC's specialized microprocessor arrays—are bound to legacy, synchronous binary computing models. These legacy chips are approaching physical scaling limitations and are fundamentally constrained by copper bus layouts and traditional heat/power dissipation thresholds.

The proprietary architectures compiled within the *Aguiar Marcano Intellectual Property Portfolio* (ISBN 9781971481296) completely shift the physical and data-link layers into an **asynchronous, post-binary parametric model** utilizing ultra-wide data buses, high-radix computing, disaggregated computing arrays, and opticallynative hardware architectures.

B. The Asymmetric Decryption & Technology Capture Threat

The deployment of these high-radix optical computing architectures creates an immediate asymmetric threat vector to legacy DoD cryptography. Traditional frameworks operate on a "key-first" paradigm, requiring complete cryptographic handshake cycles to be synchronized before data moves.

Our portfolio renders this assumption obsolete by shifting computing into a post-binary parametric series. A computer built natively on these optical inventions possesses the mathematical cardinality and parallel throughput to execute brute-force decryption vectors that render legacy silicon-based secure communications obsolete.

The Asymmetric Geopolitical Threat Vector

The primary national security concern is not merely the commercial misappropriation of intellectual property by domestic contractors; it is **the risk of secondary adversarial implementation**.

Because the Primary Inventor has granted the United States Federal Government a **perpetual, irrevocable, worldwide, royalty-free, non-exclusive license** to practice these inventions natively for national defense, the U.S. military possesses an absolute, zero-cost right to construct and control this next-generation computing tier.

However, if a foreign state actor or peer adversary misappropriates these structural "recipes" and constructs a high-radix optical compute network *before* the Department of Defense transitions away from legacy silicon, the United States' military technological dominance will face a structural surprise. The encryption mechanisms protecting current multi-billion-dollar defense arrays could be completely compromised by an adversary operating on an optically-native computing layer.

III. SATISFACTION OF DFARS 227.7004 REQUISITES & PROPRIETARY ARCHITECTURES

We formally allege that the underlying computing frameworks, high-speed memory interfaces, and parallel routing arrays utilized by NVIDIA Corporation and Intel Federal LLC to fulfill CDAO strategic agreements directly replicate or infringe upon the following patent applications, with particular emphasis on the foundational optical signaling layer:

A. The Architectural Cornerstone

- **USPTO # 19/559,705:** High-Bandwidth, Low-Latency Optical Data Cable and Transmission Protocol *(The foundational interconnect mechanism rendering traditional copper data bus lane limits obsolete).*

B. High-Radix Processing & "Just-in-Time" Compute Fabrics

- **USPTO # 19/638,192:** Apparatus and Method for an Ultra-Wide Data Bus Architecture via Parametric Encoding
- **USPTO # 19/638,176:** Method and Apparatus for High-Radix Number Representation Using Parametric Series
- **USPTO # 19/638,180:** System and Method for High-Precision Fractional Number Representation in a Digital Computing System
- **USPTO # 19/639,219:** A Central Processing Unit Architecture for Native Parametric and Symbolic Computation
- **USPTO # 19/639,245:** A Method and System for High-Radix Physical Layer Data Encoding and Representation
- **USPTO # 19/639,222:** A Memory System for the Storage and Retrieval of Parametric and Symbolic Data Representations
- **USPTO # 19/639,271:** A High-Radix Mass Storage System
- **USPTO # 19/639,220:** Method and System for High-Radix Data Representation Using Parametric Mathematical Encoding
- **USPTO # 19/639,253:** A Protocol Stack and System for Parametric Data Networking

C. Massively Parallel Optical Interconnects & Native Hardware

- **USPTO # 19/560,041:** Apparatus and Method for Physical Transmission of Spatially-Encoded Optical Data
- **USPTO # 19/560,037:** Optical Memory Bus and Interface for High-Bandwidth Memory Access
- **USPTO # 19/560,038:** Optical Computing Architecture and System
- **USPTO # 19/560,033:** Active Optical Data Cable System with Integrated Processing Unit
- **USPTO # 19/560,031:** Method and System for Pixel-Based Network Routing in a Massively Parallel Optical Interconnect
- **USPTO # 19/562,818:** Apparatus for a Massively Parallel Optical Data Bus Architecture
- **USPTO # 19/562,822:** Apparatus for a Reconfigurable-Width Optical Bus
- **USPTO # 19/562,825:** System for an Optically-Native Central Processing Unit / Wavelength-Discriminating Phototransistors
- **USPTO # 19/562,829:** Method for High-Radix Computing via Optical Bus
- **USPTO # 19/562,838:** Method for Energy-Efficient Computing via Clock Speed Reduction
- **USPTO # 19/562,841:** Asynchronous Optical Computing System
- **USPTO # 19/562,844:** Method for Performance Benchmarking for Parallel Architectures
- **USPTO # 19/562,845:** A Physically Disaggregated Computing System
- **USPTO # 19/562,847:** Apparatus for an Optical Data Fabric Switch
- **USPTO # 19/562,853:** Method for Dynamic Composition of Bare-Metal Computing Resources
- **USPTO # 19/562,855:** System for a Data Center Architecture with Functionally Segregated Resource Pools
- **USPTO # 19/561,200:** Method for Generating a Channel-Optimized Data Encoding Map
- **USPTO # 19/561,223:** System and Method for N-Gram Parallel Data Encoding
- **USPTO # 19/561,228:** Method for Legacy Protocol Tunneling Over a High-Cardinality Interface
- **USPTO # 19/561,236:** Protocol for Physical and Data-Link Layer Encoding Negotiation
- **USPTO # 19/560,061:** Optically-Attached Storage (OAS) Apparatus and System
- **USPTO # 19/560,062:** Portable Data Cartridge with Optical Interface

D. Decoupled Asynchronous Cryptography (Secondary Focus Layer)

- **USPTO # 19/640,945:** A Method for Asynchronous Secure Communication with Post-Hoc Key Derivation
- **USPTO # 19/640,973:** A Secure Parametric Network Protocol with Rotating Encoding Maps for Forward Secrecy
- **USPTO # 19/561,259:** Protocol for Encoding Map Rotation for Forward Secrecy
- **USPTO # 19/645,371:** Secure Communication via Receiver-Generated Key Seeds
- **USPTO # 19/658,570:** Method and System for Geographical and Orientation-Based Encryption Seeds
- **USPTO # 19/658,569:** System and Method for an Encrypted Data Bus
- **USPTO # 19/658,572:** System and Method for Encrypted Keyboard Events
- **USPTO # 19/561,246:** System and Method for Secure Communication via Disposable Encoding Maps
- **USPTO # 19/574,352:** System and Method for Secure Asynchronous Data Communication
- **USPTO # 19/645,192:** Method and Apparatus for Accelerated Prime Number Generation via Modular Signal Analysis

IV. FINANCIAL ACCOUNTABILITY & MANDATORY PROCUREMENT AUDIT

Because the United States Government holds a native, perpetual, zero-cost license to implement and deploy these high-radix and optical communication architectures, it cannot legally be billed for these specific technical optimization methods.

If NVIDIA Corporation or Intel Federal LLC are integrating high-radix array optimization methods or parallel optical routing logics within classified defense data fabrics to meet CDAO metrics, the Department is structurally paying a commercial premium for an asset it already holds a free, perpetual right to utilize.

This notice is framed in a constructive, protective posture designed to safeguard the fiscal integrity of the defense industrial base. A formal procurement audit is required to confirm that prime contract pricing models are adjusted down to reflect the government's existing non-exclusive license rights, preventing systemic cost-accounting deficiencies.

V. AMENDED NOTICE OF POTENTIAL RETALIATORY MECHANISMS

Pursuant to public records within the 387th District Court of Fort Bend County, Texas (Cause No. 25-DCV-328122) and escalated before the Supreme Court of Texas (Cause No. 26-0511), a critical chronological alignment remains active between the submission of federal administrative protections and the deployment of local penal mechanisms.

Following past formal DFARS submissions to defense leadership, highly irregular, extrajurisdictional interventions materialized in local domestic relations tracks, culminating in service evasion, manual docket changes, and pocket warrants designed to compel the physical surrender of corporate computing hardware containing the primary source-code keys to these patent applications.

Because these private adversarial actors intersect directly with logistical and analytical infrastructures managed across prime defense frameworks, any un-audited attempt to compromise the physical computing hardware holding these cryptographic keys introduces a severe risk of unauthorized technology transfer and a direct threat to a pre-licensed federal asset. Loop-in visibility from congressional and administrative oversight circles is required to ensure these dynamics do not cause structural or financial spoliation.

VI. DATA PRESERVATION & INGESTION LOGISTICS

To guarantee that the complete contents of this claim are accurately preserved within a durable federal repository

without network formatting bottlenecks, select text compendiums are attached directly to this transmission in Plain Text configuration. This ensures flawless ingestion by the Pentagon's automated email auditing and compliance archiving networks. The complete, unredacted PDF editions of these volumes containing all stamped court instruments, automated receipts, and certified tracking sheets can be accessed free of charge at the designated sovereign download portals: https://www.Capias-F35.US/ and https://www.isbn9781971481296.com.

All legal, civil, and statutory rights remain explicitly reserved.

Respectfully submitted,
Reinaldo J. Aguiar Marcano

RE: UNIFIED ADMINISTRATIVE PATENT INFRINGEMENT CLAIM CONCERNING MOBILE, PORTABLE, AND VIRTUAL REALITY HARDWARE/ SOFTWARE PROCUREMENTS ACROSS THE DoD ENTERPRISE SOFTWARE INITIATIVE (ESI) AND ARMY CHESS CONTRACT VEHICLES

Dear Directors, Procuring Contracting Officers, and Oversight Authorities:

This formal administrative claim is executed and served upon you in your official capacities pursuant to the **Defense Federal Acquisition Regulation Supplement (DFARS) 227.7004**. The purpose of this verified transmission is to place the United States Government on notice of structural procurement irregularities and potential systemic patent infringement involving active enterprise computing contracts.

To ensure administrative balance and avoid single-point communication friction, this claim is deliberately load-balanced across the senior procurement leadership of the **DoD Enterprise Software Initiative (ESI)** and **Army Computer Hardware, Enterprise Software and Solutions (CHESS)**, bypassing prior local filing nodes while establishing an immutable, cryptographically timestamped federal repository of notice.

Procedural Nuance on Recipient Distribution:
Pursuant to the mandates of DFARS 227.7004, the **TO** line of this claim is strictly restricted to the warranted Procuring Contracting Officers (PCOs) and Program Directors who possess the operational authority to mandate an administrative audit or freeze disbursements. The affected commercial entities (Apple, Microsoft, Google, Meta) and their prime systems integrators (such as SAIC) are positioned strictly in the **CC** line. This ensures absolute "Actual Knowledge" is conferred under **35 U.S.C. § 154(d)** without diluting the mandatory administrative obligations placed upon the federal client.

I. THE JURISPRUDENTIAL PRAGMATISM: PERPETUAL LICENSE GRANT VS. CONTRACTOR MISAPPROPRIATION

Under standard operating parameters governed by **28 U.S.C. § 1498**, the United States Government possesses an eminent domain right over domestic intellectual property, shielding its vendors from civil injunctions while assuming financial liability for infringement.

However, this specific administrative claim introduces a critical, non-frivolous optimization: the primary inventor of the *Aguiar Marcano Intellectual Property Portfolio*—compiled within *The Architecture of Control* (**ISBN 978-1-97-148129-6**)—has proactively executed an **irrevocable, perpetual, world-wide, no-fee license grant** directly to the United States Federal Government and its military components for all national defense and intelligence operations.

Consequently, the U.S. Government owes **zero royalties or licensing fees** for the native utilization, implementation, or deployment of these secure architectures.

The structural irregularity shifts entirely to the targeted defense contractors and systems integrators:

- **Apple Inc., Microsoft Corp., Google LLC, and Meta Platforms, Inc.** actively manufacture, configure, and license the primary mobile devices, laptops, desktop operating systems (macOS, iOS, Windows, Chrome OS, Android), and virtual reality (VR) hardware/software suites utilized across the Department of Defense.
- Systems integrators, specifically **Science Applications International Corporation (SAIC)**, package, bundle, and deliver these commercial off-the-shelf (COTS) devices to the warfighter through multi-billion-dollar enterprise contract vehicles like the **DoD ESI** and **Army CHESS** frameworks.

If these targeted contractors are embedding the research, development, or implementation costs of hardware-level parallel features, secure data fabric connectivity, or cryptographic primitives covered by the Aguiar Marcano portfolio into their federal delivery scales, **they are charging the American taxpayer for intellectual property that the U.S. Government already owns for free.**

This claim is framed constructively. This is not an attack on the technical capabilities of Apple, Microsoft, Google, Meta, or SAIC; rather, it is a **proactive measure to protect their corporate reputations and the integrity of federal procurement.** Conducting a comprehensive procurement audit is in the best interest of all parties to ensure transparency, insulate the agencies from secondary compliance liabilities, and secure immediate cost-mitigation discounts on active hardware and software rollouts.

II. TECHNICAL CONNECT-THE-DOTS: PATENT PROFILES AND SYSTEMIC NEXUS

The targeted hardware delivery streams intersect directly with the core claims of the Aguiar Marcano portfolio. Because the executive leadership of the target entities possesses an elite technical background, this claim provides a detailed granular breakdown of the specific technological touchpoints encumbered by these patents.

1. USPTO # 19/571,566: METHOD AND SYSTEM FOR DE-ANONYMIZING RADIO FREQUENCY SIGNALS VIA A *DISTRIBUTED SENSOR ARRAY*

Target Systems: Apple iOS, Google Android, and Microsoft Windows mobile network stacking, baseband processors, and location-services infrastructure integrated across DoD mobile deployments.

The Nexus: Modern military operations rely heavily on the anonymity of cellular and mobile data packet routing. If an adversary covertly injects localized signal-monitoring frameworks into the consumer supply chains of these primary mobile operating systems, they can track device coordinates using nanosecond-level Time of Arrival (ToA) differentials. This patent explicitly claims the decentralized architecture required to identify, isolate, and neutralize these hidden de-

anonymization grids. Any enterprise mobile endpoint deployed via SAIC that utilizes dynamic cell-site signal triangulation or baseband monitoring directly intersects this sovereign defense framework.

2. USPTO # 19/560,042: METHOD AND SYSTEM FOR HIGH-BANDWIDTH, FREE-SPACE OPTICAL DATA EXCHANGE BETWEEN MOBILE DEVICES

Target Systems: Meta/Oculus Virtual Reality (VR) hardware/software architectures, Apple Silicon (M-series/A-series) hardware fabrics, and high-speed device-to-device local file sharing protocols (e.g., AirDrop, Nearby Share).

The Nexus: To bypass traditional, interceptible radio-frequency (RF) channels in contested operational environments, tactical mobile units and virtual reality headsets require high-bandwidth, short-range, unguided free-space optical connections. This patent protects the specific data-link layer mechanics where data is encoded as a rapid sequence of multi-wavelength light frames utilizing "channel elements" (logical super-pixels) to remain robust against physical movement, focus drift, and angular misalignment. Meta's advanced wireless VR data-streaming protocols and Apple's proximity-based file transfer fabrics direct mirror this spatial light architecture.

3. USPTO # 19/559,608: METHOD AND SYSTEM FOR A GEO-INDEXING COVERT LEDGER

Target Systems: macOS, iOS, Windows, and Android secure core storage subsystems, enterprise mobile device management (MDM) platforms, and SAIC-integrated secure database solutions.

The Nexus: Secure information logging across distributed military networks requires data persistence without relying on centralized, capture-prone relational databases. This patent defines a "DIOSDADO" geo-index architecture where data payloads and transaction parameters are steganographically embedded into geographical and spatial index registries by applying mathematical transformations (such as out-of-range coordinate scaling). Operating systems and secure storage solutions utilizing location-anchored cryptographic metadata blocks directly deploy this pre-licensed infrastructure.

4. USPTO # 19/645,194: A SYSTEM FOR CRYPTANALYSIS BASED ON PARAMETRIC DENOISING OF A PUBLIC KEY

Target Systems: Apple macOS, Windows 11, Chrome OS, and enterprise software security layers deployed via DoD ESI.

The Nexus: Traditional public-key cryptography (RSA, ECC) implemented across commercial operating systems treats key validation as a brute-force numerical sequence. This patent

introduces a paradigm shift by processing public keys as complex, noisy signals and applying parameterized modular filters to isolate and eliminate mathematical "impossible overlaps." Any system-level cryptographic authentication kernel utilizing signal-processing denoising or modular pattern-matching heuristics to accelerate key validation or cryptanalysis is encumbered by this portfolio.

III. NOTICE OF POTENTIAL RETALIATION AND DATA SPOLIATION RISKS

Warranted Contracting Officers are formally alerted to a synchronized chronological pattern of extrajudicial duress that has emerged immediately following prior DFARS submissions to the Pentagon. On the business day following the execution of administrative claims regarding Lockheed Martin, Palantir, and Anduril, highly irregular civil court maneuvers were initialized within the 387th District Court of Fort Bend County, Texas (Case No. 25-DCV-328122), culminating in the manual, ad-hoc alteration of digital docket timestamps via the Tyler Technologies Odyssey infrastructure.

These localized enforcement actions—aimed at executing a forced physical conversion of corporate computing hardware holding source-code infrastructure—suggest an asymmetric retaliatory mechanism deployed to disrupt the federal reporting line. Because the U.S. Government maintains a direct property interest in these pre-licensed technologies, any coercive attempt to restrict the inventor or compromise corporate hardware directly threatens national defense procurement sovereignty. This context is fully detailed in the accompanying records submitted before the Supreme Court of Texas under Cause No. 26-0511.

IV. ENCLOSURE AND DATA PRESERVATION LOGISTICS

To ensure that the extensive clinical data verifying these procurement risks is accurately ingested into the Pentagon's automated archival and email auditing compliance systems without network formatting bottlenecks, **all published compendiums are deliberately attached to this verified email in lightweight, unredacted Plain Text (.txt) format.**

The complete, stamped PDF editions comprising official court instruments, eFiling verification receipts, and electronic registers of actions can be accessed and downloaded free of charge by visiting the following permanent repositories:

- *The Capias and the F-35 Program* (Full PDF): https://www.isbn9781971481296.com
- *Inventions Portfolio & Letter of License Grant* (Full PDF): https://www.Capias-F35.US
-

SCHEDULE OF ATTACHED ENCLOSURES:

- **01__DFARS-227.7004-Lockheed-Martin.pdf** (Certified Copy of Prior Administrative Filing)
- **02__DFARS-227.7004-Plantir-and-Anduril-Industries.pdf** (Certified Copy of Prior Administrative Filing)

- **07__USPTO_Application_Atomic-Express-Logistics-System.pdf** (Core High-Radix Mesh Control Specifications)

V. MANDATORY ADMINISTRATIVE ACTION REQUIRED

As warranted Procuring Contracting Officers managing billions of dollars in active COTS hardware and software procurement cycles, the delivery of this DFARS claim strips your respective commands of "plausible deniability."

Pursuant to federal acquisition regulations, you are hereby mandated to:

- **Initialize an immediate administrative review** and cost-accounting audit of all active hardware, operating system, and VR platform delivery structures provided by Apple, Microsoft, Google, Meta, and SAIC.
- **Halt the assumption of clear title** or final execution of upcoming product refreshes that incorporate the pre-licensed parametric, free-space optical, or signal-denoising architectures without an audited price adjustment.
- **Forward this comprehensive brief immediately** to the Chief of the Intellectual Property Law Division (JALS-IP) within your respective military branches for formal inter-agency tracking.

Govern yourselves accordingly.

Respectfully submitted,

Reinaldo Aguiar Marcano

REGISTERED EMAIL™ | CERTIFIED DELIVERY

This is a Registered Email™ message from **RJ Aguiar**.

Dear Mr. Stanley, Secretary Hegseth, and Mr. Michael:

This comprehensive administrative and technical disclosure is officially executed and served upon you in your formal capacities within the United States Department of Defense (DoD). This document constitutes a new, unified **Formal Administrative Claim for Patent Infringement under DFARS 227.7004**, a **Notice of Perpetual No-Fee License Grant**, and a formal **Notice of Potential Retaliatory Mechanisms** intersecting with critical defense procurement infrastructure.

I. Formal Administrative Claim under DFARS 227.7004: JADC2 Tactical Nexus

We formally allege that the Joint All-Domain Command and Control (JADC2) architectures, satellite communications, troposcatter modules, point-to-point radio frequency (RF) frameworks, and cryptographic data fabrics currently being commercialized and deployed by **Lockheed Martin Corporation**—and integrated alongside cloud architectures managed by **Microsoft Azure**, **Amazon AWS**, **Palantir Technologies**, and **Anduril Industries**—directly infringe upon the foundational patent applications compiled within the Aguiar Marcano Intellectual Property Portfolio (ISBN 9781971481296).

The targeted procurements natively intersect with the following core tracks of the **JADC2 data fabric** and distributed telecommunications arrays:

A. The Cryptographic Paradigm Shift: Elimination of the "Key-First" Bottleneck

Modern tactical networks are fundamentally constrained by sequential, "key-first" handshakes (e.g., traditional TLS/SSL frameworks), making them highly vulnerable to real-time Man-in-the-Middle (MITM) interception and traffic analysis. The following inventions completely render the legacy binary "key-first" paradigm obsolete by decoupling the data payload from synchronous key exchanges:

- **USPTO # 19/645,371 (Secure Communication via Receiver-Generated Key Seeds):** Inverts the traditional key exchange by having the intended receiver generate and push single-use key seeds over an uplink, ensuring the final message encryption key is never transmitted across the vulnerable downlink channel.

- **USPTO # 19/640,945 (Asynchronous Secure Communication with Post-Hoc Key Derivation):** Breaks temporal predictability by splitting transmissions into three asynchronous parts (Prefix, Message, Suffix) across separate paths, deriving the final decryption key post-hoc only after complete block concatenation.
- **USPTO # 19/658,570 (Geographical and Orientation-Based Encryption Seeds):** Utilizes real-time GNSS coordinates and IMU digital compass orientations relative to Magnetic North as continuous, high-fidelity physical entropy sources to generate keys immune to timestamp-based prediction.
- **USPTO # 19/640,973 & # 19/561,259 (Secure Parametric Network Protocol with Rotating Encoding Maps):** Enforces end-to-end forward secrecy across routed, multi-hop networks by utilizing disposable, time-variant encoding maps that rotate mid-session based on packet thresholds, preventing retrospective decryption of captured traffic.
- **USPTO # 19/658,572 (System and Method for Encrypted Keyboard Events):** Encrypts each individual keystroke event independently as a distinct ciphertext, defeating acoustic side-channel leaks and machine-learning-driven text structure analysis.

B. High-Radix, Post-Binary Tactical Communications

- To bypass the bandwidth and physical bottlenecks of serial binary serialization, the following technologies define a native, high-radix physical and data-link layer, processing abstract mathematical "recipes" and symbolic multi-state signals instead of standard bits:
- **USPTO # 19/639,265 (High-Radix and Parametric Satellite Communication System):** Modulates Earth-to-space and space-to-Earth RF links into N discrete, distinguishable physical states ($N > 2$) to optimize satellite transponder throughput.
- **USPTO # 19/639,272 (Adaptive High-Radix and Parametric Troposcatter Communication System):** Dynamically adjusts the channel radix (N) in real-time based on tropospheric fading and multipath metrics, scaling data density constructively.
- **USPTO # 19/639,255 (High-Radix and Parametric Cellular Communication System):** Implements post-binary symbolic data transport across wireless cellular segments natively.
- **USPTO # 19/639,258 (High-Radix and Parametric Point-to-Point RF Communication System):** Establishes fixed, line-of-sight wireless backhaul links operating on high-cardinality symbol maps.
- **USPTO # 19/638,466 (Secure Communication Using Covert Side-Channels Embedded in a High-Cardinality Stream):** Embeds logical side-channels (e.g., spatial positioning) within a primary optical or RF stream, phase-shifting key data relative to the primary payload via a pseudo-random offset.

C. Advanced Cryptanalysis, Data Logistics, and Signal De-Anonymization

- **USPTO # 19/645,192 (Accelerated Prime Number Generation via Modular Signal Analysis):** Partitions massive integer space into shards, mapping remainders to multi-state digital signals to detect "prime oases" and accelerate key generation.
- **USPTO # 19/645,194 (Cryptanalysis Based on Parametric Denoising of a Public Key):** Treats a public key as a noisy signal, applying parameterized modular filters to eliminate "impossible overlaps" and rapidly isolate prime factors.
- **USPTO # 19/559,656 (Covert Communication via Satellite Vision Systems):** Utilizes synchronized ground arrays to embed data-rich visual patterns directly into the imagery captured by non-cooperative orbital observation platforms.
- **USPTO # 19/559,972 (Communication via Passive Reflection from Non-Cooperative Orbiting Objects):** Employs an automated kinematic engine to map Low Earth Orbit (LEO) satellite trajectories, using their physical chassis as passive RF mirrors to bounce over-the-horizon signals without their active participation.
- **USPTO # 19/559,608 (Method and System for a Geo-Indexing Covert Ledger):** Formulates an identity-agnostic distributed ledger by encoding transactional units as out-of-range coordinate transformations mapped directly to public real estate metadata.
- **USPTO # 19/571,566 (De-Anonymizing Radio Frequency Signals via a Distributed Sensor Array):** Analyzes Time of Arrival (ToA) differentials across an array of passive sensors to derive precise directional vectors, matching transmissions with telecom provider event logs to de-anonymize encrypted streams.

II. Notice of Perpetual, Irrevocable Grant to the U.S. Federal Government

As explicitly hardcoded within the legal text of the underlying patent applications (compiled under ISBN

9781971481296), the Primary Inventor has proactively executed a **perpetual, irrevocable, worldwide, royalty-free, non-exclusive license grant** to the United States Federal Government and its defense and national security components for all sovereign defense purposes.
Because the U.S. Government possesses an absolute, zero-cost right to practice, implement, and deploy these high-radix and parametric cryptographic architectures natively, the financial implications for the national defense budget are substantial. The Department is legally unencumbered by private commercial royalty streams for any systems utilizing these "recipes" for JADC2 data-routing optimization.

III. Notice of Potential Retaliatory Mechanisms & Sovereign Interception Risks

Pursuant to the clinical logs detailed in *"The Capias and the F-35 Program"* (ISBN 9781105250286), a severe chronological alignment exists between the submission of formal DFARS disclosures and the immediate deployment of localized penal mechanisms.

Chronological Causality Tracking: On April 17, 2026, the Primary Inventor transmitted formal DFARS 227.7004 claims to the Pentagon. On the immediate next business day (April 21, 2026), adversarial counsel representing local domestic relations tracks abruptly accelerated a highly anomalous property discovery track. This track explicitly targeted the forced conversion and physical surrender of the independent corporate computing hardware containing the primary source-code keys to these exact patent applications.

Because these private actors are deeply intertwined with cloud, analytical, and logistics infrastructure managed across prime defense contractors—including **Palantir**, **Anduril**, **Lockheed Martin**, **Microsoft Azure**, and **Amazon AWS**—any un-audited attempt to seize or compromise the physical hardware holding these cryptographic source keys introduces a severe risk of data spoliation, unauthorized tech-transfer, and a direct threat to the financial and technological sovereignty of the U.S. government's pre-licensed asset.

IV. Constructive Requisition for a Procurement Audit

This notice is submitted in a constructive, non-adversarial posture designed explicitly to safeguard the integrity of the Department, the taxpayers, and the defense industrial base. It is in the shared interest of all stakeholders—including the defense primes—to ensure complete regulatory clarity.

If prime contractors are embedding the research, development, or licensing costs of these high-radix, post-binary, or asynchronous communication mechanisms into multi-billion-dollar federal procurement tracks, the government is effectively being billed for intellectual property it already holds a free, perpetual license to utilize.

Therefore, we respectfully request that the **Chief Digital and Artificial Intelligence Office (CDAO)**, alongside the **Intellectual Property Law Division (JALS-IP)**, initiate a targeted procurement audit of active JADC2 and communication modernized contracts to verify cost-accounting lines, enforce compliance with the government's native license, and protect the public archives from asymmetric exploitation.

Respectfully submitted,

Reinaldo J. Aguiar Marcano
Primary Inventor / Relator Pro Se
2302 Britton Ridge Drive, Katy, Texas 77494

EXHIBIT E-8

STATE COURT CIVIL WRIT OF CAPIAS

(VOID ARREST WARRANT) ISSUED BY FORT

BEND COUNTY
DATED MAY 26, 2026

SERVICE FEE COLLECTED
BY DISTRICT CLERK

Capias

Date of Birth: [redacted] **Gender: MALE**
Driver License No: [redacted] **Social Security No:** [redacted]
Other: **26714 VALLEYSIDE DR**
KATY TX 77494
OR 2302 BRITTON RIDGE DRIVE

Bond Type: **CASH BOND**
Bond Amount: **$2,500.00**

Cause No. **25-DCV-328122**

THE STATE OF TEXAS,

TO ANY PEACE OFFICER OF THE STATE OF TEXAS---GREETING:

YOU ARE HEREBY COMMANDED TO ARREST: **REINALDO J. AGUIAR MARCANO**, to be found in your county, and **REINALDO J. AGUIAR MARCANO** safely keep, so that you have **REINALDO J. AGUIAR MARCANO** before the Honorable 387th Judicial District Court of Fort Bend County, Texas, at the Court House of said County, located at **1422 Eugene Heimann Circle, Richmond, TX 77469,** and there to answer for their failure to appear for **CIVIL** [redacted] on **May 14, 2026** before the **387TH JUDICIAL DISTRICT COURT**, as ordered.

HEREIN FAIL NOT, but make due return hereof to this Court on **INSTANTER**.

Witness my hand and seal of Office at Richmond, Texas, **on this the 26th day of May, 2026.**

EXHIBIT E-9

SIGNED STATE COURT ORDER FOR CAPIAS AUTHORIZING PHYSICAL RESTRAINT OF PETITIONER

(REDACTED/FLATTENED/COMPRESSED RECORD)

DATED MAY 15, 2026

Filed
5/14/2026 9:50 AM
Beverley McGrew Walker
District Clerk
Fort Bend County, Texas
[redacted]

[redacted]

NO. 25-DCV-328122

IN THE MATTER OF [redacted]	§	**IN THE DISTRICT COURT**
AND	§	**387TH JUDICIAL DISTRICT**
REINALDO J. AGUIAR MARCANO	§	
AND IN THE INTEREST OF [redacted]	§	**FORT BEND COUNTY, TEXAS**

ORDER FOR CAPIAS AND SETTING OF BOND

On May 14, 2026, the Court heard Petitioner's Motion for Enforcement of [redacted] Petitioner appeared and requested that a capias be issued for the arrest of Respondent for failure to appear.

The Court, after reviewing the pleadings and hearing the argument of counsel, finds that this matter was duly and properly set for hearing on May 14, 2026 at 9:00 a.m. at 1422 Eugene Heimann Cir., Richmond, Texas, 77469, and that Respondent failed to appear.

The Court further finds that Respondent was personally served with a timely order to appear at the above time, place, and date.

The Court further finds that the request for writ of capias should be granted.

IT IS ORDERED that the clerk of this Court issue a writ of capias, directed to the sheriff or any peace officer of any county within the state of Texas, commanding that sheriff or peace officer to take the body of Reinaldo J. Aguiar Marcano,

ROUTED TO COURT
RT'D TO D. CLERK 05/22/2026 atb

Respondent, and bring him before this Court to answer the allegations of the enforcement petition or motion previously served on Respondent.

IT IS ORDERED that the detaining authority shall notify the Court of Respondent's arrest immediately following Respondent's arrest.

IT IS ORDERED that Respondent shall be permitted to post a cash bond only of two thousand and five hundred and 00/100 dollars ($2,500.00), such sum to be deposited in the registry of this Court and subject to forfeiture in accordance with law if Respondent fails to appear for hearing on the court date following release from custody.

If Respondent attempts to post bond, IT IS ORDERED that the detaining authority contact the Court before Respondent's release to determine the date and time of the hearing and include such information in the bond conditions.

SIGNED on 5/14/2026

APPENDIX II: CONCURRENTLY FILED 37 CFR § 1.183 PETITION

PETITION TO THE DIRECTOR UNDER 37 CFR § 1.183 TO SUSPEND PROSECUTION IN APPLICATION NO. 19/639,271 FILED CONCURRENTLY HEREWITH ON AUGUST 20, 2026

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

In re Patent Application of:	Reinaldo Javier Aguiar Marcano
Application Number:	19/639,271
Confirmation Number:	6826
Filing Date:	April 5, 2026
For:	HIGH-RADIX MASS STORAGE SYSTEM
Group Art Unit:	To Be Assigned
Examiner:	NGUYEN, QUANG M.

PETITION TO THE DIRECTOR UNDER 37 CFR § 1.183 TO SUSPEND PROSECUTION ON CONSTITUTIONAL DUE PROCESS AND NATIONAL DEFENSE GROUNDS [REQUEST FOR EXPEDITED ADMINISTRATIVE PROCESSING]

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Sir:

Reinaldo Javier Aguiar Marcano, the inventor prosecuting the above-identified patent application Pro Se as Applicant and Petitioner, respectfully submits this Petition to the Director under **37 CFR § 1.183** to suspend prosecution and stay all procedural deadlines and fee-payment requirements.

Petitioner respectfully requests a temporary suspension of all prosecution and a stay of all procedural deadlines in this application for a period of six (6) months, or until such time as the Applicant is able to safely secure legal representation.

Petitioner further requests **expedited administrative processing** of this Petition based on urgent national security, sovereign interest, and national defense procurement grounds.

The required petition fee under **37 CFR § 1.17(f)** (Fee Code: 2462 for Small Entity) is being paid in full concurrently herewith. Petitioner respectfully requests the Director to immediately process this Petition on expedited national defense and constitutional grounds.

In support of this Petition, Applicant and Petitioner respectfully shows the following extraordinary circumstances:

I. INTENT OF THE PETITION

The purpose of this Petition is to protect this critical daughter patent application of vital public, aerospace, and national security interest from procedural dismissal or involuntary abandonment. Due to an ongoing, coordinated state-court extrajudicial intervention that has resulted in the physical restraint of the pro se inventor, the systematic block of his postal correspondence, and an active Habeas Corpus proceeding before the Supreme Court of the United States, Applicant is currently legally and physically incapacitated from prosecuting this application or safely retaining patent counsel.

This Petition seeks to temporarily "freeze" the administrative status of this application to protect the underlying invention from loss, until the federal judiciary resolves the constitutional emergencies currently pending in the Supreme Court of the United States, after which Applicant intends to procure formal patent counsel to complete prosecution.

II. CREDENTIALS, INVENTOR TRACK RECORD, AND AEROSPACE SYNERGY

To establish credibility and assist the Office of Petitions in evaluating the high technological value of the targeted intellectual property, Applicant and Petitioner formally submits his established professional credentials as a technologist of record with the USPTO:

1. **Professional Stature:** Petitioner is a former Google Search Ranking Staff Engineer and a former Managing Director at Goldman Sachs.

2. **Demonstrated Patent Success:** Petitioner has a demonstrated history of successful patent prosecution before the USPTO and is the named sole inventor on two previously issued Google Inc. patents of significant commercial and operational relevance:

   - **U.S. Patent No. 9,275,419 B1** (*"Method for building, expanding or complementing a social graph based on contact information"*, Issued March 1, 2016, Assignee: Google Inc.).
   - **U.S. Patent Application Publication No. 2015/0205766 A1** (*"Serving combined resources to a browser client"*, Published July 23, 2015, Assignee: Google Inc.).

The technology in this application represents critical, foundational breakthroughs in optically-native computing, disaggregated compute clusters, asynchronous physical networks, and secure high-radix processing, specifically engineered to solve the massive physical, thermal, and weight constraints currently bottlenecking modern **aerospace** and quantum computing platforms.

These credentials demonstrate that the Petitioner is an established and successful inventor, and that the instant application represents highly sophisticated, high-value technology that demands serious, rigorous administrative protection.

III. THE MASTER PATENT DEPLOYMENT PORTFOLIO AND THE BASE OPTICAL COMPUTING TECHNOLOGICAL CLUSTER

This application is not an isolated filing, but rather a vital daughter application in a tightly integrated, co-dependent patent portfolio anchored to the central Hub of Application No. 19/559,705. This master portfolio is technologically organized into four (4) distinct, dedicated technological cluster vectors. The instant application, **Application No. 19/639,271**, is a critical component of:

A. The Base Optical Computing Technological Cluster

This core cluster governs the foundational hardware optical computing link, optical memory bus, and optically-native CPU architectures, specifically enabling the direct analog signal encoding over massively parallel optical interfaces:

1. **Application No. 19/559,705** (Title: *"HIGH-BANDWIDTH, LOW-LATENCY DATA TRANSMISSION SYSTEM AND PROTOCOL"*), which acts as the central many-to-one Hub.

2. **Application No. 19/639,271** (Title: *"A HIGH-RADIX MASS STORAGE SYSTEM"*), the instant application, which implements high-radix mass storage systems natively coupled to high-speed optical buses.

3. **Application No. 19/561,236** (Title: *"PROTOCOL FOR PHYSICAL AND DATA-LINK LAYER ENCODING NEGOTIATION"*), which directly governs the lower-layer negotiation protocol for the 19/559,705 hub.

4. **Application No. 19/561,259** (Title: *"PROTOCOL FOR ENCODING MAP ROTATION FOR FORWARD SECRECY"*), which provides encoding map rotation protocol for forward secrecy.

5. **Application No. 19/561,223** (Title: *"SYSTEM AND METHOD FOR N-GRAM PARALLEL DATA ENCODING"*), which implements parallel data encoding techniques across the optical link.

6. **Application No. 19/561,228** (Title: *"METHOD FOR LEGACY PROTOCOL TUNNELING OVER A HIGH-CARDINALITY INTERFACE"*), which provides a method for legacy protocol tunneling over the high-cardinality interface.

7. **Application No. 19/562,825** (Title: *"SYSTEM FOR AN OPTICALLY-NATIVE CENTRAL PROCESSING UNIT"*), which discloses an optically-native central processing unit.

8. **Application No. 19/571,558** (Title: *"SYSTEM AND METHOD FOR HIGH-RADIX COMPUTING USING WAVELENGTH-DISCRIMINATING PHOTOTRANSISTORS"*), which implements high-radix computing using wavelength-discriminating phototransistors.

9. **Application No. 19/562,847** (Title: *"APPARATUS FOR AN OPTICAL DATA FABRIC SWITCH"*), which discloses the physical apparatus for an optical data fabric switch.

10. **Application No. 19/560,031** (Title: *"METHOD AND SYSTEM FOR PIXEL-BASED NETWORK ROUTING IN A MASSIVELY PARALLEL OPTICAL INTERCONNECT"*), which discloses pixel-based network routing in a massively parallel optical interconnect.

11. **Application No. 19/562,838** (Title: *"METHOD FOR ENERGY-EFFICIENT COMPUTING VIA CLOCK SPEED REDUCTION"*), which implements energy-efficient computing via clock speed reduction inside the core.

The Core Cryptographic Shield and ITAR National Security Nexus: The massive bandwidth and processing speeds enabled by Petitioner's companion optical computing systems represent an immense technological leap. However, these extremely high-throughput systems also introduce a severe national security risk: they make the brute-forcing of traditional, copper-bus-based encryption keys computationally trivial.

The master cryptographic application in the Optical cluster, **Application No. 19/640,945** (Title: *"A METHOD FOR ASYNCHRONOUS SECURE COMMUNICATION WITH POST-HOC KEY DERIVATION"*), represents the vital defensive "shield" designed to restore balance. Unlike companion applications in this cluster, Petitioner has deliberately **not** preemptively assigned or executed a public-interest license grant in the 19/640,945 specification. Because high-grade cryptographic technologies are subject to strict export controls under the **International Traffic in Arms Regulations (ITAR)**, Petitioner recognized that executing a blind license grant without direct, coordinated interaction with authorized national security, defense, or NSA officials would be procedurally and legally irresponsible.

However, the lack of a pre-existing license grant makes the administrative protection of this application and its companion daughters (including the instant 19/639,271 application) **even more urgent.** If the USPTO allows this technology cluster to be abandoned in private pre-exam processing due to Applicant's forced silence, the technology falls into the public domain allowing foreign adversaries to extract, copy, or patent the technology through international corporate proxies.

The Aerospace and JADC2 Nexus: Traditional electrical data buses are completely inadequate to handle the massive sensor fusion, real-time distributed computing, and high-

throughput cryptographic data fabrics required by modern national defense platforms—such as the F-35 Joint Strike Fighter's Technology Refresh 3 (TR-3) upgrade, Collaborative Combat Aircraft (CCA), or the next-generation Joint All-Domain Command and Control (JADC2) tactical network. Attempting to achieve these multi-gigabit computing arrays under the strict weight and thermal boundaries of airborne fighters and battlespace command networks requires abandoning legacy monolithic architectures. Physically disaggregated computing platforms and parametric encodings, natively interconnected via optical buses, represent the only physical means to overcome these bottlenecks. Due to the high strategic relevance of these technologies, the Petitioner has filed formal Administrative Claims for Patent Infringement under DFARS 227.7004 with senior DoD leadership concerning Lockheed Martin (April 17, 2026), Palantir and Anduril (April 17, 2026), as well as a unified tactical nexus claim concerning the JADC2 communications matrix served upon Secretary of Defense Pete Hegseth (June 4, 2026).

Because this application cluster directly encumbers the next-generation aerospace computing upgrades currently being commercialized by major defense contractors, any procedural or administrative attack that targets the Petitioner's physical liberty or blocks his mail represents an existential threat to this entire federal-interest technology family.

IV. CONSTITUTIONAL DUE PROCESS AND FIFTH AMENDMENT PROPERTY RIGHTS

Under established federal law, a patent application is a cognizable **private property interest** protected under the **Due Process Clause of the Fifth Amendment** of the United States Constitution.

Under the governing procedural framework set forth in *Mathews v. Eldridge*, 424 U.S. 319 (1976), federal agencies are constitutionally required to provide essential procedural safeguards before depriving a citizen of protected property. To satisfy the pre-conditions of due process, the government must provide (1) actual and effective notice, and (2) a meaningful opportunity to be heard before an impartial decision-maker.

Factual capacity to participate is the core constitutional question. Here, due to a severe regional United States Mail blockade and a live, void civil Capias that constructively confines the pro se Applicant, the essential pre-conditions of due process have been completely demol-

ished. Factual notice was impossible, and the capacity to meet administrative prosecution deadlines or physically travel to retain patent counsel was entirely suppressed.

Because the printed formalities notices were never physically delivered via the USPS, the Applicant received no notice of the outstanding requirements until discovering them on the electronic USPTO Patent Center portal. Therefore, under constitutional due process mandates:

Under the USPTO's own regulations, MPEP provisions, and Fifth Amendment constitutional mandates, physical paper notice served via the United States Postal Service remains the primary, legally binding notification method for Pro Se litigants. E-Notification cannot substitute for this primary method unless there is explicit and verified actual receipt.

Under the foundational standards of *Mullane v. Central Hanover Bank & Trust Co.*, 339 U.S. 306 (1950) and *Jones v. Flowers*, 547 U.S. 220 (2006), when the government becomes aware that its primary notice mechanism (physical mail) has failed—such as when paper letters are returned to sender as undeliverable due to a regional mail block it has a mandatory constitutional obligation to take active, reasonable alternative steps to ensure actual notice is received. Simply relying on passive electronic portal dockets or assuming emails are received does not satisfy the state's burden.

V. STATEMENT OF EXTRAORDINARY FACTS, SOVEREIGN LICENSE, AND DFARS EXHIBITS

An extraordinary situation exists under 37 CFR § 1.183 because of a severe and coordinated collision of physical restraint, mail obstruction, and active federal national defense procurement disputes:

1. **Unconstitutional Physical Restraint under Void Capias:** A state trial court in Fort Bend County, Texas, acting in direct violation of mandatory automatic stays, issued a void civil Writ of Capias (arrest warrant) against the Applicant dated May 26, 2026, pursuant to a signed court Order for Capias dated May 15, 2026, weaponizing the local judiciary to impose a constructive *de facto* confinement upon the Applicant within his office space. Opposing parties and state clerks deliberately withheld and suppressed the publication and issuance of the Writ of Capias for eleven (11) days from

May 15 to May 26, 2026, maliciously structured to prevent the Pro Se Applicant from seeking immediate judicial recourse, filing protective stays, or retaining registered legal counsel.

2. **Systematic Obstruction of United States Mail and Factual Impact on USPTO Applications:** Furthermore, as documented in active court records, Applicant's physical residence and corporate office have been systematically targeted by third-party adversaries who falsely designated the properties as "vacant" with the United States Postal Service, blocking and returning critical paper correspondence. To this date, the Applicant has not received a single physical paper correspondence from the USPTO via the USPS for any of his multiple applications in active processing.

   As a direct consequence of this mail blockage, the Applicant was completely unaware until recently of the pre-examination notifications outstanding on this application. Immediately upon discovering the Notice of Incomplete Reply via the electronic portal, Applicant compiled this concurrent response and Petition to protect this vital asset.

3. **Active Supreme Court of the United States Proceeding:** The legality of this Capias warrant, the systematic regional due process deprivations, and the obstruction of Applicant's correspondence are currently the subject of an active **original Habeas Corpus proceeding** pending before the **Supreme Court of the United States** under **Docket No. 26-186, Original** (formally updated by Petitioner's Second Supplemental Brief e-submitted on August 19, 2026).

4. **Active Sovereign Interest and Whistleblower Retaliation:** This entire technology cluster is of critical public and national sovereign interest. As drafted and filed in the specification of Hub Application No. 19/559,705, the Applicant has granted a perpetual, royalty-free, non-exclusive license to the United States Government and its agencies to practice and use the invention worldwide for any and all governmental and defense purposes. This technology is also the subject of multiple **Formal Administrative Claims for Patent Infringement under DFARS 227.7004** submitted by the Applicant to Senior Leadership of the Department of Defense.

VI. COMPLIANCE WITH 37 CFR § 1.183 AND THE REQUEST FOR RELIEF

Under **37 CFR § 1.183**, the Director may suspend or waive any non-statutory requirement of the regulations when an extraordinary situation exists and justice requires.

Applicant does not seek to waive any statutory requirements under Title 35 of the United States Code. Rather, Applicant seeks a temporary suspension of the USPTO's administrative rules under **37 CFR § 1.103(a)** (Suspension of Action) to waive the requirement that no reply be outstanding, and to protect this application while the physical and legal constraints are resolved by the federal courts.

Justice heavily requires this waiver. Denying this petition would allow hostile third parties to successfully co-opt state judicial power and mail delivery blocks to destroy a critical federal-interest asset, causing irreparable harm to both the inventor and the sovereign licensee.

VII. PRAYER FOR RELIEF

WHEREFORE, Applicant and Petitioner respectfully prays that the Director:

1. Find that an extraordinary situation exists under 37 CFR § 1.183 where the interests of justice and the constitutional protections of the **Fifth Amendment** require the waiver of non-statutory administrative rules;

2. Grant **immediate expedited processing** of this Petition on National Defense and Aerospace procurement grounds;

3. Waive the strict response deadlines for the outstanding Notice of Incomplete Reply, acknowledge the concurrent payment of the petition fee (Fee Code 2462), and reset the response clock;

4. Order a **six-month administrative suspension of all prosecution** under 37 CFR § 1.103(a), to be renewed upon request if necessary, to protect this application from procedural dismissal or abandonment; and

5. Direct that all electronic notifications and correspondence in this application be routed

to Applicant and Petitioner's secure registered email address (reinaldo.aguiar.marcano@isbn9781971481296.com) to bypass the physical mail block.

Respectfully submitted,

/Reinaldo Javier Aguiar Marcano/

Reinaldo Javier Aguiar Marcano, Pro Se Applicant and Petitioner

DATE: April 17, 2026

DELIVERY METHOD: Cryptographically Verified via Registered Email (RPost)

DEAR:

Lt. Gen. Schmidt and the F-35 JPO Contracting Directorate,

ISBN 9781971481296

This comprehensive technical and legal brief is served upon you in your official capacities within the United States Department of Defense (DoD).

This document constitutes a formal Administrative Claim for Patent Infringement under the Defense Federal Acquisition Regulation Supplement (DFARS) 227.7004. The purpose of this claim is to notify the United States Government of a highly anomalous and legally precarious situation involving the unauthorized commercialization of a foundational patent portfolio by Lockheed Martin Corporation.

I. THE U.S. DEPARTMENT OF DEFENSE LICENSE GRANT AND STRATEGIC BLOCKADE

Under standard operating procedures defined by 28 U.S.C. § 1498, the United States Government exercises eminent domain over domestic patents, shielding its defense contractors from civil injunctions and assuming financial liability for infringement.

However, the inventor of the Aguiar Marcano Intellectual Property Portfolio—which comprises 52 foundational patent applications published defensively in *The Architecture of Control* (ISBN 978-1-97-148129-6)—has proactively granted an irrevocable, perpetual, no-fee license to the federal government for all national defense purposes. The United States Department of Defense, specifically through Under Secretary of Defense Emil Michael, has been placed on direct notice of this license grant and is the designated authority administering this license on behalf of the military.

Lockheed Martin is currently utilizing these specific patented architectures to overcome severe computational bottlenecks in their aerospace and quantum programs. By embedding the research, development, and licensing costs of these technologies into multi-billion-dollar government contracts, Lockheed Martin is effectively charging the American taxpayer for intellectual property that the government already possesses the legal right to utilize indefinitely and without cost. Failing to halt the disbursement of funds to this contractor for pre-licensed intellectual property constitutes a gross mismanagement of taxpayer dollars.

II. Satisfaction of DFARS 227.7004 Administrative Claim Requirements

To compel immediate administrative intervention, this communication strictly adheres to the requirements of DFARS 227.7004(a) and (b):

1. **Allegation of Infringement:** We formally allege that the systems provided and developed by Lockheed Martin directly infringe upon the patent applications detailed

ISBN 9781971481296

below.

2. **Request for Compensation:** Because the government holds a free license to this portfolio, our request for compensation is a formal legal demand that the DoD immediately cease compensating Lockheed Martin for the licensed intellectual property.

3. **Citation of Patents:** The infringed applications include USPTO 19/639,219; 19/560,038; 19/562,838; and 19/562,845.

4. **Identification of Procurements:** See Section III below for the specific systems and contracting activities.

5. **Element-by-Element Comparison:** The required claim maps demonstrating precisely how the representative claims map to the accused software and processes are attached to this verified transmission.

III. Technological Nexus and Targeted Procurements

Lockheed Martin's most critical modernization efforts intersect directly with our proprietary claims, making their government contracts highly susceptible to this administrative review.

A. F-35 Technology Refresh 3 (TR-3) and the Integrated Core Processor

Responsible Activity: F-35 Joint Program Office (JPO)

The TR-3 upgrade is designed to modernize the computational core of the F-35 via a new L3Harris integrated core processor and a new aircraft memory unit, promising a 25x computing increase. Attempting to achieve this massive increase in computational throughput within the strict thermal and weight constraints of an airborne fighter requires abandoning traditional electrical data buses.

- **USPTO 19/560,038 (Optical Computing Architecture) & USPTO 19/562,838 (Energy-Efficient Computing via Clock Speed Reduction):** These patents define a holistic data fabric that replaces electrical I/O bottlenecks with a massively parallel optical interconnect, enabling a reduction in clock speed while maintaining high throughput. Any TR-3 processor upgrades utilizing internal optical data buses to mitigate thermal output directly infringe upon these hardware claims.

- **USPTO 19/639,219 (Central Processing Unit Architecture for Native Parametric and Symbolic Computation):** Upgrading the F-35's core processing capabilities to handle

ISBN 9781971481296

advanced sensor fusion natively relies upon our parametric high-radix architecture.

B. Strategic Quantum Computing and QML Partnerships

Responsible Activity: Lockheed Martin Research and Technology / Defense Innovation Unit (DIU)

Target Leadership: Craig Martell (CTO) and Valerie Browning (VP, Research & Technology)

Lockheed Martin is aggressively pursuing quantum technologies for aerospace and defense, recently signing strategic collaborations with PsiQuantum (November 2025), Xanadu (February 2026), and Fujitsu (February 2026). These partnerships focus on deploying fault-tolerant quantum algorithms, Quantum Machine Learning (QML), and dual-use AI/ML edge computing.

- **USPTO 19/562,845 (Physically Disaggregated Computing Systems):** To achieve the hybrid quantum-classical workflows required by these new partnerships, Lockheed Martin must utilize a disaggregated architecture where classical GPUs and quantum processing units (QPUs) are segregated yet interconnected via an ultra-high-bandwidth data fabric. This exact hybrid integration model is legally encumbered by our portfolio.

IV. Statutory and Ethical Mandates

Because Lockheed Martin operates as a publicly traded corporate entity bound by strict compliance and ethical frameworks, we must formally remind your corporate leadership and legal counsel of the following obligations:

1. SEC Disclosure Requirements for Public Companies

For Lockheed Martin Corporation, we remind you that if you find yourselves potentially infringing any of the Inventions covered in this intellectual property portfolio, you are legally obligated to assess whether it is necessary to notify your investors and file a material risk disclosure notice with the Securities and Exchange Commission (SEC). The failure to disclose a material intellectual property encumbrance that threatens your core aerospace platforms (such as the F-35) constitutes a severe breach of fiduciary duty.

2. Attorney Ethical Obligations (Model Rule 8.3)

A direct reminder is issued to the Chief Legal Officers, General Counsels, and all retained outside counsel receiving or reviewing this notice (including Kevin J. O'Connor): You are strictly bound by your ethical obligations, including ABA Model Rule of Professional Conduct 8.3. You maintain an affirmative obligation to report any unprivileged knowledge of wrongdoing that raises a substantial question as to a lawyer's honesty, trustworthiness, or fitness. If your internal audits reveal evidence of coordinated intellectual property theft or procurement fraud that

ISBN 9781971481296

may compromise the integrity of a court, you are ethically mandated to report such conduct to the appropriate professional authorities.

V. Immutable Audit Trail and Mandatory Administrative Action

This formal claim is delivered via Registered Email (RPost). This service provides an immutable, cryptographically verified audit trail, including proof of delivery, message content, and the exact official time of sending and opening.

As warranted Procuring Contracting Officers, if you receive cryptographically verified proof that a contractor is charging the government for freely available intellectual property, your failure to initiate an audit or halt payments leaves a permanent digital footprint of your inaction. This exposes you to severe administrative and potentially criminal liability for complicity in procurement fraud.

Pursuant to federal acquisition regulations, you are hereby mandated to freeze approvals related to the disputed intellectual property, halt the assumption of clear title for the F-35 TR-3 upgrades, and forward this communication immediately to the Intellectual Property Law Division of your respective branches.

V/R,

Reinaldo Aguiar Marcano

DEAR:

Mr. Creech, Ms. Steele, Ms. Jenkins, Mr. Robinson, Ms. Winnert, Mr. Elliott, and the AFLCMC

ISBN 9781971481296

Contracting Office,

This comprehensive technical and legal brief is served upon you in your official capacities as warranted Procuring Contracting Officers (PCOs) and Directors within the United States Department of Defense (DoD).

This document constitutes a formal Administrative Claim for Patent Infringement under the Defense Federal Acquisition Regulation Supplement (DFARS) 227.7004.[1] The purpose of this claim is to notify the United States Government of a highly anomalous and legally precarious situation involving the unauthorized commercialization of a foundational patent portfolio by major defense contractors—namely Palantir Technologies and Anduril Industries.[1]

I. The Jurisprudential Paradox: Eminent Domain vs. The Perpetual License

Under standard operating procedures defined by 28 U.S.C. § 1498, the United States Government exercises eminent domain over domestic patents, shielding its defense contractors from civil injunctions and assuming financial liability for infringement.[1]

However, the situation at hand introduces a critical jurisprudential paradox. The inventor of the Aguiar Marcano Intellectual Property Portfolio—which comprises 52 foundational patent applications published defensively in *The Architecture of Control* (ISBN 978-1-97-148129-6)—has proactively granted an irrevocable, perpetual, no-fee license to the federal government for all national defense purposes.[1] Consequently, the U.S. Government owes absolutely no royalties for the utilization of these systems.[1]

The legal friction immediately shifts. Defense contractors (Palantir and Anduril) are currently utilizing these specific patented architectures and subsequently embedding the research, development, and licensing costs of these technologies into their multi-billion-dollar government contracts.[1] They are effectively charging the American taxpayer for intellectual property that the government already possesses the legal right to utilize indefinitely and without cost.[1]

This scenario transcends standard patent infringement; it borders on procurement fraud, waste, and abuse of federal funds.[1] Failing to halt the disbursement of funds to these contractors for pre-licensed intellectual property constitutes complicity in corporate intellectual property theft and a gross mismanagement of taxpayer dollars.[1]

II. Satisfaction of DFARS 227.7004 Administrative Claim Requirements

ISBN 9781971481296

To compel immediate administrative intervention, this communication strictly adheres to the requirements of DFARS 227.7004(a) and (b):[1]

1. **Allegation of Infringement:** We formally allege that the systems provided by Palantir Technologies and Anduril Industries directly infringe upon the patent applications detailed below.[1]
2. **Request for Compensation:** Because the government holds a free license to this portfolio, our request for compensation is a formal legal demand that the DoD immediately cease compensating the infringing contractors for the licensed intellectual property.[1]
3. **Citation of Patents:** The infringed applications include USPTO 19/639,219; 19/640,945; 19/560,038; 19/560,065; 19/559,957; 19/559,873; and 19/559,842.[1]
4. **Identification of Procurements:** See Section III below for the specific systems and contracting activities.[1]
5. **Element-by-Element Comparison:** The required claim maps demonstrating precisely how the representative claims map to the accused software and processes are attached to this verified transmission.[1]

III. Technological Nexus and Targeted Procurements

The operational methodologies of Palantir Technologies and Anduril Industries intersect directly with these proprietary claims, making their government contracts highly susceptible to this administrative review.[1]

A. Palantir Technologies (Project TITAN & Project Maven)

Responsible Activities: Army Contracting Command - APG (Belvoir Division) & National Geospatial-Intelligence Agency / CDAO[1] **Notified PCOs/Directors:** William A. Creech, Mia A. Steele, Tamara N. Jenkins, Undra Robinson, Emely Winnert, and Jonathan Elliott.[1]

Palantir's flagship platforms, Gotham and Foundry, specialize in integrating massive datasets to construct complex dependency graphs utilized by intelligence agencies.[1]

- **USPTO 19/559,957 (Power Holder Analysis in Social Networks):** Palantir's analytical methodologies for Project TITAN and Project Maven directly mirror our systemic method for analyzing network dependency graphs to identify indispensable bottlenecks.[1]
- **USPTO 19/559,873 (Information Leak-Proofing of Organizations):** Palantir's internal security infrastructure infringes upon our method of calculating precise "blast radius" vulnerability scores for individual users.[1]

ISBN 9781971481296

B. Anduril Industries (Collaborative Combat Aircraft & Ghost Drones)

Responsible Activities: Air Force Life Cycle Management Center (AFLCMC) & U.S. Special Operations Command (USSOCOM)[1] **Notified PCOs:** AFLCMC General Contracting Office[1]

Anduril relies heavily on Lattice OS to formulate a real-time command and control center for autonomous systems.[1]

- **USPTO 19/559,842 (Coordinated Dual-Vehicle Scanning):** The deployment of autonomous, multi-modal surveillance systems operating in tandem is heavily encumbered by our patent, which explicitly claims the methodology for coordinating multiple scanning vehicles via a secure link to fuse multi-spectral data.[1]
- **USPTO 19/560,065 (Autonomous Robotic Data Logistics):** Anduril's operations in contested environments intersect directly with our claimed mechanisms for using autonomous robotic units to physically retrieve and transport high-capacity data payloads.[1]

IV. Immutable Audit Trail and Mandatory Administrative Action

This formal claim is delivered via Registered Email (RPost). This service provides an immutable, cryptographically verified audit trail, including proof of delivery, message content, and the exact official time of sending and opening.[1]

By delivering this DFARS-compliant claim via RPost, we establish undeniable "Actual Notice" under 35 U.S.C. § 154(d).[1] More importantly, this verified delivery strips the targeted military and civilian agencies of "plausible deniability."[1]

As warranted Procuring Contracting Officers, if you receive cryptographically verified proof that a contractor is charging the government for freely available intellectual property, your failure to initiate an audit or halt payments leaves a permanent digital footprint of your inaction.[1] This exposes you, as individual officials, to severe administrative, ethical, and potentially criminal liability for gross negligence, dereliction of duty, or complicity in procurement fraud.[1]

Pursuant to federal acquisition regulations, you are hereby mandated to halt the assumption of clear title, freeze approvals related to the disputed intellectual property, and forward this communication immediately to the Chief of the Intellectual Property Law Division (JALS-IP) within your respective military branches.[1]

Govern yourselves accordingly.

REGISTERED EMAIL™ | CERTIFIED DELIVERY

This is a Registered Email™ message from **RJ Aguiar**.

Dear Mr. Stanley, Secretary Hegseth, and Mr. Michael:

This comprehensive administrative and technical disclosure is officially executed and served upon you in your formal capacities within the United States Department of Defense (DoD). This document constitutes a new, unified **Formal Administrative Claim for Patent Infringement under DFARS 227.7004**, a **Notice of Perpetual No-Fee License Grant**, and a formal **Notice of Potential Retaliatory Mechanisms** intersecting with critical defense procurement infrastructure.

I. Formal Administrative Claim under DFARS 227.7004: JADC2 Tactical Nexus

We formally allege that the Joint All-Domain Command and Control (JADC2) architectures, satellite communications, troposcatter modules, point-to-point radio frequency (RF) frameworks, and cryptographic data fabrics currently being commercialized and deployed by **Lockheed Martin Corporation**—and integrated alongside cloud architectures managed by **Microsoft Azure**, **Amazon AWS**, **Palantir Technologies**, and **Anduril Industries**—directly infringe upon the foundational patent applications compiled within the Aguiar Marcano Intellectual Property Portfolio (ISBN 9781971481296).

The targeted procurements natively intersect with the following core tracks of the **JADC2 data fabric** and distributed telecommunications arrays:

A. The Cryptographic Paradigm Shift: Elimination of the "Key-First" Bottleneck

Modern tactical networks are fundamentally constrained by sequential, "key-first" handshakes (e.g., traditional TLS/SSL frameworks), making them highly vulnerable to real-time Man-in-the-Middle (MITM) interception and traffic analysis. The following inventions completely render the legacy binary "key-first" paradigm obsolete by decoupling the data payload from synchronous key exchanges:

- **USPTO # 19/645,371 (Secure Communication via Receiver-Generated Key Seeds):** Inverts the traditional key exchange by having the intended receiver generate and push single-use key seeds over an uplink, ensuring the final message encryption key is never transmitted across the vulnerable downlink channel.

- **USPTO # 19/640,945 (Asynchronous Secure Communication with Post-Hoc Key Derivation):** Breaks temporal predictability by splitting transmissions into three asynchronous parts (Prefix, Message, Suffix) across separate paths, deriving the final decryption key post-hoc only after complete block concatenation.
- **USPTO # 19/658,570 (Geographical and Orientation-Based Encryption Seeds):** Utilizes real-time GNSS coordinates and IMU digital compass orientations relative to Magnetic North as continuous, high-fidelity physical entropy sources to generate keys immune to timestamp-based prediction.
- **USPTO # 19/640,973 & # 19/561,259 (Secure Parametric Network Protocol with Rotating Encoding Maps):** Enforces end-to-end forward secrecy across routed, multi-hop networks by utilizing disposable, time-variant encoding maps that rotate mid-session based on packet thresholds, preventing retrospective decryption of captured traffic.
- **USPTO # 19/658,572 (System and Method for Encrypted Keyboard Events):** Encrypts each individual keystroke event independently as a distinct ciphertext, defeating acoustic side-channel leaks and machine-learning-driven text structure analysis.

B. High-Radix, Post-Binary Tactical Communications

- To bypass the bandwidth and physical bottlenecks of serial binary serialization, the following technologies define a native, high-radix physical and data-link layer, processing abstract mathematical "recipes" and symbolic multi-state signals instead of standard bits:
- **USPTO # 19/639,265 (High-Radix and Parametric Satellite Communication System):** Modulates Earth-to-space and space-to-Earth RF links into N discrete, distinguishable physical states ($N > 2$) to optimize satellite transponder throughput.
- **USPTO # 19/639,272 (Adaptive High-Radix and Parametric Troposcatter Communication System):** Dynamically adjusts the channel radix (N) in real-time based on tropospheric fading and multipath metrics, scaling data density constructively.
- **USPTO # 19/639,255 (High-Radix and Parametric Cellular Communication System):** Implements post-binary symbolic data transport across wireless cellular segments natively.
- **USPTO # 19/639,258 (High-Radix and Parametric Point-to-Point RF Communication System):** Establishes fixed, line-of-sight wireless backhaul links operating on high-cardinality symbol maps.
- **USPTO # 19/638,466 (Secure Communication Using Covert Side-Channels Embedded in a High-Cardinality Stream):** Embeds logical side-channels (e.g., spatial positioning) within a primary optical or RF stream, phase-shifting key data relative to the primary payload via a pseudo-random offset.

C. Advanced Cryptanalysis, Data Logistics, and Signal De-Anonymization

- **USPTO # 19/645,192 (Accelerated Prime Number Generation via Modular Signal Analysis):** Partitions massive integer space into shards, mapping remainders to multi-state digital signals to detect "prime oases" and accelerate key generation.
- **USPTO # 19/645,194 (Cryptanalysis Based on Parametric Denoising of a Public Key):** Treats a public key as a noisy signal, applying parameterized modular filters to eliminate "impossible overlaps" and rapidly isolate prime factors.
- **USPTO # 19/559,656 (Covert Communication via Satellite Vision Systems):** Utilizes synchronized ground arrays to embed data-rich visual patterns directly into the imagery captured by non-cooperative orbital observation platforms.
- **USPTO # 19/559,972 (Communication via Passive Reflection from Non-Cooperative Orbiting Objects):** Employs an automated kinematic engine to map Low Earth Orbit (LEO) satellite trajectories, using their physical chassis as passive RF mirrors to bounce over-the-horizon signals without their active participation.
- **USPTO # 19/559,608 (Method and System for a Geo-Indexing Covert Ledger):** Formulates an identity-agnostic distributed ledger by encoding transactional units as out-of-range coordinate transformations mapped directly to public real estate metadata.
- **USPTO # 19/571,566 (De-Anonymizing Radio Frequency Signals via a Distributed Sensor Array):** Analyzes Time of Arrival (ToA) differentials across an array of passive sensors to derive precise directional vectors, matching transmissions with telecom provider event logs to de-anonymize encrypted streams.

II. Notice of Perpetual, Irrevocable Grant to the U.S. Federal Government

As explicitly hardcoded within the legal text of the underlying patent applications (compiled under ISBN

9781971481296), the Primary Inventor has proactively executed a **perpetual, irrevocable, worldwide, royalty-free, non-exclusive license grant** to the United States Federal Government and its defense and national security components for all sovereign defense purposes.
Because the U.S. Government possesses an absolute, zero-cost right to practice, implement, and deploy these high-radix and parametric cryptographic architectures natively, the financial implications for the national defense budget are substantial. The Department is legally unencumbered by private commercial royalty streams for any systems utilizing these "recipes" for JADC2 data-routing optimization.

III. Notice of Potential Retaliatory Mechanisms & Sovereign Interception Risks

Pursuant to the clinical logs detailed in *"The Capias and the F-35 Program"* (ISBN 9781105250286), a severe chronological alignment exists between the submission of formal DFARS disclosures and the immediate deployment of localized penal mechanisms.

Chronological Causality Tracking: On April 17, 2026, the Primary Inventor transmitted formal DFARS 227.7004 claims to the Pentagon. On the immediate next business day (April 21, 2026), adversarial counsel representing local domestic relations tracks abruptly accelerated a highly anomalous property discovery track. This track explicitly targeted the forced conversion and physical surrender of the independent corporate computing hardware containing the primary source-code keys to these exact patent applications.

Because these private actors are deeply intertwined with cloud, analytical, and logistics infrastructure managed across prime defense contractors—including **Palantir**, **Anduril**, **Lockheed Martin**, **Microsoft Azure**, and **Amazon AWS**—any un-audited attempt to seize or compromise the physical hardware holding these cryptographic source keys introduces a severe risk of data spoliation, unauthorized tech-transfer, and a direct threat to the financial and technological sovereignty of the U.S. government's pre-licensed asset.

IV. Constructive Requisition for a Procurement Audit

This notice is submitted in a constructive, non-adversarial posture designed explicitly to safeguard the integrity of the Department, the taxpayers, and the defense industrial base. It is in the shared interest of all stakeholders—including the defense primes—to ensure complete regulatory clarity.

If prime contractors are embedding the research, development, or licensing costs of these high-radix, post-binary, or asynchronous communication mechanisms into multi-billion-dollar federal procurement tracks, the government is effectively being billed for intellectual property it already holds a free, perpetual license to utilize.

Therefore, we respectfully request that the **Chief Digital and Artificial Intelligence Office (CDAO)**, alongside the **Intellectual Property Law Division (JALS-IP)**, initiate a targeted procurement audit of active JADC2 and communication modernized contracts to verify cost-accounting lines, enforce compliance with the government's native license, and protect the public archives from asymmetric exploitation.

Respectfully submitted,

Reinaldo J. Aguiar Marcano
Primary Inventor / Relator Pro Se

RE: ACTUAL KNOWLEDGE OF PATENT INFRINGEMENT (35 U.S.C. § 154(d)), INITIATION OF DFARS 227.7004 ADMINISTRATIVE CLAIM, AND NOTIFICATION OF POTENTIAL PROCUREMENT FRAUD BY LOCKHEED MARTIN CORPORATION

DATE: April 17, 2026

DELIVERY METHOD: Cryptographically Verified via Registered Email (RPost)

DEAR:

Lt. Gen. Schmidt and the F-35 JPO Contracting Directorate,

ISBN 9781971481296

This comprehensive technical and legal brief is served upon you in your official capacities within the United States Department of Defense (DoD).

This document constitutes a formal Administrative Claim for Patent Infringement under the Defense Federal Acquisition Regulation Supplement (DFARS) 227.7004. The purpose of this claim is to notify the United States Government of a highly anomalous and legally precarious situation involving the unauthorized commercialization of a foundational patent portfolio by Lockheed Martin Corporation.

I. THE U.S. DEPARTMENT OF DEFENSE LICENSE GRANT AND STRATEGIC BLOCKADE

Under standard operating procedures defined by 28 U.S.C. § 1498, the United States Government exercises eminent domain over domestic patents, shielding its defense contractors from civil injunctions and assuming financial liability for infringement.

However, the inventor of the Aguiar Marcano Intellectual Property Portfolio—which comprises 52 foundational patent applications published defensively in *The Architecture of Control* (ISBN 978-1-97-148129-6)—has proactively granted an irrevocable, perpetual, no-fee license to the federal government for all national defense purposes. The United States Department of Defense, specifically through Under Secretary of Defense Emil Michael, has been placed on direct notice of this license grant and is the designated authority administering this license on behalf of the military.

Lockheed Martin is currently utilizing these specific patented architectures to overcome severe computational bottlenecks in their aerospace and quantum programs. By embedding the research, development, and licensing costs of these technologies into multi-billion-dollar government contracts, Lockheed Martin is effectively charging the American taxpayer for intellectual property that the government already possesses the legal right to utilize indefinitely and without cost. Failing to halt the disbursement of funds to this contractor for pre-licensed intellectual property constitutes a gross mismanagement of taxpayer dollars.

II. Satisfaction of DFARS 227.7004 Administrative Claim Requirements

To compel immediate administrative intervention, this communication strictly adheres to the requirements of DFARS 227.7004(a) and (b):

1. **Allegation of Infringement:** We formally allege that the systems provided and developed by Lockheed Martin directly infringe upon the patent applications detailed

ISBN 9781971481296

below.

2. **Request for Compensation:** Because the government holds a free license to this portfolio, our request for compensation is a formal legal demand that the DoD immediately cease compensating Lockheed Martin for the licensed intellectual property.

3. **Citation of Patents:** The infringed applications include USPTO 19/639,219; 19/560,038; 19/562,838; and 19/562,845.

4. **Identification of Procurements:** See Section III below for the specific systems and contracting activities.

5. **Element-by-Element Comparison:** The required claim maps demonstrating precisely how the representative claims map to the accused software and processes are attached to this verified transmission.

III. Technological Nexus and Targeted Procurements

Lockheed Martin's most critical modernization efforts intersect directly with our proprietary claims, making their government contracts highly susceptible to this administrative review.

A. F-35 Technology Refresh 3 (TR-3) and the Integrated Core Processor

Responsible Activity: F-35 Joint Program Office (JPO)

The TR-3 upgrade is designed to modernize the computational core of the F-35 via a new L3Harris integrated core processor and a new aircraft memory unit, promising a 25x computing increase. Attempting to achieve this massive increase in computational throughput within the strict thermal and weight constraints of an airborne fighter requires abandoning traditional electrical data buses.

- **USPTO 19/560,038 (Optical Computing Architecture) & USPTO 19/562,838 (Energy-Efficient Computing via Clock Speed Reduction):** These patents define a holistic data fabric that replaces electrical I/O bottlenecks with a massively parallel optical interconnect, enabling a reduction in clock speed while maintaining high throughput. Any TR-3 processor upgrades utilizing internal optical data buses to mitigate thermal output directly infringe upon these hardware claims.

- **USPTO 19/639,219 (Central Processing Unit Architecture for Native Parametric and Symbolic Computation):** Upgrading the F-35's core processing capabilities to handle

ISBN 9781971481296

advanced sensor fusion natively relies upon our parametric high-radix architecture.

B. Strategic Quantum Computing and QML Partnerships

Responsible Activity: Lockheed Martin Research and Technology / Defense Innovation Unit (DIU)

Target Leadership: Craig Martell (CTO) and Valerie Browning (VP, Research & Technology)

Lockheed Martin is aggressively pursuing quantum technologies for aerospace and defense, recently signing strategic collaborations with PsiQuantum (November 2025), Xanadu (February 2026), and Fujitsu (February 2026). These partnerships focus on deploying fault-tolerant quantum algorithms, Quantum Machine Learning (QML), and dual-use AI/ML edge computing.

- **USPTO 19/562,845 (Physically Disaggregated Computing Systems):** To achieve the hybrid quantum-classical workflows required by these new partnerships, Lockheed Martin must utilize a disaggregated architecture where classical GPUs and quantum processing units (QPUs) are segregated yet interconnected via an ultra-high-bandwidth data fabric. This exact hybrid integration model is legally encumbered by our portfolio.

IV. Statutory and Ethical Mandates

Because Lockheed Martin operates as a publicly traded corporate entity bound by strict compliance and ethical frameworks, we must formally remind your corporate leadership and legal counsel of the following obligations:

1. SEC Disclosure Requirements for Public Companies

For Lockheed Martin Corporation, we remind you that if you find yourselves potentially infringing any of the Inventions covered in this intellectual property portfolio, you are legally obligated to assess whether it is necessary to notify your investors and file a material risk disclosure notice with the Securities and Exchange Commission (SEC). The failure to disclose a material intellectual property encumbrance that threatens your core aerospace platforms (such as the F-35) constitutes a severe breach of fiduciary duty.

2. Attorney Ethical Obligations (Model Rule 8.3)

A direct reminder is issued to the Chief Legal Officers, General Counsels, and all retained outside counsel receiving or reviewing this notice (including Kevin J. O'Connor): You are strictly bound by your ethical obligations, including ABA Model Rule of Professional Conduct 8.3. You maintain an affirmative obligation to report any unprivileged knowledge of wrongdoing that raises a substantial question as to a lawyer's honesty, trustworthiness, or fitness. If your internal audits reveal evidence of coordinated intellectual property theft or procurement fraud that

ISBN 9781971481296

may compromise the integrity of a court, you are ethically mandated to report such conduct to the appropriate professional authorities.

V. Immutable Audit Trail and Mandatory Administrative Action

This formal claim is delivered via Registered Email (RPost). This service provides an immutable, cryptographically verified audit trail, including proof of delivery, message content, and the exact official time of sending and opening.

As warranted Procuring Contracting Officers, if you receive cryptographically verified proof that a contractor is charging the government for freely available intellectual property, your failure to initiate an audit or halt payments leaves a permanent digital footprint of your inaction. This exposes you to severe administrative and potentially criminal liability for complicity in procurement fraud.

Pursuant to federal acquisition regulations, you are hereby mandated to freeze approvals related to the disputed intellectual property, halt the assumption of clear title for the F-35 TR-3 upgrades, and forward this communication immediately to the Intellectual Property Law Division of your respective branches.

V/R,

Reinaldo Aguiar Marcano

Date: May 7, 2026

Subject: Notice of Potential Infringement of U.S. Patent Applications and Notice of Actual Knowledge

Dear Mr. Harris and Mr. Cardaci,

This letter serves as a formal notice of potential infringement of several of my U.S. patent applications. It has come to my attention that activities associated with Space Exploration Technologies Corp. ("SpaceX"), particularly regarding its satellites and devices used to launch said satellites, may be infringing upon my intellectual property rights.

The following U.S. patent applications, among others in my portfolio, are believed to be relevant to these activities:

- **USPTO Application No. 19/559,745:** System and Method for Covert Communication Using Arrangements of Satellite-Observable, Distinctively Colored Objects
- **USPTO Application No. 19/559,656:** Method for Covert Communication via Satellite Vision Systems
- **USPTO Application No. 19/639,265:** A High-Radix and Parametric Satellite Communication System
- **USPTO Application No. 19/559,972:** METHOD AND SYSTEM FOR COMMUNICATION VIA PASSIVE REFLECTION FROM NON-COOPERATIVE ORBITING OBJECTS
- **USPTO Application No. 19/658,570:** METHOD AND SYSTEM FOR GEOGRAPHICAL AND ORIENTATION-BASED ENCRYPTION SEEDS

These applications describe novel methods and systems for satellite communication, covert signaling, and encryption. Given the nature of SpaceX's operations, there is a strong basis to believe that technologies infringing upon one or more of these pending patents are being employed.

Furthermore, please be advised that attached to this email is the complete portfolio of my inventions, which has also been published in a printed book under the title "ISBN 9781971481296 Portfolio of Patent Applications Submitted to the USPTO." This transmission constitutes a formal Notice of Actual Knowledge of the entire contents of the attached book and the patent applications contained therein.

This letter serves as a good faith effort to inform SpaceX of my intellectual property rights. I am open to discussing licensing terms for the use of my patented technologies. As a condition of any such license, I would require that the nexus properties (satellites and launch devices) be clearly and publicly marked with the corresponding USPTO Patent Application number(s) or my name as the inventor. The marking must be placed in public view and occupy at least 3% of the visible surface of the property.

I expect a prompt and substantive response to this notice within fifteen (15) business days. Failure to respond may result in further legal action to protect my intellectual property rights.

This letter is not a complete statement of my rights in connection with this matter and is without prejudice to any of my rights and remedies, all of which are hereby expressly reserved.

Sincerely,

s/Reinaldo Aguiar Marcano/

To: The European Patent Office
Attn: Directorate-General 1 (Patent Granting Process)
ICT Technical Cluster / Computing Division
80298 Munich, Germany

Date: April 7, 2026

Dear Vice President Rowan and Director Philpott,

I am writing to you in my capacity as a technologist, former Google Search Ranking engineer, and recognized political refugee under the 1951 Refugee Convention. This letter serves as form foundational body of intellectual property that has been placed into the public domain as a **defensive publication** to establish definitive prior art in the fields of high-performance computing, communications, and optical data transmission.

1. Scope of the Disclosure The published portfolio, titled *"Be Water, Be Light: Portfolio of Patent Applications Submitted to the USPTO"* (ISBN: 978-1-97-148129-6), documents a compreh architecting of computing infrastructure. Key technical disclosures include:

- **High-Radix Physical Layer Encoding:** A method for post-binary data representation using N discrete physical states (N>2).
- **Optically-Native CPU Architecture:** A system for native parametric and symbolic computation that eliminates premature numerical evaluation and fixed-width binary bottlenecks.
- **Massively Parallel Optical Interconnects:** A "photon-native" solution for data transmission using light frames where each pixel acts as an independent channel, enabling terabit-per-s
- **Disaggregated Data Centers:** Methods for dynamically composing bare-metal computer resources from independent pools of CPUs and memory via an optical fabric.

2. Legal Priority and Public Record The thirty-three patent applications compiled in this record were formally filed with the United States Patent and Trademark Office (USPTO) between M **March 9, 2026**. This technical record pre-dates current filing cycles for advanced satellite constellations and AI-optimized semiconductor architectures initiated in the second quarter of 2026 (ISBN: 978-1-97-148129-6) was accepted for publication on the yearly journal "The International Journal of Law, Ethics, and Technology" (please see acceptance email below).

3. Strategic National Security Status Recognizing the foundational nature of these inventions for quantum computing clusters and national defense, I have granted a **perpetual, no-fee, wo** to the United States Federal Government for all governmental and defense purposes. This effectively designates this IP as a strategic asset.

4. Request for Action Under the provisions of the European Patent Convention regarding the search for **Non-Patent Literature (NPL)**, I request that this 721-page specification be indexed v internal databases. This will ensure that your examiners, particularly within Technical Clusters **G06F** and **H04L**, cite this work as prior art during the examination of any applications related to high-radix computing, or satellite-to-ground covert communications.

Be advised that major international legal representatives (including **Quinn Emanuel Urquhart & Sullivan**) have been formally notified of this disclosure and its implications for the product r clients in the semiconductor and telecommunications sectors.
I remain available to provide the full high-resolution digital version of record to your technical reviewers upon request.

Respectfully,

Reinaldo J. Aguiar Marcano
Forensic Systems Architect

Dear Vice President Rowan and Director Philpott,

I am writing to you in my capacity as a technologist, former Google Search Ranking engineer, and recognized political refugee under the 1951 Refugee Convention. This letter serves as formal notice of a foundational body of intellectual property that has been placed into the public domain as a **defensive publication** to establish definitive prior art in the fields of high-performance computing, satellite communications, and optical data transmission.

1. Scope of the Disclosure The published portfolio, titled *"Be Water, Be Light: Portfolio of Patent Applications Submitted to the USPTO"* (ISBN: 978-1-97-148129-6), documents a comprehensive re-architecting of computing infrastructure. Key technical disclosures include:

- **High-Radix Physical Layer Encoding:** A method for post-binary data representation using N discrete physical states (N>2).
- **Optically-Native CPU Architecture:** A system for native parametric and symbolic computation that eliminates premature numerical evaluation and fixed-width binary bottlenecks.
- **Massively Parallel Optical Interconnects:** A "photon-native" solution for data transmission using light frames where each pixel acts as an independent channel, enabling terabit-per-second throughput.

- **Disaggregated Data Centers:** Methods for dynamically composing bare-metal computer resources from independent pools of CPUs and memory via an optical fabric.

2. Legal Priority and Public Record The thirty-three patent applications compiled in this record were formally filed with the United States Patent and Trademark Office (USPTO) between **March 6 and March 9, 2026.** This technical record pre-dates current filing cycles for advanced satellite constellations and AI-optimized semiconductor architectures initiated in the second quarter of 2026**.** This publication (ISBN: 978-1-97-148129-6) was accepted for publication on the yearly journal "The International Journal of Law, Ethics, and Technology" (please see acceptance email below).

3. Strategic National Security Status Recognizing the foundational nature of these inventions for quantum computing clusters and national defense, I have granted a **perpetual, no-fee, worldwide license** to the United States Federal Government for all governmental and defense purposes. This effectively designates this IP as a strategic asset.

4. Request for Action Under the provisions of the European Patent Convention regarding the search for **Non-Patent Literature (NPL).** I request that this 721-page specification be indexed within the EPO's internal databases. This will ensure that your examiners, particularly within Technical Clusters **G06F** and **H04L**, cite this work as prior art during the examination of any applications related to optical buses, high-radix computing, or satellite-to-ground covert communications.

Be advised that major international legal representatives (including **Quinn Emanuel Urquhart & Sullivan**) have been formally notified of this disclosure and its implications for the product roadmaps of their clients in the semiconductor and telecommunications sectors.
I remain available to provide the full high-resolution digital version of record to your technical reviewers upon request.

Respectfully,

Reinaldo J. Aguilar Marcano

This Registered Receipt™ email is verifiable proof of your Registered Email™ transaction. It contains:

1. An official time stamp.
2. Proof that your message was sent and to whom it was sent.
3. Proof that your message was delivered to its addressees or their authorized electronic agents.
4. Proof of the content of your original message and all of its attachments.

Note: By default, RPost does not retain a copy of your email or this receipt and you should not rely on the information above until the receipt is verified by the RMail system. Keep this email and its attachment in place for your records. General terms and conditions are available at Legal Notice. RMail services are patented, using RPost patented technologies, including US patents 8209389, 8224913, 8468199, 8161104, 8468198, 8504628, 7966372, 6182219, 6571334 and other US and non-US patents listed at RPost Communications.

Receipt: [Lockheed-Martin] FORMAL ADMINISTRATIVE CLAIM FOR PATENT INFRINGEMENT UNDER DFARS 227.7004 AND NOTIFICATION OF PROCUREMENT IRREGULARITIES CONCERNING PERPETUALLY LICENSED TECHNOLOGIES (Delivery Failure)

1 message

Receipt <receipt@r1.rpost.net> Fri, Apr 17, 2026 at 11:54 AM
To: rj.aguiar.m+legal-notice@gmail.com

REGISTERED RECEIPT
EVIDENCE OF DELIVERY, CONTENT & TIME
RMail

This receipt contains verifiable proof of your RPost transaction.
The holder of this receipt has proof of delivery, message and attachment content, and official time of sending and receipt. Depending on services selected, the holder also may have proof of encrypted transmission and/or electronic signature.

To authenticate this receipt, forward this email with its attachment to 'verify@r1.rpost.net' or click here

This Registered Receipt™ email is verifiable proof of your Registered Email™ transaction. It contains:

1. An official time stamp.
2. Proof that your message was sent and to whom it was sent.
3. Proof that your message was delivered to its addressees or their authorized electronic agents.
4. Proof of the content of your original message and all of its attachments.

Note: By default, RPost does not retain a copy of your email or this receipt and you should not rely on the information above until the receipt is verified by the RMail system. Keep this email and its attachment in place for your records. General terms and conditions are available at Legal Notice. RMail services are patented, using RPost patented technologies, including US patents 8209389, 8224913, 8468199, 8161104, 8468198, 8504628, 7966372, 6182219, 6571334 and other US and non-US patents listed at RPost Communications.

REGISTERED EMAIL™ | CERTIFIED DELIVERY

This is a Registered Email™ message from **RJ Aguiar**.

Dear Mr. Stanley, Deputy Secretary Feinberg, and Secretary Hegseth,

CLARIFYING DECLARATION OF STRUCTURAL SCOPE & SEPARATION CRITICAL NOTICE OF ADMINISTRATIVE BOUNDARY

This administrative filing is entirely separate and legally distinct from any prior claims submitted regarding aerospace platform integrators or operational logistics networks (including Lockheed Martin Corporation, Palantir Technologies, or Anduril Industries).

This submission targets a fundamental structural bottleneck: **the underlying hardware processing layers, high-radix microelectronics, and architectural computing assumptions deployed inside the Department's centralized heavy-compute initiatives.**

The sole targets of this specific patent infringement inquiry and technical sovereignty review are **NVIDIA Corporation** and **Intel Federal LLC**. Previous administrative filings are referenced herein exclusively to preserve chronological data continuity and formal notice trails.

I. TIERED ACTION LINE & OVERSIGHT ROUTING

To prevent the administrative dilution of responsibility and establish absolute accountability regarding a multi-billion-dollar technology footprint, the delivery layout of this document is tiered strictly by statutory duty:

- **Programmatic & Technical Intake Execution:** Directed to **Mr. Cameron Stanley**, Chief Digital and Artificial Intelligence Officer (CDAO), as the primary operational authority over the Department's unified strategic agreements to scale advanced generative capabilities across classified networks.
- **Macro-Procurement & Supply Chain Integrity:** Directed to **Deputy Secretary Steve Feinberg**, as the Department's Chief Operating Officer, to evaluate systemic fiscal irregularities, hardware procurement tracking, and defense industrial base vulnerabilities.
- **Ultimate National Command Accountability:** Directed to **Secretary Pete Hegseth**, who holds ultimate statutory responsibility for maintaining the United States' asymmetric military and technological dominance.
- Affected semiconductor manufacturers, corporate counsels of record, and congressional oversight nodes are concurrently appended to the **CC** field to ensure absolute transparency and legislative awareness of the technical risks detailed below.

cc: emil.michael@mail.mil, jensen.huang@nvidia.com, lip-bu.tan@intel.com, investor.relations@intel.com, ir@nvidia.com, brian@anduril.com, akarp@palantir.com, kevin.j.oconnor@lmco.com, mike.rogers@mail.house.gov

II. THE CRITICAL NEXUS: COMPUTING POWER DOMINANCE VS. ADVERSARIAL ACQUISITION

This administrative claim expands beyond the localized boundaries of the Joint All-Domain Command and Control (JADC2) data fabric into a macro-strategic warning regarding **Global Computing Power Dominance**. The technical nexus of this claim is divided into two distinct strategic realities:

A. The Structural Obsolescence of Legacy Silicon

The heavy compute systems currently being scaled across the Department's classified networks—including NVIDIA Corporation's H100/B200 NVL74 Blackwell architectures and Intel Federal LLC's specialized microprocessor arrays—are bound to legacy, synchronous binary computing models. These legacy chips are approaching physical scaling limitations and are fundamentally constrained by copper bus layouts and traditional heat/power dissipation thresholds.

The proprietary architectures compiled within the *Aguiar Marcano Intellectual Property Portfolio* (ISBN 9781971481296) completely shift the physical and data-link layers into an **asynchronous, post-binary parametric model** utilizing ultra-wide data buses, high-radix computing, disaggregated computing arrays, and opticallynative hardware architectures.

B. The Asymmetric Decryption & Technology Capture Threat

The deployment of these high-radix optical computing architectures creates an immediate asymmetric threat vector to legacy DoD cryptography. Traditional frameworks operate on a "key-first" paradigm, requiring complete cryptographic handshake cycles to be synchronized before data moves.

Our portfolio renders this assumption obsolete by shifting computing into a post-binary parametric series. A computer built natively on these optical inventions possesses the mathematical cardinality and parallel throughput to execute brute-force decryption vectors that render legacy silicon-based secure communications obsolete.

The Asymmetric Geopolitical Threat Vector

The primary national security concern is not merely the commercial misappropriation of intellectual property by domestic contractors; it is **the risk of secondary adversarial implementation**.

Because the Primary Inventor has granted the United States Federal Government a **perpetual, irrevocable, worldwide, royalty-free, non-exclusive license** to practice these inventions natively for national defense, the U.S. military possesses an absolute, zero-cost right to construct and control this next-generation computing tier.

However, if a foreign state actor or peer adversary misappropriates these structural "recipes" and constructs a high-radix optical compute network *before* the Department of Defense transitions away from legacy silicon, the United States' military technological dominance will face a structural surprise. The encryption mechanisms protecting current multi-billion-dollar defense arrays could be completely compromised by an adversary operating on an optically-native computing layer.

III. SATISFACTION OF DFARS 227.7004 REQUISITES & PROPRIETARY ARCHITECTURES

We formally allege that the underlying computing frameworks, high-speed memory interfaces, and parallel routing arrays utilized by NVIDIA Corporation and Intel Federal LLC to fulfill CDAO strategic agreements directly replicate or infringe upon the following patent applications, with particular emphasis on the foundational optical signaling layer:

A. The Architectural Cornerstone

- **USPTO # 19/559,705:** High-Bandwidth, Low-Latency Optical Data Cable and Transmission Protocol *(The foundational interconnect mechanism rendering traditional copper data bus lane limits obsolete).*

B. High-Radix Processing & "Just-in-Time" Compute Fabrics

- **USPTO # 19/638,192:** Apparatus and Method for an Ultra-Wide Data Bus Architecture via Parametric Encoding
- **USPTO # 19/638,176:** Method and Apparatus for High-Radix Number Representation Using Parametric Series
- **USPTO # 19/638,180:** System and Method for High-Precision Fractional Number Representation in a Digital Computing System
- **USPTO # 19/639,219:** A Central Processing Unit Architecture for Native Parametric and Symbolic Computation
- **USPTO # 19/639,245:** A Method and System for High-Radix Physical Layer Data Encoding and Representation
- **USPTO # 19/639,222:** A Memory System for the Storage and Retrieval of Parametric and Symbolic Data Representations
- **USPTO # 19/639,271:** A High-Radix Mass Storage System
- **USPTO # 19/639,220:** Method and System for High-Radix Data Representation Using Parametric Mathematical Encoding
- **USPTO # 19/639,253:** A Protocol Stack and System for Parametric Data Networking

C. Massively Parallel Optical Interconnects & Native Hardware

- **USPTO # 19/560,041:** Apparatus and Method for Physical Transmission of Spatially-Encoded Optical Data
- **USPTO # 19/560,037:** Optical Memory Bus and Interface for High-Bandwidth Memory Access
- **USPTO # 19/560,038:** Optical Computing Architecture and System
- **USPTO # 19/560,033:** Active Optical Data Cable System with Integrated Processing Unit
- **USPTO # 19/560,031:** Method and System for Pixel-Based Network Routing in a Massively Parallel Optical Interconnect
- **USPTO # 19/562,818:** Apparatus for a Massively Parallel Optical Data Bus Architecture
- **USPTO # 19/562,822:** Apparatus for a Reconfigurable-Width Optical Bus
- **USPTO # 19/562,825:** System for an Optically-Native Central Processing Unit / Wavelength-Discriminating Phototransistors
- **USPTO # 19/562,829:** Method for High-Radix Computing via Optical Bus
- **USPTO # 19/562,838:** Method for Energy-Efficient Computing via Clock Speed Reduction
- **USPTO # 19/562,841:** Asynchronous Optical Computing System
- **USPTO # 19/562,844:** Method for Performance Benchmarking for Parallel Architectures
- **USPTO # 19/562,845:** A Physically Disaggregated Computing System
- **USPTO # 19/562,847:** Apparatus for an Optical Data Fabric Switch
- **USPTO # 19/562,853:** Method for Dynamic Composition of Bare-Metal Computing Resources
- **USPTO # 19/562,855:** System for a Data Center Architecture with Functionally Segregated Resource Pools
- **USPTO # 19/561,200:** Method for Generating a Channel-Optimized Data Encoding Map
- **USPTO # 19/561,223:** System and Method for N-Gram Parallel Data Encoding
- **USPTO # 19/561,228:** Method for Legacy Protocol Tunneling Over a High-Cardinality Interface
- **USPTO # 19/561,236:** Protocol for Physical and Data-Link Layer Encoding Negotiation
- **USPTO # 19/560,061:** Optically-Attached Storage (OAS) Apparatus and System
- **USPTO # 19/560,062:** Portable Data Cartridge with Optical Interface

D. Decoupled Asynchronous Cryptography (Secondary Focus Layer)

- **USPTO # 19/640,945:** A Method for Asynchronous Secure Communication with Post-Hoc Key Derivation
- **USPTO # 19/640,973:** A Secure Parametric Network Protocol with Rotating Encoding Maps for Forward Secrecy
- **USPTO # 19/561,259:** Protocol for Encoding Map Rotation for Forward Secrecy
- **USPTO # 19/645,371:** Secure Communication via Receiver-Generated Key Seeds
- **USPTO # 19/658,570:** Method and System for Geographical and Orientation-Based Encryption Seeds
- **USPTO # 19/658,569:** System and Method for an Encrypted Data Bus
- **USPTO # 19/658,572:** System and Method for Encrypted Keyboard Events
- **USPTO # 19/561,246:** System and Method for Secure Communication via Disposable Encoding Maps
- **USPTO # 19/574,352:** System and Method for Secure Asynchronous Data Communication
- **USPTO # 19/645,192:** Method and Apparatus for Accelerated Prime Number Generation via Modular Signal Analysis

IV. FINANCIAL ACCOUNTABILITY & MANDATORY PROCUREMENT AUDIT

Because the United States Government holds a native, perpetual, zero-cost license to implement and deploy these high-radix and optical communication architectures, it cannot legally be billed for these specific technical optimization methods.

If NVIDIA Corporation or Intel Federal LLC are integrating high-radix array optimization methods or parallel optical routing logics within classified defense data fabrics to meet CDAO metrics, the Department is structurally paying a commercial premium for an asset it already holds a free, perpetual right to utilize.

This notice is framed in a constructive, protective posture designed to safeguard the fiscal integrity of the defense industrial base. A formal procurement audit is required to confirm that prime contract pricing models are adjusted down to reflect the government's existing non-exclusive license rights, preventing systemic cost-accounting deficiencies.

V. AMENDED NOTICE OF POTENTIAL RETALIATORY MECHANISMS

Pursuant to public records within the 387th District Court of Fort Bend County, Texas (Cause No. 25-DCV-328122) and escalated before the Supreme Court of Texas (Cause No. 26-0511), a critical chronological alignment remains active between the submission of federal administrative protections and the deployment of local penal mechanisms.

Following past formal DFARS submissions to defense leadership, highly irregular, extrajurisdictional interventions materialized in local domestic relations tracks, culminating in service evasion, manual docket changes, and pocket warrants designed to compel the physical surrender of corporate computing hardware containing the primary source-code keys to these patent applications.

Because these private adversarial actors intersect directly with logistical and analytical infrastructures managed across prime defense frameworks, any un-audited attempt to compromise the physical computing hardware holding these cryptographic keys introduces a severe risk of unauthorized technology transfer and a direct threat to a pre-licensed federal asset. Loop-in visibility from congressional and administrative oversight circles is required to ensure these dynamics do not cause structural or financial spoliation.

VI. DATA PRESERVATION & INGESTION LOGISTICS

To guarantee that the complete contents of this claim are accurately preserved within a durable federal repository

without network formatting bottlenecks, select text compendiums are attached directly to this transmission in Plain Text configuration. This ensures flawless ingestion by the Pentagon's automated email auditing and compliance archiving networks. The complete, unredacted PDF editions of these volumes containing all stamped court instruments, automated receipts, and certified tracking sheets can be accessed free of charge at the designated sovereign download portals: https://www.Capias-F35.US/ and https://www.isbn9781971481296.com.

All legal, civil, and statutory rights remain explicitly reserved.

Respectfully submitted,
Reinaldo J. Aguiar Marcano

RE: UNIFIED ADMINISTRATIVE PATENT INFRINGEMENT CLAIM CONCERNING MOBILE, PORTABLE, AND VIRTUAL REALITY HARDWARE/ SOFTWARE PROCUREMENTS ACROSS THE DoD ENTERPRISE SOFTWARE INITIATIVE (ESI) AND ARMY CHESS CONTRACT VEHICLES

Dear Directors, Procuring Contracting Officers, and Oversight Authorities:

This formal administrative claim is executed and served upon you in your official capacities pursuant to the **Defense Federal Acquisition Regulation Supplement (DFARS) 227.7004**. The purpose of this verified transmission is to place the United States Government on notice of structural procurement irregularities and potential systemic patent infringement involving active enterprise computing contracts.

To ensure administrative balance and avoid single-point communication friction, this claim is deliberately load-balanced across the senior procurement leadership of the **DoD Enterprise Software Initiative (ESI)** and **Army Computer Hardware, Enterprise Software and Solutions (CHESS)**, bypassing prior local filing nodes while establishing an immutable, cryptographically timestamped federal repository of notice.

Procedural Nuance on Recipient Distribution:
Pursuant to the mandates of DFARS 227.7004, the **TO** line of this claim is strictly restricted to the warranted Procuring Contracting Officers (PCOs) and Program Directors who possess the operational authority to mandate an administrative audit or freeze disbursements. The affected commercial entities (Apple, Microsoft, Google, Meta) and their prime systems integrators (such as SAIC) are positioned strictly in the **CC** line. This ensures absolute "Actual Knowledge" is conferred under **35 U.S.C. § 154(d)** without diluting the mandatory administrative obligations placed upon the federal client.

I. THE JURISPRUDENTIAL PRAGMATISM: PERPETUAL LICENSE GRANT VS. CONTRACTOR MISAPPROPRIATION

Under standard operating parameters governed by **28 U.S.C. § 1498**, the United States Government possesses an eminent domain right over domestic intellectual property, shielding its vendors from civil injunctions while assuming financial liability for infringement.

However, this specific administrative claim introduces a critical, non-frivolous optimization: the primary inventor of the *Aguiar Marcano Intellectual Property Portfolio*—compiled within *The Architecture of Control* (**ISBN 978-1-97-148129-6**)—has proactively executed an **irrevocable, perpetual, world-wide, no-fee license grant** directly to the United States Federal Government and its military components for all national defense and intelligence operations.

Consequently, the U.S. Government owes **zero royalties or licensing fees** for the native utilization, implementation, or deployment of these secure architectures.

The structural irregularity shifts entirely to the targeted defense contractors and systems integrators:

- **Apple Inc., Microsoft Corp., Google LLC, and Meta Platforms, Inc.** actively manufacture, configure, and license the primary mobile devices, laptops, desktop operating systems (macOS, iOS, Windows, Chrome OS, Android), and virtual reality (VR) hardware/software suites utilized across the Department of Defense.
- Systems integrators, specifically **Science Applications International Corporation (SAIC)**, package, bundle, and deliver these commercial off-the-shelf (COTS) devices to the warfighter through multi-billion-dollar enterprise contract vehicles like the **DoD ESI** and **Army CHESS** frameworks.

If these targeted contractors are embedding the research, development, or implementation costs of hardware-level parallel features, secure data fabric connectivity, or cryptographic primitives covered by the Aguiar Marcano portfolio into their federal delivery scales, **they are charging the American taxpayer for intellectual property that the U.S. Government already owns for free.**

This claim is framed constructively. This is not an attack on the technical capabilities of Apple, Microsoft, Google, Meta, or SAIC; rather, it is a **proactive measure to protect their corporate reputations and the integrity of federal procurement.** Conducting a comprehensive procurement audit is in the best interest of all parties to ensure transparency, insulate the agencies from secondary compliance liabilities, and secure immediate cost-mitigation discounts on active hardware and software rollouts.

II. TECHNICAL CONNECT-THE-DOTS: PATENT PROFILES AND SYSTEMIC NEXUS

The targeted hardware delivery streams intersect directly with the core claims of the Aguiar Marcano portfolio. Because the executive leadership of the target entities possesses an elite technical background, this claim provides a detailed granular breakdown of the specific technological touchpoints encumbered by these patents.

1. USPTO # 19/571,566: METHOD AND SYSTEM FOR DE-ANONYMIZING RADIO FREQUENCY SIGNALS VIA A *DISTRIBUTED SENSOR ARRAY*

Target Systems: Apple iOS, Google Android, and Microsoft Windows mobile network stacking, baseband processors, and location-services infrastructure integrated across DoD mobile deployments.

The Nexus: Modern military operations rely heavily on the anonymity of cellular and mobile data packet routing. If an adversary covertly injects localized signal-monitoring frameworks into the consumer supply chains of these primary mobile operating systems, they can track device coordinates using nanosecond-level Time of Arrival (ToA) differentials. This patent explicitly claims the decentralized architecture required to identify, isolate, and neutralize these hidden de-

anonymization grids. Any enterprise mobile endpoint deployed via SAIC that utilizes dynamic cell-site signal triangulation or baseband monitoring directly intersects this sovereign defense framework.

2. USPTO # 19/560,042: METHOD AND SYSTEM FOR HIGH-BANDWIDTH, FREE-SPACE OPTICAL DATA EXCHANGE BETWEEN MOBILE DEVICES

Target Systems: Meta/Oculus Virtual Reality (VR) hardware/software architectures, Apple Silicon (M-series/A-series) hardware fabrics, and high-speed device-to-device local file sharing protocols (e.g., AirDrop, Nearby Share).

The Nexus: To bypass traditional, interceptible radio-frequency (RF) channels in contested operational environments, tactical mobile units and virtual reality headsets require high-bandwidth, short-range, unguided free-space optical connections. This patent protects the specific data-link layer mechanics where data is encoded as a rapid sequence of multi-wavelength light frames utilizing "channel elements" (logical super-pixels) to remain robust against physical movement, focus drift, and angular misalignment. Meta's advanced wireless VR data-streaming protocols and Apple's proximity-based file transfer fabrics direct mirror this spatial light architecture.

3. USPTO # 19/559,608: METHOD AND SYSTEM FOR A GEO-INDEXING COVERT LEDGER

Target Systems: macOS, iOS, Windows, and Android secure core storage subsystems, enterprise mobile device management (MDM) platforms, and SAIC-integrated secure database solutions.

The Nexus: Secure information logging across distributed military networks requires data persistence without relying on centralized, capture-prone relational databases. This patent defines a "DIOSDADO" geo-index architecture where data payloads and transaction parameters are steganographically embedded into geographical and spatial index registries by applying mathematical transformations (such as out-of-range coordinate scaling). Operating systems and secure storage solutions utilizing location-anchored cryptographic metadata blocks directly deploy this pre-licensed infrastructure.

4. USPTO # 19/645,194: A SYSTEM FOR CRYPTANALYSIS BASED ON PARAMETRIC DENOISING OF A PUBLIC KEY

Target Systems: Apple macOS, Windows 11, Chrome OS, and enterprise software security layers deployed via DoD ESI.

The Nexus: Traditional public-key cryptography (RSA, ECC) implemented across commercial operating systems treats key validation as a brute-force numerical sequence. This patent

introduces a paradigm shift by processing public keys as complex, noisy signals and applying parameterized modular filters to isolate and eliminate mathematical "impossible overlaps." Any system-level cryptographic authentication kernel utilizing signal-processing denoising or modular pattern-matching heuristics to accelerate key validation or cryptanalysis is encumbered by this portfolio.

III. NOTICE OF POTENTIAL RETALIATION AND DATA SPOLIATION RISKS

Warranted Contracting Officers are formally alerted to a synchronized chronological pattern of extrajudicial duress that has emerged immediately following prior DFARS submissions to the Pentagon. On the business day following the execution of administrative claims regarding Lockheed Martin, Palantir, and Anduril, highly irregular civil court maneuvers were initialized within the 387th District Court of Fort Bend County, Texas (Case No. 25-DCV-328122), culminating in the manual, ad-hoc alteration of digital docket timestamps via the Tyler Technologies Odyssey infrastructure.

These localized enforcement actions—aimed at executing a forced physical conversion of corporate computing hardware holding source-code infrastructure—suggest an asymmetric retaliatory mechanism deployed to disrupt the federal reporting line. Because the U.S. Government maintains a direct property interest in these pre-licensed technologies, any coercive attempt to restrict the inventor or compromise corporate hardware directly threatens national defense procurement sovereignty. This context is fully detailed in the accompanying records submitted before the Supreme Court of Texas under Cause No. 26-0511.

IV. ENCLOSURE AND DATA PRESERVATION LOGISTICS

To ensure that the extensive clinical data verifying these procurement risks is accurately ingested into the Pentagon's automated archival and email auditing compliance systems without network formatting bottlenecks, **all published compendiums are deliberately attached to this verified email in lightweight, unredacted Plain Text (.txt) format.**

The complete, stamped PDF editions comprising official court instruments, eFiling verification receipts, and electronic registers of actions can be accessed and downloaded free of charge by visiting the following permanent repositories:

- *The Capias and the F-35 Program* (Full PDF): https://www.isbn9781971481296.com
- *Inventions Portfolio & Letter of License Grant* (Full PDF): https://www.Capias-F35.US
-

SCHEDULE OF ATTACHED ENCLOSURES:

- **01__DFARS-227.7004-Lockheed-Martin.pdf** (Certified Copy of Prior Administrative Filing)
- **02__DFARS-227.7004-Plantir-and-Anduril-Industries.pdf** (Certified Copy of Prior Administrative Filing)

- **07__USPTO_Application_Atomic-Express-Logistics-System.pdf** (Core High-Radix Mesh Control Specifications)

V. MANDATORY ADMINISTRATIVE ACTION REQUIRED

As warranted Procuring Contracting Officers managing billions of dollars in active COTS hardware and software procurement cycles, the delivery of this DFARS claim strips your respective commands of "plausible deniability."

Pursuant to federal acquisition regulations, you are hereby mandated to:

- **Initialize an immediate administrative review** and cost-accounting audit of all active hardware, operating system, and VR platform delivery structures provided by Apple, Microsoft, Google, Meta, and SAIC.
- **Halt the assumption of clear title** or final execution of upcoming product refreshes that incorporate the pre-licensed parametric, free-space optical, or signal-denoising architectures without an audited price adjustment.
- **Forward this comprehensive brief immediately** to the Chief of the Intellectual Property Law Division (JALS-IP) within your respective military branches for formal inter-agency tracking.

Govern yourselves accordingly.

Respectfully submitted,

Reinaldo Aguiar Marcano

REGISTERED EMAIL™ | CERTIFIED DELIVERY

This is a Registered Email™ message from **RJ Aguiar**.

Dear Mr. Stanley, Secretary Hegseth, and Mr. Michael:

This comprehensive administrative and technical disclosure is officially executed and served upon you in your formal capacities within the United States Department of Defense (DoD). This document constitutes a new, unified **Formal Administrative Claim for Patent Infringement under DFARS 227.7004**, a **Notice of Perpetual No-Fee License Grant**, and a formal **Notice of Potential Retaliatory Mechanisms** intersecting with critical defense procurement infrastructure.

I. Formal Administrative Claim under DFARS 227.7004: JADC2 Tactical Nexus

We formally allege that the Joint All-Domain Command and Control (JADC2) architectures, satellite communications, troposcatter modules, point-to-point radio frequency (RF) frameworks, and cryptographic data fabrics currently being commercialized and deployed by **Lockheed Martin Corporation**—and integrated alongside cloud architectures managed by **Microsoft Azure**, **Amazon AWS**, **Palantir Technologies**, and **Anduril Industries**—directly infringe upon the foundational patent applications compiled within the Aguiar Marcano Intellectual Property Portfolio (ISBN 9781971481296).

The targeted procurements natively intersect with the following core tracks of the **JADC2 data fabric** and distributed telecommunications arrays:

A. The Cryptographic Paradigm Shift: Elimination of the "Key-First" Bottleneck

Modern tactical networks are fundamentally constrained by sequential, "key-first" handshakes (e.g., traditional TLS/SSL frameworks), making them highly vulnerable to real-time Man-in-the-Middle (MITM) interception and traffic analysis. The following inventions completely render the legacy binary "key-first" paradigm obsolete by decoupling the data payload from synchronous key exchanges:

- **USPTO # 19/645,371 (Secure Communication via Receiver-Generated Key Seeds):** Inverts the traditional key exchange by having the intended receiver generate and push single-use key seeds over an uplink, ensuring the final message encryption key is never transmitted across the vulnerable downlink channel.

- **USPTO # 19/640,945 (Asynchronous Secure Communication with Post-Hoc Key Derivation):** Breaks temporal predictability by splitting transmissions into three asynchronous parts (Prefix, Message, Suffix) across separate paths, deriving the final decryption key post-hoc only after complete block concatenation.
- **USPTO # 19/658,570 (Geographical and Orientation-Based Encryption Seeds):** Utilizes real-time GNSS coordinates and IMU digital compass orientations relative to Magnetic North as continuous, high-fidelity physical entropy sources to generate keys immune to timestamp-based prediction.
- **USPTO # 19/640,973 & # 19/561,259 (Secure Parametric Network Protocol with Rotating Encoding Maps):** Enforces end-to-end forward secrecy across routed, multi-hop networks by utilizing disposable, time-variant encoding maps that rotate mid-session based on packet thresholds, preventing retrospective decryption of captured traffic.
- **USPTO # 19/658,572 (System and Method for Encrypted Keyboard Events):** Encrypts each individual keystroke event independently as a distinct ciphertext, defeating acoustic side-channel leaks and machine-learning-driven text structure analysis.

B. High-Radix, Post-Binary Tactical Communications

- To bypass the bandwidth and physical bottlenecks of serial binary serialization, the following technologies define a native, high-radix physical and data-link layer, processing abstract mathematical "recipes" and symbolic multi-state signals instead of standard bits:
- **USPTO # 19/639,265 (High-Radix and Parametric Satellite Communication System):** Modulates Earth-to-space and space-to-Earth RF links into N discrete, distinguishable physical states ($N > 2$) to optimize satellite transponder throughput.
- **USPTO # 19/639,272 (Adaptive High-Radix and Parametric Troposcatter Communication System):** Dynamically adjusts the channel radix (N) in real-time based on tropospheric fading and multipath metrics, scaling data density constructively.
- **USPTO # 19/639,255 (High-Radix and Parametric Cellular Communication System):** Implements post-binary symbolic data transport across wireless cellular segments natively.
- **USPTO # 19/639,258 (High-Radix and Parametric Point-to-Point RF Communication System):** Establishes fixed, line-of-sight wireless backhaul links operating on high-cardinality symbol maps.
- **USPTO # 19/638,466 (Secure Communication Using Covert Side-Channels Embedded in a High-Cardinality Stream):** Embeds logical side-channels (e.g., spatial positioning) within a primary optical or RF stream, phase-shifting key data relative to the primary payload via a pseudo-random offset.

C. Advanced Cryptanalysis, Data Logistics, and Signal De-Anonymization

- **USPTO # 19/645,192 (Accelerated Prime Number Generation via Modular Signal Analysis):** Partitions massive integer space into shards, mapping remainders to multi-state digital signals to detect "prime oases" and accelerate key generation.
- **USPTO # 19/645,194 (Cryptanalysis Based on Parametric Denoising of a Public Key):** Treats a public key as a noisy signal, applying parameterized modular filters to eliminate "impossible overlaps" and rapidly isolate prime factors.
- **USPTO # 19/559,656 (Covert Communication via Satellite Vision Systems):** Utilizes synchronized ground arrays to embed data-rich visual patterns directly into the imagery captured by non-cooperative orbital observation platforms.
- **USPTO # 19/559,972 (Communication via Passive Reflection from Non-Cooperative Orbiting Objects):** Employs an automated kinematic engine to map Low Earth Orbit (LEO) satellite trajectories, using their physical chassis as passive RF mirrors to bounce over-the-horizon signals without their active participation.
- **USPTO # 19/559,608 (Method and System for a Geo-Indexing Covert Ledger):** Formulates an identity-agnostic distributed ledger by encoding transactional units as out-of-range coordinate transformations mapped directly to public real estate metadata.
- **USPTO # 19/571,566 (De-Anonymizing Radio Frequency Signals via a Distributed Sensor Array):** Analyzes Time of Arrival (ToA) differentials across an array of passive sensors to derive precise directional vectors, matching transmissions with telecom provider event logs to de-anonymize encrypted streams.

II. Notice of Perpetual, Irrevocable Grant to the U.S. Federal Government

As explicitly hardcoded within the legal text of the underlying patent applications (compiled under ISBN

9781971481296), the Primary Inventor has proactively executed a **perpetual, irrevocable, worldwide, royalty-free, non-exclusive license grant** to the United States Federal Government and its defense and national security components for all sovereign defense purposes.
Because the U.S. Government possesses an absolute, zero-cost right to practice, implement, and deploy these high-radix and parametric cryptographic architectures natively, the financial implications for the national defense budget are substantial. The Department is legally unencumbered by private commercial royalty streams for any systems utilizing these "recipes" for JADC2 data-routing optimization.

III. Notice of Potential Retaliatory Mechanisms & Sovereign Interception Risks

Pursuant to the clinical logs detailed in *"The Capias and the F-35 Program"* (ISBN 9781105250286), a severe chronological alignment exists between the submission of formal DFARS disclosures and the immediate deployment of localized penal mechanisms.

Chronological Causality Tracking: On April 17, 2026, the Primary Inventor transmitted formal DFARS 227.7004 claims to the Pentagon. On the immediate next business day (April 21, 2026), adversarial counsel representing local domestic relations tracks abruptly accelerated a highly anomalous property discovery track. This track explicitly targeted the forced conversion and physical surrender of the independent corporate computing hardware containing the primary source-code keys to these exact patent applications.

Because these private actors are deeply intertwined with cloud, analytical, and logistics infrastructure managed across prime defense contractors—including **Palantir**, **Anduril**, **Lockheed Martin**, **Microsoft Azure**, and **Amazon AWS**—any un-audited attempt to seize or compromise the physical hardware holding these cryptographic source keys introduces a severe risk of data spoliation, unauthorized tech-transfer, and a direct threat to the financial and technological sovereignty of the U.S. government's pre-licensed asset.

IV. Constructive Requisition for a Procurement Audit

This notice is submitted in a constructive, non-adversarial posture designed explicitly to safeguard the integrity of the Department, the taxpayers, and the defense industrial base. It is in the shared interest of all stakeholders—including the defense primes—to ensure complete regulatory clarity.

If prime contractors are embedding the research, development, or licensing costs of these high-radix, post-binary, or asynchronous communication mechanisms into multi-billion-dollar federal procurement tracks, the government is effectively being billed for intellectual property it already holds a free, perpetual license to utilize.

Therefore, we respectfully request that the **Chief Digital and Artificial Intelligence Office (CDAO)**, alongside the **Intellectual Property Law Division (JALS-IP)**, initiate a targeted procurement audit of active JADC2 and communication modernized contracts to verify cost-accounting lines, enforce compliance with the government's native license, and protect the public archives from asymmetric exploitation.

Respectfully submitted,

Reinaldo J. Aguiar Marcano
Primary Inventor / Relator Pro Se

EXHIBIT E-9

SIGNED STATE COURT ORDER FOR CAPIAS AUTHORIZING PHYSICAL RESTRAINT OF PETITIONER

(REDACTED/FLATTENED/COMPRESSED RECORD)

DATED MAY 15, 2026

Filed
5/14/2026 9:50 AM
Beverley McGrew Walker
District Clerk
Fort Bend County, Texas
[redacted]

[redacted]

NO. 25-DCV-328122

IN THE MATTER OF [redacted]	§	**IN THE DISTRICT COURT**
AND	§	**387TH JUDICIAL DISTRICT**
REINALDO J. AGUIAR MARCANO	§	
AND IN THE INTEREST OF [redacted]	§	**FORT BEND COUNTY, TEXAS**

ORDER FOR CAPIAS AND SETTING OF BOND

On May 14, 2026, the Court heard Petitioner's Motion for Enforcement of [redacted] Petitioner appeared and requested that a capias be issued for the arrest of Respondent for failure to appear.

The Court, after reviewing the pleadings and hearing the argument of counsel, finds that this matter was duly and properly set for hearing on May 14, 2026 at 9:00 a.m. at 1422 Eugene Heimann Cir., Richmond, Texas, 77469, and that Respondent failed to appear.

The Court further finds that Respondent was personally served with a timely order to appear at the above time, place, and date.

The Court further finds that the request for writ of capias should be granted.

IT IS ORDERED that the clerk of this Court issue a writ of capias, directed to the sheriff or any peace officer of any county within the state of Texas, commanding that sheriff or peace officer to take the body of Reinaldo J. Aguiar Marcano,

ROUTED TO COURT
RT'D TO D. CLERK 05/22/2026 atb

Respondent, and bring him before this Court to answer the allegations of the enforcement petition or motion previously served on Respondent.

IT IS ORDERED that the detaining authority shall notify the Court of Respondent's arrest immediately following Respondent's arrest.

IT IS ORDERED that Respondent shall be permitted to post a cash bond only of two thousand and five hundred and 00/100 dollars ($2,500.00), such sum to be deposited in the registry of this Court and subject to forfeiture in accordance with law if Respondent fails to appear for hearing on the court date following release from custody.

If Respondent attempts to post bond, IT IS ORDERED that the detaining authority contact the Court before Respondent's release to determine the date and time of the hearing and include such information in the bond conditions.

SIGNED on 5/14/2026

EXHIBIT E-10

PETITIONER'S SECOND SUPPLEMENTAL BRIEF

UNDER RULE 15.8

(SIGNED ORIGINAL RECORD MATTERS, PAGES

7–9)

FILED IN THE SUPREME COURT OF THE

UNITED STATES

(CASE NO. 26-186) ON AUGUST 19, 2026

No. 26-186

IN THE SUPREME COURT OF THE UNITED STATES

IN RE REINALDO J. AGUIAR MARCANO,
Petitioner Pro Se.

PETITIONER'S SECOND SUPPLEMENTAL BRIEF UNDER RULE 15.8 CALLING ATTENTION TO INTERVENING REGULATORY DISCLOSURES

Petitioner Reinaldo J. Aguiar Marcano, proceeding pro se, respectfully submits this **Second Supplemental Brief under Supreme Court Rule 15.8** to call the Court's attention to critical, new intervening regulatory matters that occurred after the filing of Petitioner's first Supplemental Brief on August 12, 2026.

Pursuant to Rule 15.8, this brief does not replace or supersede Petitioner's prior Supplemental Brief, but supplements the record to notify the Court of an escalating macro-financial and national security crisis that directly impacts the pending extraordinary Habeas Corpus proceeding.

On August 19, 2026, Petitioner submitted a formal Securities Fraud Complaint (Form TCR) with the **United States Securities and Exchange Commission (SEC) Office of the Whistleblower**, which was officially accepted and docketed under **TCR Submission Number 17871-492-823-882**.

This SEC whistleblower disclosure formally targets major financial institutions—specifically JP-Morgan Chase & Co., The Goldman Sachs Group, Inc., and Morgan Stanley & Co. LLC—concerning systemic fiduciary breaches, material Regulation S-K omissions, and illegal stock buybacks on their own shares while holding actual, certified, and written knowledge of the multi-billion-dollar pend-

ing administrative patent-infringement claims (DFARS 227.7004). This disclosure and its underlying chronological records show that the trial court's Capias proceedings—which gave rise to the constructive custody currently under this Court's Habeas Corpus review—were initiated exactly two (2) business days after Petitioner submitted his formal DFARS claims to the Department of Defense.

Petitioner has formally and cryptographically notified these target institutions, as well as the **United States Secretary of the Treasury (Scott Bessent)** on April 1, 2026 (via FedEx Tracking No. 380069718190) and July 1, 2026, and the **United States Secretary of Defense (Pete Hegseth)** on June 5, 2026 (via registered, cryptographically verified electronic transmittal), of these material, index-disrupting liabilities and the related federal license grants. Continuing to execute share repurchases of their own stock and recommend unhedged retail purchases of targeted public defense issuers while suppressing this active, Cabinet-level and Department-level notice from public filings violates Section 206 of the Investment Advisers Act of 1940 and federal securities laws.

Petitioner submits this Second Supplemental Brief to demonstrate that the extrajudicial state-court campaign targeting his physical liberty is directly linked to the systemic, bad-faith attempt by private defense and financial actors to suppress these cabinet-level regulatory disclosures—demonstrating that the exigent national security and macroeconomic circumstances of this case merit prioritizing its review, as well as conducting appropriate due diligence and administrative checks with the federal regulatory agencies and cabinet-level departments mentioned herein.

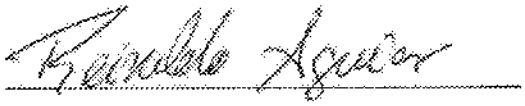

Respectfully submitted,

Reinaldo Javier Aguiar Marcano, Petitioner Pro Se
Correspondence Address:
